BY

W I L L I A M H U N T E R,

PHYSICIAN EXTRAORDINARY TO THE QUEEN, PROFESSOR OF  
ANATOMY IN THE ROYAL ACADEMY, AND FELLOW OF THE  
ROYAL AND ANTIQUARIAN SOCIETIES.

PRINTED AT BIRMINGHAM BY JOHN BASKERVILLE, 1774.

SOLD IN LONDON BY S. BAKER AND G. LEIGH, IN York-Street; T. CADELL IN THE Strand; D. WILSON AND G. NICOL,  
OPPOSITE York-Buildings; AND J. MURRAY, IN Fleet-Street.

# T O      T H E      K I N G.

S I R,

THIS work had no other claim to the honour with which it is distinguished by YOUR MAJESTY, than as it illustrates one part of science hitherto imperfectly understood, and as it contains the foundation of another part of science, on which the lives and happiness of millions must depend. It gave me an heart-felt satisfaction, to observe how much this consideration recommended it to ROYAL PATRONAGE.

When respect, reverence, and gratitude rise to a certain degree, and the occasion is public and solemn, the freedom of language is restrained: and I should be guilty of an abuse of that gracious condescension, with which I am honoured, were I to attempt to express by words the sentiments of my heart. But, for the sake of those, who, placed at a distance from the ROYAL PRESENCE, may be more able to serve the public, than I have been, let me be permitted to say, that, although to acquire knowledge, and to communicate it to others, has been the pleasure, the business, and the ambition of my life; yet, since I have had the honour to be a servant in YOUR ROYAL HOUSE, I have felt an additional incitement to assiduity, being convinced that an unremitting endeavour to be useful to society, is the readiest, and the most certain way to the favour of our SOVEREIGN.

That the peculiar blessing of this country, the influence of a KING who sincerely wishes to encourage every improvement, a KING who takes a part with all his subjects in their happiness, and in their distress, may be long preserved to us, is the fervent prayer of,

S I R,

Y O U R   M A J E S T Y ' S

most faithful Subject,

and most dutiful Servant,

WILLIAM HUNTER.

## PRO O E M I U M.

Q UOD omnes fere homines, in studiis scientiarum versati, diu multumque desiderarunt, linguam scilicet per universum terrarum orbem cognitam atque perceptam, id nobis ex parte aliqua suppeditat tabularum ænarrarum sculptura, ad veras rerum formas exhibendas adprime accommodata. Imo hujusce artificii ea est utilitas, ut in naturæ explicacione sèpè numero plus valeat quam quævis verborum copia, aut vis dicendi. Quodcumque enim oculo fideli inde subjicitur (specet modo aliquis argumenti haud ignarus) animo confitim arripitur, memorieque alte impressum haud proflus excidit. Lentior sermonis mora, et vis hebetior.

Proinde ex quo tempore hoc artificium usibus hominum communiter inservi, via brevior faciliorque patefacta est ad inventa quælibet tum divulganda, tum conservanda; et rerum simul naturalium cognitionis, ab exiguis profecta initii, paulatim eo usque increvit, ut seculi hujusce, omnium ornatissimi, summum fere ornamentum jam tandem extiterit.

Cæterarum artium incrementa, æquis faltem passibus, comitata est anatomia. Etenim non pauci recentiorum, viri excellentes ingenii atque judicij, labore plurimo, nec minori solertia, corporis humani tum fabricam tum econiam perverstigant. Ex his plurimi artem hanc graphicam ancillantem sibi adhibuerunt; præcipuisque inde reperitis suis feliciter illustratis, effecerunt, ut ars anatomica, hominum generi, si qua alia, utilis et fructuosa, intellectu simul facilius fieret.

Restabat tamen pars una humani corporis, eaque five structuræ suæ perelegans, five muneric officiique ratione, primas tenens, a disciplina hujus professoribus non satis explorata. Restabat scilicet uterus humanus. Abfit vero, ut viris hisce egregiis virtus detur, quod rem quasi neglectam habuerint, cuius penitus perspicienda copia rara erat et infrequens. Paucissim enim contigerit necesse est, ut tot cadavera fecerint, quot ad conditionem uteri gravidi, variis temporibus variam, perverstigandam, nedum demonstrandam, sufficerent. De aliis itaque silentium, ubi laudare nefas. Quod ad auctorem attinet, anno ille primum MDCCCLI. felici usus est occasione id in humano corpore explorandi, quod in brutis jam olim quæsiverat. Mulier quedam, graviditatis suæ mensibus prope exactis, repentinam obierat mortem. Cadaver, adhuc integrum, cultro subiectum est. Operi favit tempes-tas. Cera, vasis rite injecta, voto respondit. Repertus est pictor, vir ille in suo genere adprime solers. Partes singulæ, multis coram atlantibus, exploratae sunt atque excusæ, ut omnis rei veritas firma satis auctoritate comprobari posset atque stabiliti.

Sub his auspiciis, aliquot mensum spatio decurso, decem primæ tabulæ perficte delineatae fuerant; partes ipsa identidem publice exposita; et ea quæ de singulis animadverba fuerant, ac notata, palam dicta. Auctoris inde animum subiit, se rem disciplinæ hujusce fautoribus haud ingratam facturum, si historiam uteri gravidi anatomiam edereret, his decem tabulis illuminatam. Consilium placuit. Opus in manus artificum, maxima laude florentium, traditum est; et pecunia collatitia plurimis pro more repræsentata.

Alterum interea cadaver in manus incidit, quod quidem, coeli licet tempestas minus jam anatomicæ amica esset, haud nullo in pretio habendum fuit; quandoquidem huic acceptæ referuntur figure aliquot, ab hoc instituto haud alienæ, dignæque adeo viæ, quæ operi, supplemento loco, adjicerentur. Dum autem super his operam navabat sculptor, en tertium cadaver, quam opportune! Etenim illud non modo quædam, prius obscura, luci dedit, sed novis etiam figuris adordans materiam aptissimam subministravit.

Cum auctor huic se accingebat negotio, animo destinavit decem tabulas, modo dictas, in lucem proferre, jactum quasi aliquod fundamen-tum, cui alia plura, de hac parte anatomicæ, postea adjicere ac superstruere sperabat, si quando per otium ipsi licet hanc rem altius investigate.

## P R E F A C E.

*T*HE art of engraving supplies us, upon many occasions, with what has been the great desideratum of the lovers of science, an universal language. Nay, it conveys clearer ideas of most natural objects, than words can express; makes stronger impressions upon the mind; and to every person conversant with the subject, gives an immediate comprehension of what it represents.

*From the time when this art came more generally into use, it has been much more easy both to communicate and to preserve discoveries and improvements; and natural knowledge has been gradually rising, till it is at length become the distinguishing characteristic of the most enlightened age of the world.*

*Anatomy has, at least, kept pace in improvement with the other branches of natural knowledge. Many of the moderns, through much labour and patience, as well as ingenuity and judgment, have thrown considerable lights upon the structure and operations of the human body; and they have particularly by engravings, made the study of that art, in which humanity is so much interested, both more easy and pleasant. Most of the principal parts of anatomy have, in this manner, been successfully illustrated.*

*One part however, and that the most curious, and certainly not the least important of all, the pregnant womb, had not been treated by anatomists with proportionable success. Let it not, however, be objected to them, that they neglected what in fact it was rarely in their power to cultivate. Few, or none of the anatomists, had met with a sufficient number of subjects, either for investigating, or for demonstrating the principal circumstances of uterogenesis in the human species. But let what cannot be praised, in others, be passed over in silence. With respect to the present undertaking, in the year 1751 the author met with the first favourable opportunity of examining, in the human species, what before he had been studying in brutes. A woman died suddenly, when very near the end of her pregnancy; the body was procured before any sensible putrefaction had begun; the season of the year was favourable to dissection; the injection of the blood-vessels proved successful; a very able painter, in this way, was found; every part was examined in the most public manner, and the truth was thereby well authenticated.*

*In the course of some months, the drawings of the first ten plates were finished, and from time to time the subject was publicly exhibited, with such remarks as had occurred in the examination of the several parts. Many lovers of this study approved of the author's proposal to publish the anatomy of the gravid uterus, illustrated by those ten plates: the work was immediately put into the hands of our best artists; and subscriptions were received.*

*In the mean time a second subject was procured, which, though the weather happened to be very unfavourable, afforded a few supplemental figures, of importance enough to be taken into the work. And before the engravings were finished, a third subject occurred very opportunely, which cleared up some difficulties, and furnished some useful additional figures.*

*The original plan having been only to publish the first ten plates, as a ground-work for farther improvements in this branch of anatomy, to be added whenever good opportunities should be offered, the author now began to entertain hopes of being able to give a much more compleat work. He foresaw that*

## P R O O E M I U M .

vestigare. Jam vero majora quædam animo complecti, et etiam spem fovere ausus est, fore ut opus aliquod exadficare posset, quod ad perfectionem absolutionemque proprius perveniret. Prævidit enim, in hac urbe, tanta hominum multitudine reserta, annorum aliquot spatio, occasionem omnia ea quæ ad gravidum uterum pertinent, oblerandi viro, hoc agenti, haud fortasse defuturam; unde sibi facultas dari posset aliquod quasi systēma condere, variaſque illas mutationes, ſingulis gravitatis mēſib⁹ proprias, figuris exprimere. Ejusmodi fere eſt hoc opus; quod, longo tempore promiſſum, tandem aliquando in medium prodiſ. Ut id fane ad exitum perduci posset, moras trahere necesse fuit, præter opinionem diurnas. Quoties autem auctor ſecum reputat has moras operi minime inſtruſtas fuſſe, abunde ſentit, quo ſe conſoletur.

Quod autem hoc argumentum illuſtrandi uni alicui mortali tam pulchra occaſio toties obtierit, in cauſa fuerunt tum varii caſus, tum amicorum multorum gratifima ſubſidia. Tabularum harum ultima ē manu artificis vix exceſſerat, cum datum fuit delineare embryonem mole minorem, quam quem anteā vidiff̄e auctori unquam contigerat; et haud ita pridem *conceptus* in tuba fallopiana, reſ hæc animadverſione egredie digna, figurarum numerum adauit. Hæc figuræ, et fi qua alia, ejusdem argumenti, occurſent, vel in tabula his adjicienda, vel cum uteri gravidi deſcriptione anatomica, quam auctōr ſecum meditatur, data occaſione, in publicum aliquando proferentur. Haſtenus quidem ipſi id otii non conveſſum eſt, quod ad hanc operis partem abſolvendam effet fatiſ. Quod fi caſu aliquo improviſo impeditus fuerit, quo minus id, quod cupiat, poſſit exequi, peruaſum ſibi habet, haud defuturum aliquem, huic muneri obeundo parem. Multi enim fūnt, qui auctōrem de hiſ rebus publice differentem ſe p̄ficiūt audierint; multi quoſ ille opinioñis ac ſententiaꝝ fuſe participeſ fecerit.

**F I G U R A R U M** fere anatomicarum duplex eſt et diversa ratio. Ab altera ſimplex rei imago, qualis oculo viſa eſt, talis delineatur. Altera, una cum viſis, etiam excogitaſ exhibet; nec tam ad oculum artificis, quam ad ingenuum memoriamque accommodatur. Prioris generis exempla apud *Bidloo* extant; poſterioris apud *Eustachium*.

Fieri non potest, quin figura iſta, quæ fit ex fideli naturæ imitatio-ne, et ex rei unius contemplatione enaſcit, in quibusdam ſepe partibus indiſtincta aut minus perfeſta eſſe videatur. Altera autem, ex ingenio nata, que autem non fit, niſi per laborem, et observationem et experientiam multiplicem, id uno intuitu videndum exhibet, quod fortalſe non niſi ex rerum varietate colligendum fuerat. Porro hæc eſt ea, quæ et meliorē ordinem, et compendium facilius, et maiorem perspicacitatem admittit. Alteram quidem contemplans oculus, eleganția ac concinnitate nature oblectatur: in altera, geometrici cuiusdam diagrammatiſ, accurati quidem exactiſ, ſed nudi, fed inornati ſimilitudinem agnoscit. Illa rem quamlibet ſpectatori, tanquam praefentem, ſubſicit, et dat *percipere*: hæc tantummodo deſcribenti vice fungitur, remque delineatam in animi conſpectu ponit. Prior autem poſteriori in hoc praefat maxime, quod ea, quæ revera viſa fūnt, exhibens, ſpeciem quandam veritatis præ ſe fert; et fit propemodum æque neſcia fallere, ac illud ipſum quod affimulatur.

De hoc opere, quod natura ipſius ſpeciem proponit, ali⁹ fortalſe aliud judicium ferent. Niſi enim auctōrem fallar, vana ſpes ſua atque opinio, multi ſunt apud quos ille nec censabitur operam inutilem poſuiffe, nec inepte erogatſ pecuniam; apud quos ſcilicet figurarum magnitudo, eleganția, ac varietas aliqua in laude ponentur. Contra, non deerunt, quibus magna pars ſumpſus ſupervacanea omnino atque inſtruſia fuſſe videbitur. Contendent ſcilicet operis hujus utilitatē ad plures poſuiffe pertingere, fi figura omnes in formam arctiorem contracit̄a fuſſent; fi ſculptura manu minus delicata fuſſet elaborata; fi aliquot etiam figuræ, utpote aliis non abſimiles, omnino omiſſe.

Cum autem figuræ, de quibus agitur, ea mente atque confilio fingi ſoleant, ut ab iis, quantum fieri potest, explicetur tam vera natura partium (nempe carum habitudo et ſtructura) quam forma externa, poſitura, ac nexus; magnitudo illis aliqua concedatur neceſſe eſt; aliter enim partes, ut aiunt, componentes haud fatis diſtincte delineari poſſunt. Quod ſi magnitudo rei propria ſculpturæ quo-dammodo apta fit ac conveniens, ea ipſa, utpote quæ obſervatu dignissima eſt, haud dubio eligenda eſt præcipue. His de cauſis figuræ omnes, quotquot hic proferuntur, ad juſtum naturas modum perfeſtæ fūnt, paucis tantum exceptis, quæ in formam naturali anguſtiorem coguntur,

## P R E F A C E .

that, in the course of ſome years, by diligence he might procure in this great city, ſo many opportunities of ſtudying the gravid uterus, as to be enabled to make up a tolerable ſyſtem; and to exhibit, by figures, all the principal changes that happen in the nine months of utero-geſtation. Such is the work which, at length, is offered to the public. The execution of it has indeed taken up more time, than what was at first expedited: but it gives the author no ſmall ſatisfaction to reflect, that the delay of publication has contributed not a little to the value of the work.

That one person ſhould have had ſo many opportunities of illustrating this ſubject, has been owing to fortunate circumstances, as well as to the affiſtance of many friends. Even ſince the laſt plate was finished, he had an opportunity of making a drawing of a younger embryo than he had before feen; and he has likewife made ſome figures from a very curious cafe, which he lately met with, namely a conception in the fallopian tube. These, and whatever may hereafter occur, he will offer to the public upon ſome future occaſion; probably in the way of a ſupplemental plate, or with the anatomical deſcription of the gravid uterus, which he propoſes to publish at full length. He has not hitherto had leſſure to finish that part of the work. But if he ſhould be prevented from doing it, by any unforeſeen accident, it will be in the power of many gentlemen of the profeſſion to do it for him, as he has conſtantly explained his obſervations on this ſubject in his public lectures.

**A N A T O M I C A L** figures are made in two very different ways; one is the ſimple portrait, in which the object is represented exactly as it was ſeen; the other is a repreſentation of the object under ſuch circumstances as were not actually ſeen, but conceived in the imagination. Bidloo has given us ſpecimens of the firſt kind; Euſtachius of the latter.

That figure which is a close representation of nature, and which is finiſhed from a view of one ſubject, will often be, unavoidably, ſomewhat indiſtinct or defective in ſome parts: the other, being a figure of fancy, made up perhaps from a variety of ſtudies after NATURE, may exhibit in one view, what could only be ſeen in ſeveral objects; and it admits of a better arrangement, of abridgement, and of greater precision. The one may have the elegance and harmony of the natural object; the other has commonly the hardneſſ of a geometrical diagram: the one ſhews the object, or gives perception; the other only deſcribes, or gives an idea of it. A very eſſential advantage of the firſt is, that as it repreſents what was actually ſeen, it carries the mark of truth, and becomes almost as inſallible as the object itſelf.

With regard to this work, which is a faithful repreſentation of what was actually ſeen, the judgement of the public will probably be divided. Many will approve of the labour and expenſe which have been beſtowed upon it, and commend the largeneſſ, elegance, and variety of the figures. Others will think that a great part of the expenſe might have been ſpared, and the work thereby rendered of more general uſe, if the figures had been made to a ſmaller ſcale, if the engraving had been leſſ finished, and if ſome of the figures, which are very familiar to others, had been omitted.

Anatomical figures being intended to ſhew, as much as poſſible, the true nature, that is, the peculiar habit and composition of parts, as well as the outward form, ſituation and connection of them, ſhould certainly be large; otherwise the smaller component parts can not be diſtinctly repreſented; and if the natural ſize of the object be tolerably fit for an engraving, that muſt be of all others the very best, as it has the advantage of ſhewing ſuch an important circumſtance. Upon these conſiderations, all the figures in this work were made of the natural ſize, except a few which were reduced in ſize, and one or two of minute objects which, on that account, were magnified.

For

P R O O E M I U M.

coguntur, nec non una atque altera ex rebus minutissimis, quas auctor idcirco amplandas curavit.

Iisdem etiam de causis confat hujuscemodi figuris deberi accuratiōnem quandam atque elegantiam. Profecto in pictura saepe fit, ut oculi levissima adumbratione oblectentur; maxime ubi vel ipsum tabulae argumentum adeo pervulgatum est, ut vis imaginandi facile excitetur, id, quocunque defuerit, statim adimpletura (ficti iis in tabulis, ubi hominum effigies, aut alias res, pariter note, exhibentur) vel ubi partes rerum minutiōres aciem pene oculorum fugiunt, ut ea in tabula chorographica, qua, propter distantiam suam, parum cernuntur. Sed in anatomia, ut et in rei naturalis historia, argumentum tabulae spectator vel omnino esse incognitum ponitur, vel non satis exploratum; parteque minime, pariter cum majoribus, studium diligentiamque requirunt. Operam quidem dare, ut summa arte elaborentur ea figurarum partes, per quas nihil, aut patum exprimitur, nisi quod prius sit expressum, hominis esset vehementer et opera sua et pecunia abundantis. Harum igitur figurarum pars maxima ultra mediocritatem perfecta est; aliquot summa expositione atque artificio ornata; leviora, vel ea quae prius fuerant aliqua ex parte illustrata, leviter tacta; ea vero quae secunda vice proferuntur, lineis fere exterioribus adumbrata.

Cuilibet homini, cui judicium sit paulo severius, in proclivi erit id auctori vitio dare, quod opus hoc haud satius justo ordine procederit, nec formam prestantem atque concinnam induat. Quod si illae difficultates, quotquot auctorem circumvenient, contemplatio fieri complexus, conamina haec, qualiacunque sint, animo magis aequo excipiet. In plurimiis aliis operibus, ad rem anatomicam quae spectant, veniam fibi haud facile impetrat vel defectus aliqua ex parte, vel materies confusa permisceque disposita. Quivis enim, si modo laborem pati decreverit, primum quidem exercitatione et experientia intimam argumenti sui cognitionem adipisci poterit; deinde autem operis cuiusdam, perfecti undique omnibusque numeris absoluti, formam atque imaginem animo effingere; et denique ex variorum cadaverum contemplatione rem institutam pro arbitrio suo ad exitum perdere.

Humani autem corporis uterum gravidum otiose secare paucis datum est. Pauci sunt, quibus, in omni vita spatio, nisi femel, aut etiam fortassis iterum hoc fuerit indulsum. Ponamus quidem talen occupationem, faustam omnino atque felicem, cultori cuiquam anatomiae esse oblatam; neccesse est ut continuo et fine mora de ratione illi instituti fixum aliquod certumque destinet; et uno eodemque tempore duo confilia, inter se non bene convenientia, prosequatur. Primum enim, ut ipse rem penitus perspectant habeat, cadaver sua manu fecet neccesse est; ita tamen instituta est investigatio, ut artifici simul adstanti, praecipuas partes commode delineandi plena sit copia. Proinde vix fieri potest, quin confilium, optimè suscepimus, immutari oporteat, variisque rebus accommodari que de improviso et præter expectationem possint occurrere. Ut autem id rite perfici possit, opus est longi temporis mora; partes interea aeri externo, inter pingendum, expositis plurimum detrimenti capient; praecipue si vir talis negotio obeundo preficit cui curae est, ne ficti quidpiam, aut ex memoria de prompti, ipsi rei veritati inducatur, et ut nihil ibi locum habeat, nisi quod ex natura ipsius observatione, re alia nulla intercedente, arreptum fuerit.

Si auctortot opportunitates, hanc ornandi provinciam, fibi prospexit futuras, quot ipsi bona sua fortuna inducerit, figuras ille quidem alias emendatores reddere potuisset; alias alii melius accomodate, et ita earum seriem in minorem numerum cogere. Figuras quidem nonnullas, jam delineatas, duasque tabulas, a sculptore prorsus pendulum plus aequo increaserent. Et profecte plures, eadem ratione inductus, detinuissest, nisi ipsi mentem subiisset, longum fortasse fore tempus, priusquam aliquod figurarum systema, hoc suo minus imperfectum, in lucem fit extirrum. Potius igitur duxit culpe in periculum incurgere, eo quod rem nimis copiole, quam quod parcus ac negligenter tractaverit.

Operi, nimis jam magnitudinis, nimisque sumptus, internam foetus anatomiam adjicere, supervacaneum fore visum est; præfertim cum aliis isto munere sunt functi; et cuiilibet, id qui de integro meditatur, haec omnia cognoscendi atque tractandi haud facile defutura est occasio.

Ip

P R E F A C E.

*For the reason already given it should seem obvious that anatomical figures ought to be likewise well finished. In many subjects of painting, indeed, the slight manner of producing an effect, without labour, is very agreeable; particularly when, either the subject is so well known, that a mere hint is enough to the imagination, which easily supplies all that is wanting; as, in designs where human figures, and other well known objects are introduced; or, when the smaller parts of objects are not to be seen distinctly, as the objects, especially those more distant ones, in a landscape. But in anatomy, as in natural history, the subject is supposed to be new, or only imperfectly known; and the smaller parts are to be studied with care, as well as the larger masses. In those parts of anatomical figures, indeed, which are mere repetitions, or nearly so, the labour and expence of finishing may well be saved. Accordingly in this work the greater part is tolerably well finished, some very highly and delicately; matters of less moment, or approaching to repetitions are executed in a slight manner; and what is merely a repetition, is commonly put down in bare out-lines.*

*Any judicious person, who examines this work with care, will naturally think that the plan might have been more regular and more compact: but it is presumed that he will be less dissatisfied with the authors best endeavours when he shall consider the difficulties which lie in the way, and render the subject almost unmanageable. In many other works of anatomy, imperfections, and particularly a want of method, are not readily excused. For, if the author will but take the pains, he may first of all make himself master of his subject by repeated dissections and experiments; he may, at his leisure, lay down a studied plan for a compleat and regular work; and with his own convenience he may execute his plan from a variety of dead bodies.*

*But, opportunities of dissecting the human pregnant uterus at leisure, very rarely occur. Indeed, to most anatomists, if they have happened at all, it has been but once or twice in their whole lives. Upon such occasions therefore, even when attended with the most favourable circumstances, the anatomist must fix upon a plan, without loss of time, and at once carry on two schemes which are hardly compatible; that is to say, he must dissect for his own information, in the first place, and yet conduct the inquiry so as to have good drawings made of the principal appearances; and it is more than probable that he must alter any plan that he might have proposed, and adapt it to a variety of circumstances in the subject that could not be foreseen; and much time must be lost, and the parts must be considerably injured by long exposure to the air before the painter; especially if the work be conducted by an anatomist who will not allow the artist to paint from memory or imagination, but only from immediate observation.*

*If the author could have foreseen the numerous opportunities which have fallen to his share, he might have easily improved some of the figures; and by adapting them better to one another he might have compleated the series in a smaller number. He has actually kept back several drawings which had been made, and two plates which had been engraved, that the work might not be overcharged; and would have withheld more, for that reason, if he had not thought that it would probably be long before a more perfect system of figures would be offered to the public. This consideration induced him to risk the being censured rather for having done too much, than too little.*

*In a work which was already become too large and expensive, it was thought proper to omit the internal anatomy of the child, especially as that part has been executed by others, and opportunities of studying it may be easily procured.*

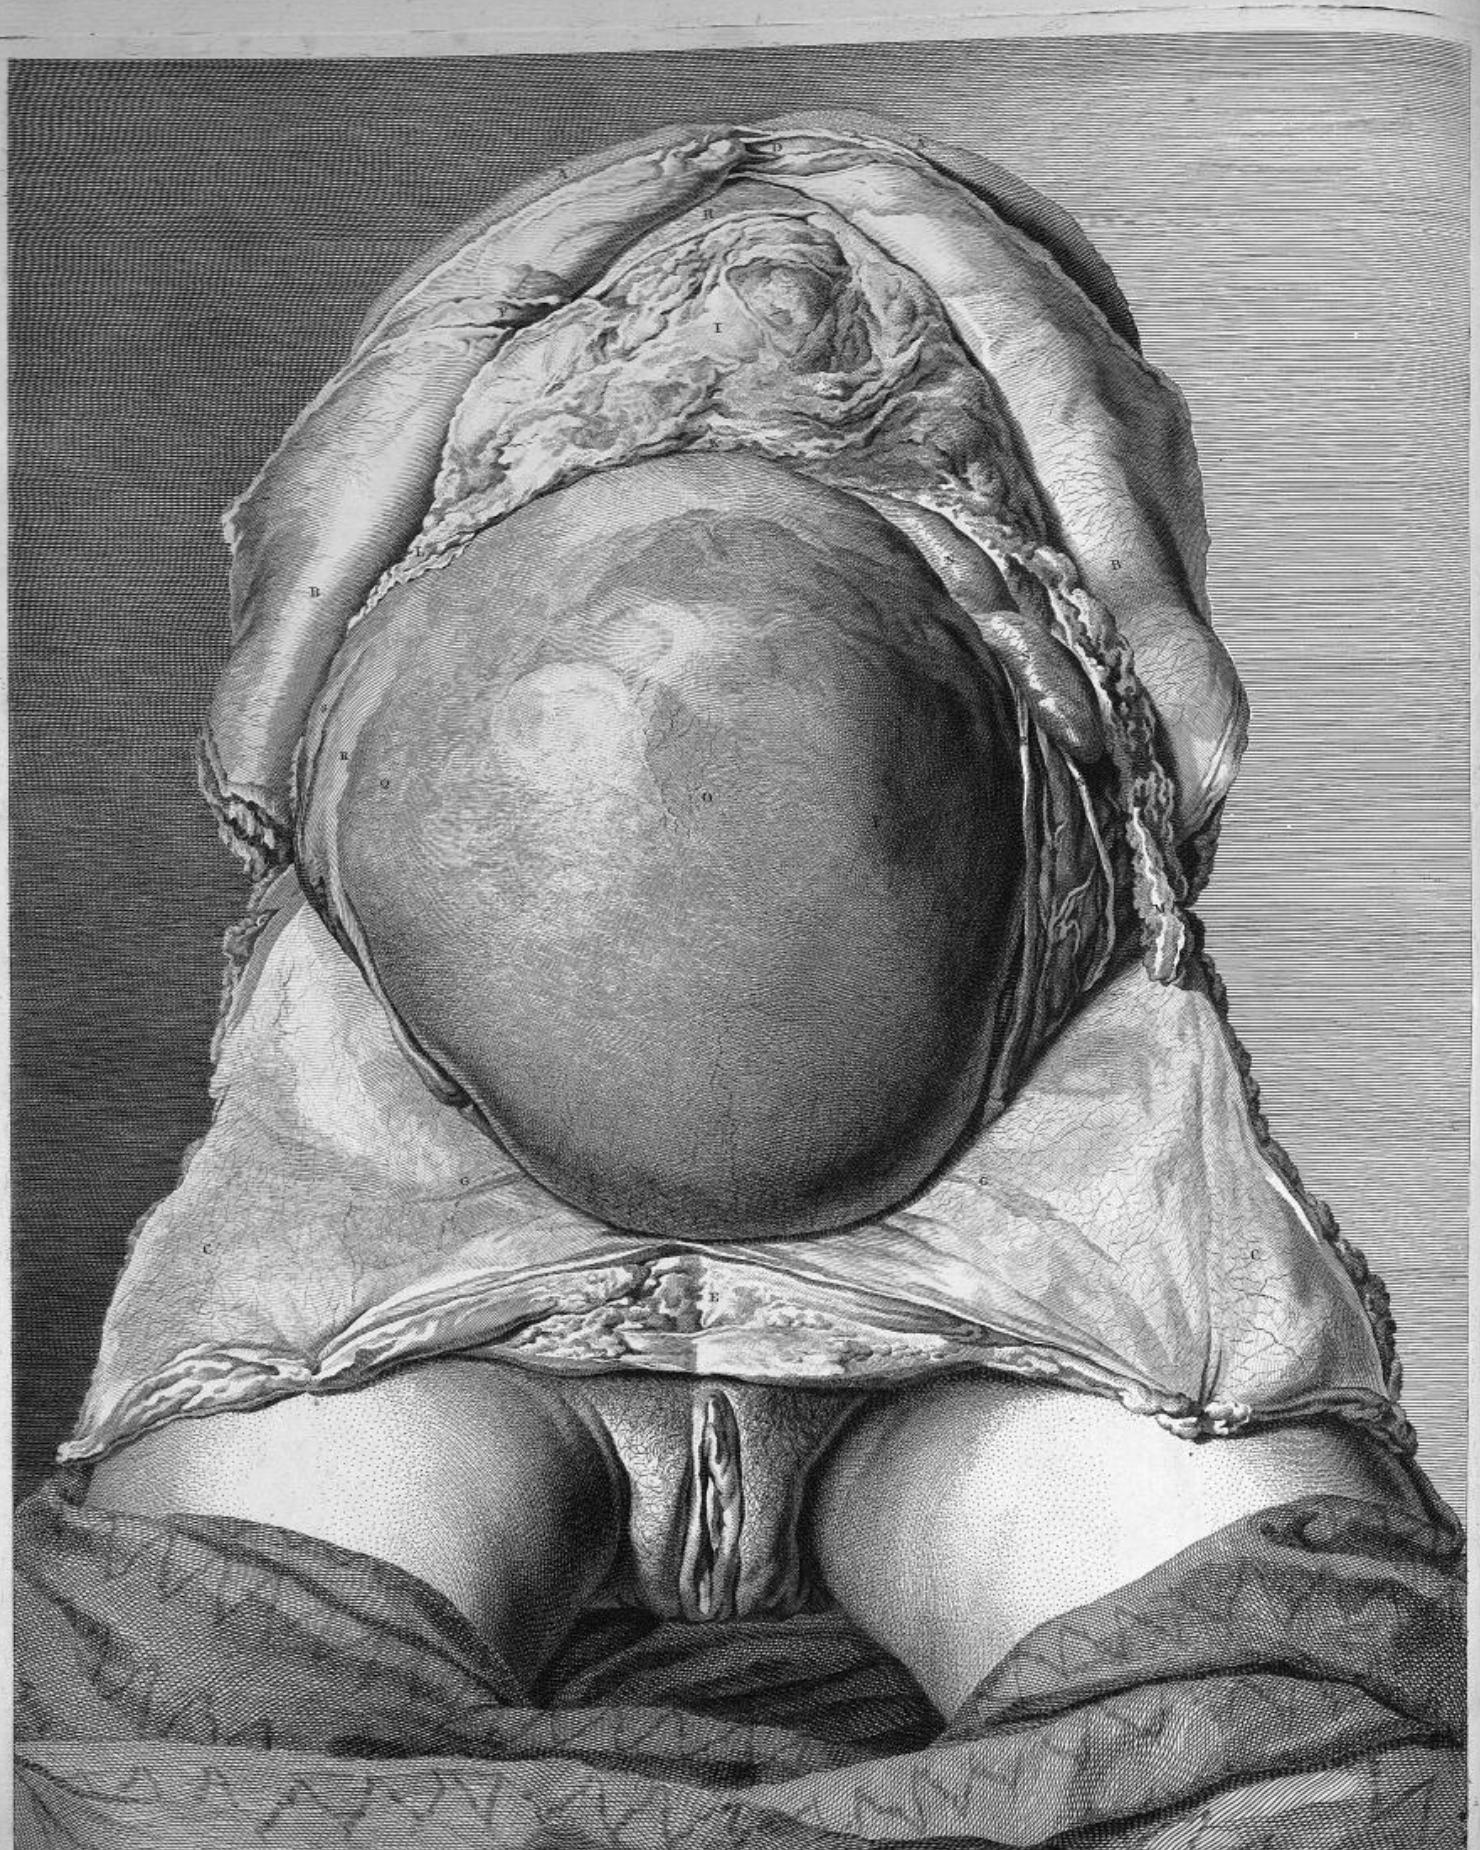

*The*

In artem typographicam sumptus, major solito factus est, non quidem folam ob elegantiam, qua opera celeberrimi artificis Joannis Baskerville ornantur omnia; sed praeclipe chartæ, qua ille uititur, atra mentisque ratione habita. Talis est enim chartæ hujuscē lēvor, atra mentisque tam cito arescit, ut folia, literis licet plenissima, tabule cum jusque interposita nitorem integrum atque illāsum conservatura fint.

Ad summam, si auctori ea laus fuerit concessa, quod, in hac prima parte humani corporis illustranda, neque opere fūxe, neque impenfarum, neque temporis rationem habuerit, voti sane fit compos, nec aliud gratiæ sibi apponi postulat. Harum autem laudum in partem plurimum merito suo evocandus est frater auctoris solertissimus *Joannes Hunter*; nam in plurimis cadaveribus secundis partem ille laborum sustinuit: cuius quidem viri acumen et diligentia in hujuscēmodi perverstigationibus adeo omnium sermone celebrantur, ut de illo si fileretur adjutore, operis ipsius pretio atque exaltationi parum effet consultum. Artificibus etiam singulis, quorum ingenii atque industria monumenta hic extant, gratias agit quas habet maximas; præ ceteris autem viro optimo ac peritissimo artifici *Roberto Strange*, non modo quod is manu sua tabularum harum duas tanquam æternitati consecrari, sed etiam quod, ab incepto operis usque ad exitum, auctorem amicitia stabili atque incorrupta dignatus, vel consilium vel auxilium expertenti haud unquam defuerit.

*The additional expense of Mr. Baskerville's art was not incurred for the sake of elegance alone; but principally for the advantage of his paper and ink, which render a leaf of his Press-Work an excellent preservative of the plates between which it is placed.*

*If it be allowed that the author has spared neither labour, nor time, nor expense in improving an important part of anatomy, this is all the merit which he can claim. In most of the dissections he was assisted by his brother Mr. John Hunter, whose accuracy in anatomical researches is so well known, that to omit this opportunity of thanking him for that assistance, would be in some measure to disregard the future reputation of the work itself. He owes likewise much to the ingenious artists who made the drawings and engravings; and particularly to Mr. Strange, not only for having by his hand secured a sort of immortality to two of the plates, but for having given his advice and assistance in every part with a steady and disinterested friendship.*

TAB. I. Dolor priores Sabulex Mulierem exhibent, non sere gravitatis. Mense exente subita morte extinctam. Alterie a venis erit diversi coloris  
injecti distincte erant. In hac prima contenta Abdominis, integumentis decussatum incisis et reflexis, sub conjectum veniunt. Resupinatum est duces  
clivis situ, cadaver, ut superior. Truncus pars haud paule est elevata, et viscera inde abdominalia clarissima contemplanda obsercentur.

Pub. Nov. 18, 1776, by D. Hunter.

# T A B U L A I.

**D**ECEM priores tabulae mulierem exhibent, non fere graviditatis mense exente, ann. 1750, subita morte extinctam. Arteriae a venis, cera diversi coloris injecta, distincte erant. In hac prima, contenta abdominis, integumentis decussatum incisis et reflexis, sub conspectum venient. Resupinatum est acclivi situ cadaver, ut superior trunci pars hand paulo esset elevata, et vena inde abdominis clarius contemplanda obicerentur.

Femora et pudenda, utpote partes externae, eam, quam ceterae, notationem non desiderant. Pudenda vero, in hoc cadavere, ut ex figura concipi potest, aqua inter cutim intumuerunt.

**A A** Pars anterior thoracis infra mammas, qua trunca erat transversi difcissus, figuram a parte superiori terminans.

**B B** Integumentis, musculis, et peritoneo decussatum incisis, eorum anguli duo superiores in marginem thoracis cartilagineum reflexi.

**C C** Eorundem anguli duo inferiores, in inguen, femur, et ossis ilium spinam anterorem, utrinque reclinati. In angulis illis, ad marginem inferiorem medio femori oppositum, observare licet partem rugosam et tenam, qua filum adhuc fuit, ea mente, ut, angulo detracito, uterus et partes vicine manifestius apparent.

**D** Incisionis longitudinalis, ad scrobiculum cordis a mucrone cartilagineum ensiformis ductae, extremitas superior.

**E** Ejusdem incisionis, ad symphyse ossium pubis, extremitas inferior.

**F** Hepatis ligamentum falciforme, super faciem internam musculorum abdominis, ad illius visceris fissuram, magnum inter lobum et parvum, protensum.

**G G** Arteria et vena epigastrica, in utrifice muscularum angulis inferioribus trans peritoneum sepe projicientes.

**H** Hepatis lobus sinistri, in parte summa regionis epigastricae situs. Illius in superficie, arteriae quedam parvae, ex substantia illius glandulosae exentes, et in peritoneum quo vesiculam diffusa, delineantur.

**I** Omentum in regione epigastrica situm, intestinis tenuibus incumbens. Vasa quamvis cera vividi coloris impleta, ob partis adipem cerni vix potuerunt.

**K** Omenti pars inferior et media, ab utero ante elevata, quae in plicatura multas quam minimas contracta jacuit et compressa.

**L** Omentum a latere dextro, post partem eam uteri, qua incipit tuba dextra, descendens.

**M** Omentum quod in latere sinistro ante tubam fallopiam, &c. descendat, fecundum positum, quo partes ea in conspectum prodirent.

**NN** Duo intestinorum tenuum gyri, quorum utrique, maxime autem inferior, omenti parte praedita testi fuerant.

**O** Uterus, regionem totam umbilicalem et hypogastricam possidens. Superficies ejus vasorum ramulis intertexta: horum pleraque venae. Multa sanguine columnmodo impleta, cadavere diutius astervato, paulatim evanuerunt. Situs uteri paulo obliquus, et ad latus dextrum. Umbilicus parte qua sita hanc litera aliquanto altior fuit. Forma uteri quodammodo irregulans; aliae ejus partes aliis eminentiores. Id ex eo oritur, partim quod visceribus vicinis incumbens, præsternit ad fundum, se ad eorum formam fixerat; partim etiam quod contenta ejus formam irregulariter praesertim tolerant.

**P** Tumor ad latus sinistrum uteri, in ea scilicet parte cui media placenta interne adhaerescebat.

**Q** Uteri tumor in latere dextro, ubi fetus nates jacebant, ubi etiam scutum per substantiam ejus satis distincte tactu sentire licuit. Undique circum hand partem uterus aliquanto depresso, et facili instar aqua repleti, tactum afficiebat.

**R R** Ligamenta rotunda. Sinistrum, propter uteri situm obliquum, dextro longius. Exitus amborum, angulis inferioribus integumentorum &c. filo deductis, in conspectum veniebat. Quæ stritura ibi videtur, nihil aliud est, quam peritonei in forma thecae duplicatio et protrusio, ea ligamenta per paululum spatii sequens, quæque ab eo peritonei processu, funem spermaticum canis vel tauri comitate, gradu tantum differt.

**S S** Tube fallopianæ. In latere dextro, solum fere tube principium cernere licet, parte reliqua post uterum descendente. In latere sinistro, tube media pars sola in conspectum venit; tegitur enim ejus principium intestino ibi posito; finemque ejus, vel fimbrias, vasa spermatica occultant. Ea vasa, in latere sinistro, satis aperte conspicuntur; spatium illud totum inter ligamentum rotundum et tubam occupant: vas parvum arteria; magnum ei adhaerens vena. Utraque ad uteri latus, in peritonei duplicatione illa, quæ ligamentum latum appellatur, procedunt.

# P L A T E I.

**T**HE first ten plates were made from the dissection of a woman, who died suddenly, in the end of her ninth month of pregnancy, in the year 1750. The arteries and the veins were injected with wax of different colours.

This plate represents the object, as it appeared when the abdomen was opened by a crucial incision, and the four angles of the containing parts turned outwards; the subject lying on its back, but so that the upper part of the trunk was considerably higher than the rest.

The thighs and pudenda require no explanation: the latter of these were edematous in the subject, as they appear in this figure.

**A A** The forepart of the chest, just below the breasts, where the trunk was cut through, and which therefore terminates the figure above.

**B B** The two upper angles of the integuments, muscles, and peritoneum, turned back over the cartilaginous margin of the chest.

**C C** The two inferior angles, turned down over the groin, thigh, and anterior spine of the os ilium, on each side. In each of these, at its lower edge and opposite to the middle of the thigh, a part may be observed to be stretched and pucker'd, where a thread was fixed, which pulled the flap down, in order more fully to expose the womb and adjacent parts.

**D** The upper end of the longitudinal incision, at the pit of the stomach, beginning just at the point of the ensiform cartilage.

**E** The lower end of the same incision carried down to the symphysis of the ossa pubis.

**F** The umbilical or falciform ligament of the liver, which runs upwards, on the inside of the abdominal muscles, to the fissure between the great and the small lobe of that viscus.

**G G** The epigastric artery and vein, projecting through the peritoneum, upon each of the lower angles of the muscles.

**H** The small lobe of the liver, situated in the highest part of the epigastric region. Upon its surface are represented some small arteries, which emerge from the glandular substance, and are diffused in the peritoneum that covers it.

**I** The omentum, spread over the small intestines in the epigastric region. The vessels of this part, tho' injected, were hardly visible, being obscured by fat.

**K** The lower and middle part of the omentum, which had been pushed up by the womb, and lay in numerous small folds pressed together.

**L** The omentum, in the right side, passing a little way down behind that part of the womb from which the right tube begins.

**M** The omentum, in the left side, which came down before the fallopian tube, &c. and which was thrown a little aside, that those parts might be seen.

**NN** Two turns of the small intestines; both of which, but especially the lower, were covered by the above-mentioned part of the omentum.

**O** The womb, possessing all the umbilical and hypogastric regions. Its surface is interpersed with a number of small vessels, the greatest part of which are veins. They were filled with blood only, and therefore gradually disappeared after the subject had been preserved some time. Its situation is a little oblique, and towards the right side. The navel was a little higher than the part upon which this letter is placed. The form of the womb is a little irregular, at some places projecting more than at others. This seemed partly owing to its being moulded upon the neighbouring bowels, particularly at its fundus; and partly to its contents; whence,

**P** A swelling towards the left side of the womb, where the middle of the placenta adhered; and

**Q** A swelling on the right side of the womb, where the buttocks of the child lay; and where the child could be felt, pretty distinctly, through its substance. All around this part the womb was somewhat depressed, and felt like a bag of water.

**R R** The round ligaments. The left is longer than the right, because of the oblique situation of the womb. The exit of each was brought to view by drawing down the lower angles of the integuments, &c. with threads: and the appearance of a stricture there, was occasioned by a sheath-like doubling and protrusion of the peritoneum attending those ligaments some little way; which differed only in degree from that process of the peritoneum, which accompanies the spermatic rope in a dog, or bull.

**S S** The fallopian tubes. In the right side, little more than the beginning of the tube is seen, the rest running down behind the womb. Of the left tube the middle part only is exposed; its beginning at the womb being concealed by the gut which lies upon that part, and the end or fimbriae being covered by the spermatic vessels. Those vessels are pretty distinctly seen in the left side: they fill up all the space between the round ligament and the tube: the small vessel is the artery, and the great, to which that clings, is the vein: both of them are passing up to the side of the womb, in that doubling of the peritoneum called, the broad ligament.

## T A B U L A II.

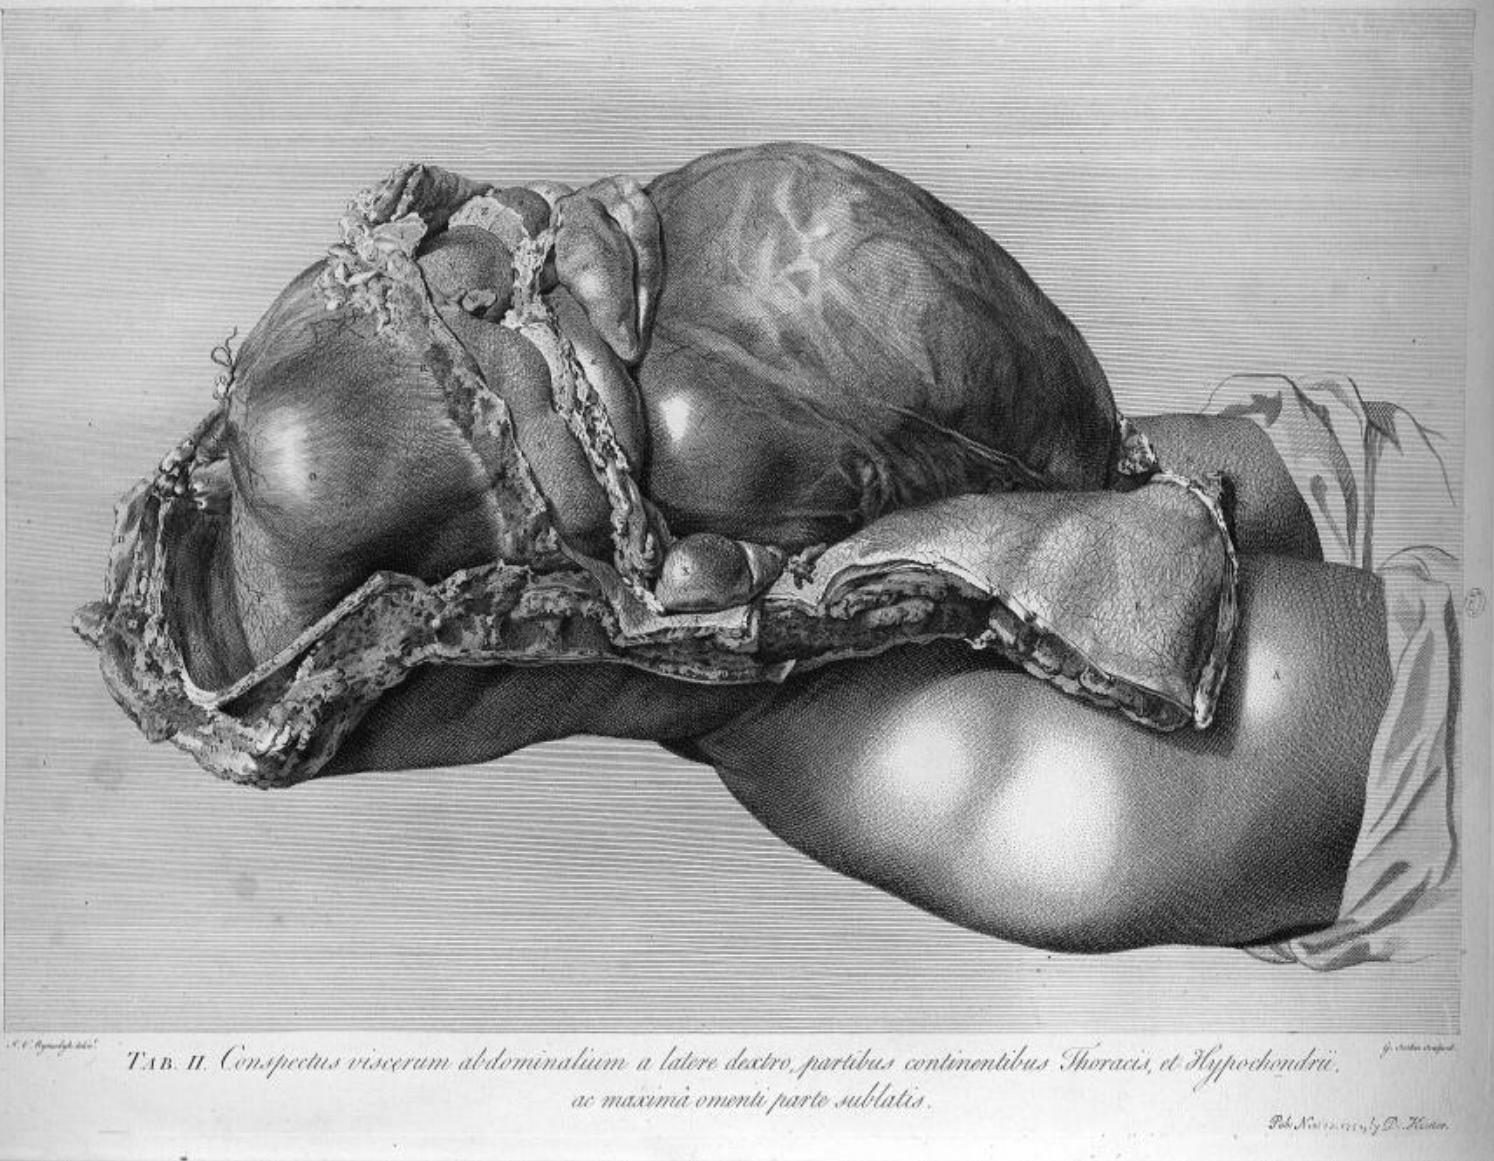

**C**ONSPECTUS viscérum abdominis a latere dextro, partibus continentibus thoracis et hypochondrii, ac maxima omenti parte sublati.

- A A Femora, ubi transverse scissa, linteo cooperata.
- B Spina, supra diaphragma, transverse discessa.
- C Costæ octava pars.
- DD Integumenta et musculi, ad partem thoracis posteriorem, eo loco quo negligenter sejunctus erat truncus, resiliunt.
- E Musculorum abdominis angulus inferior, in femur, ut in praecedente figura, devolutus.
- F Montis, ut dicitur, veneris pars, una cum musculis abdominis, devoluta.
- G Ad finistrum latus pars huic respondens.
- H Thoracis margo, ad latus siccibiculi cordis finistrum, peritoneo et musculis inversis, tectus.
- I Cartilago mucronata.
- KK Costæ inferiores, partesque cæteræ continentia sectione longitudinali sejunctæ, adeo ut, iis quæ sectionem et siccibicum cordis interjacentem remotis, viscera hypochondrii dextri sese vindenda offerant.
- L Pars ima atque posterior cavi dextri thoracis.
- M Aorta descendens, eo loco, quo cadaver transverse discessum fuerat, deligata; nec non, colorata cera impleta.
- N Oesophagus ibidem deligitus.
- O Superficies superior convexa diaphragmatis; quod, pleura testum, in situ suo naturali manet.
- P Diaphragmatis centri tendinei pars quæ in dextro latere sita est.
- Q Venæ cavæ inferioris truncus, juxta diaphragmatis superficiem superiorem deligitus.
- RR Pleuræ fecit margo, loco quo reflexa de superficie superiori diaphragmatis, faciem internam costarum contegebatur.
- SS Peritonei fecit margo, loco quo scilicet a superficie diaphragmatis inferiori, membranæ investientis more, ad faciem internam musculorum abdominis cursum tenebat.
- Superficies inter margines pleuræ (RR) et peritonei (SS) connexio est diaphragmatis ex facie interna costarum dirupta.
- T Facies interna musculi transversi peritoneo tecta.
- U Hepatis lobus magnus, vel dexter; in cuius crepidine, ex adverso literæ U, exiguum videtur est fossulam, quam vesicula ictalis figuræ fuit aptaverat, faciei interna hepatis hic loci apposita.
- V Hepatis lobus parvus, in hypochondrium finistrum lese extensus.
- W Ligamentum hepatis falciforme, seu venæ umbilicalis reliquæ, loco quo fissuram hepatis intrat, rēcūsum.
- X Colon ex cæco ad hepatis sursum transiens.
- Y Colon, cum appendiculis suis adiposis, finistrorum currens, hepar inter et intellina tenuia.
- Z Omenti principium vel radix, quod ex intervallo hepatis et intestinorum tenuium nascitur.
- aaaa Illorum intestinorum tenuium gyri aliqui, omento paulo infra marginem hepatis excisso, in conspectum veniunt.
- b Uterus. In facie ejus externa, venas, aliquantulum obscurias, notare licet. Hæ, cum cadaver primum apertum posui, cera etiæ implete, colore tantum dilinguébantur. Tempore autem quo tabula hæc erat delineata, venæ, parte jam arefactæ, sese magis projiciebant, ut in figura quodammodo se videndas offerant.
- c Ligamentum rotundum in inguen descendens.
- d Tuba fallopiana, juxta faciem internam ossis ilium retrosum currens.
- e Tuba extremitas fimbriata, pone latus uteri jacens, hic paulum educita, nempe ut conspiciantur. Ligamentum rotundum inter et tubam, vasa spermatica, præsertim vena, conspicuntur, ad partem uteri anteriorem, cui placenta adhaerbat, præcipue tenuientia.
- f Uteri angulus prominens, loco quo foetus nates, utero nondum adaptato, tactu sentire licet.
- N. B. Costis notis lateris dextri remotis, illæ quæ ad latus erant finistrum, ex vi resiliendi, marginem thoracis (H) et exinde cartilagineum ensiformem elevarunt; unde facies ejus anterior in dextrum latus oblique tendebat.
- Figura hac nondum delineata uterum observavi sensim subfissæ; quapropter ope quam minime cannula, uterum, spirito vinofo injiciendo, in primitam figuram restituere conatus sum.

## P L A T E II.

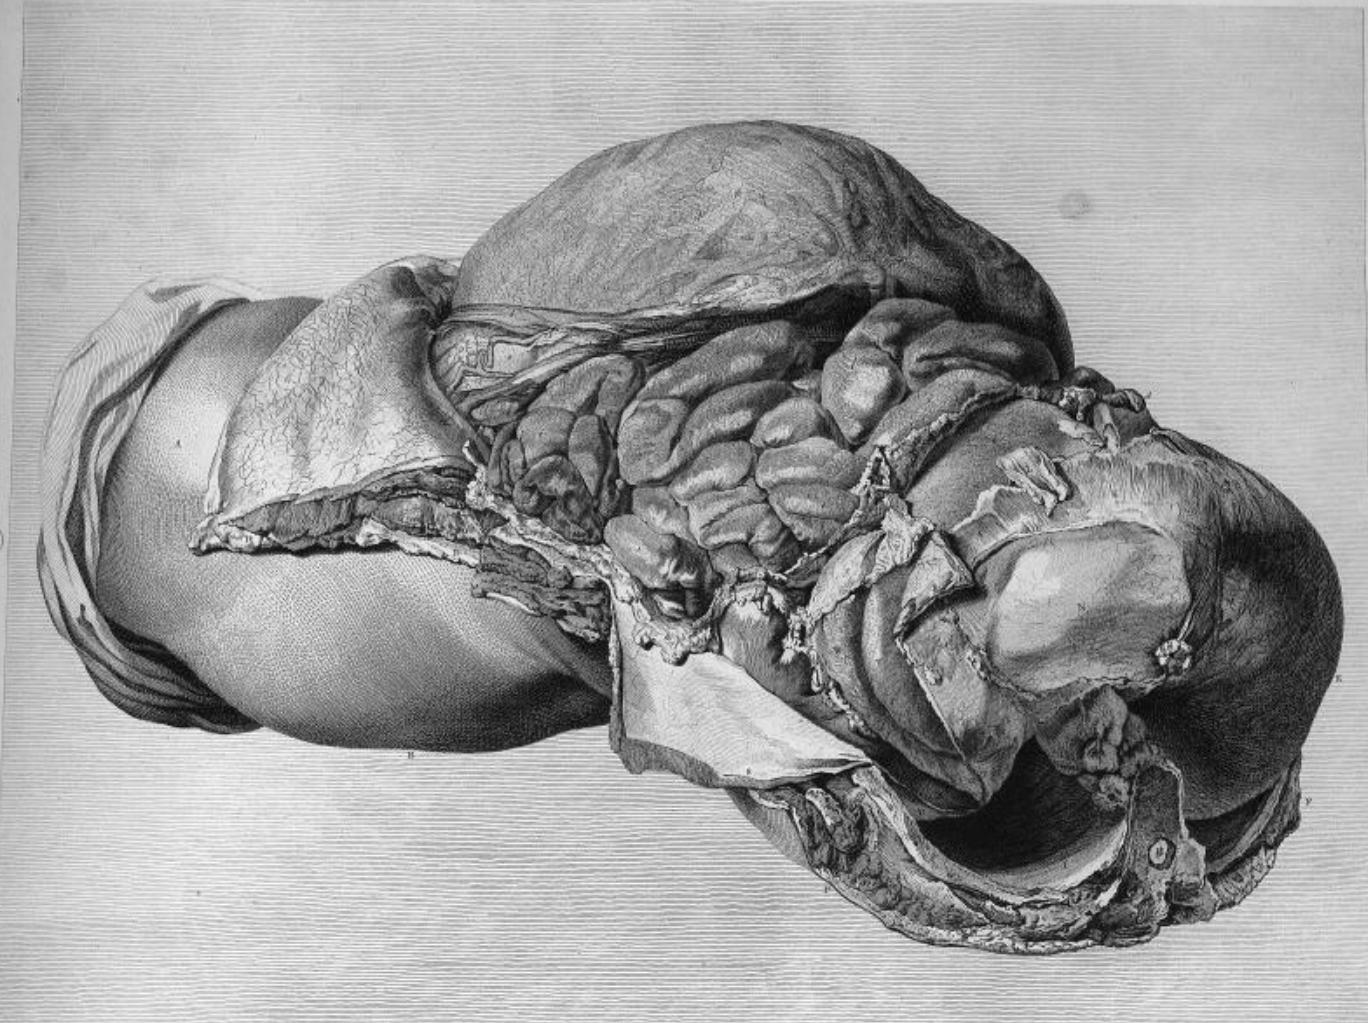

*A View of the same object from the right side, after the upper abdominal flap, and the containing parts of the right hypochondrium had been removed, that the whole mass of the abdominal viscera might appear in its natural situation, the subject lying on its back.*

- AA The thighs, covered with a cloth where they had been cut through.
- B The back-bone cut through above the diaphragm.
- C Part of the eighth rib.
- DD The integuments and muscles at the back part of the chest, cut rudely through in severing the trunk at that place.
- E The inferior flap of the abdominal muscles, &c. turned down over the thigh, as in the preceding figure.
- F Part of the mons veneris turned aside with the abdominal muscles.
- G The respective part of the left side.
- H The margin of the chest at the left side of the siccibulus cordis, covered by the peritoneum and muscles, which are turned over it.
- I The ensiform cartilage.
- KK The lower ribs and other containing parts, cut down longitudinally, by which means all the parts, between this section and the siccibulum cordis were removed, that the viscera of the right hypochondrium might be exposed to view.
- L The posterior and lower part of the right cavity of the chest.
- M The trunk of the descending aorta, tied up where it was cut, and filled with injection.
- N The oesophagus, tied up at the same place.
- O The upper convex surface of the diaphragm, which remains, covered by the pleura, in its natural situation.
- P That part of the centrum tendinosum of the diaphragm which is in the right side.
- Q The trunk of the lower cava tied, close to the upper surface of the diaphragm.
- R The cut edge of the pleura, where it was reflected, from the upper surface of the diaphragm, to line the inside of the ribs.
- SS The cut edge of the peritoneum, where it was continued as an investing membrane, from the inferior surface of the diaphragm, to the inside of the abdominal muscles.
- The surface which is seen between the edge of the pleura (R.R) and that of the peritoneum (S.S) is the attachment of the diaphragm cut off from the inside of the ribs.
- T The inside of the transversus muscle covered with the peritoneum.
- U The great, or right lobe of the liver; at the lower edge of which, over against the letter U, there is a small notch formed by the concave bed of the gall bladder, which lies upon the inside of the liver at this place.
- V The small lobe of the liver, which stretches over into the left hypochondrium, and is therefore seen in perspective.
- W The falciform ligament, or remains of the umbilical vein, cut off as it enters the fissure of the liver.
- X The colon passing up from the cæcum to the liver.
- YY The colon with its appendiculae adiposæ running towards the left side, between the liver and small guts.
- ZZ The beginning or root of the omentum, coming downwards from the interface of the liver and small guts.
- aaaa Some turns of those small intestines brought to view by cutting off the omentum a little below the edge of the liver.
- b The womb. Upon its surface we can trace, though obscurely, its veins. These, though injected, were distinguishable only by their colour when the subject was first opened: But when this drawing was made, the part, having been some time in the air, had become a little dry, and the veins projected, as they appear in the figure.
- c The round ligament running down to its passage into the groin.
- d The fallopian tube running backwards on the inside of the os ilium.
- e The fimbriated end of the tube, lying behind the side of the womb; but drawn a little out, that it might be seen.
- Between the round ligament and the tube, are seen the spermatic vessels, especially the vein, which go chiefly, or by their largest branches, to the forepart of the womb where the placenta adhered.
- f The prominent corner of the womb, where the buttocks or loins of the child were distinctly felt before the part was opened.
- N. B. The false ribs of the right side having been removed, those of the left side, by their elasticity raised up the margin of the chest (H) and consequently the ensiform cartilage; the anterior surface of which was thereby turned obliquely to the right side.
- Just before this figure was made, I had observed that the womb had ingeniously subsisted, and therefore by the cannula of a very small trocar I injected some spirits to raise it up, as nearly as I could guess, to the figure it had when the abdomen was first opened.

J. C. Agarwala delin.  
TAB. II. Conspectus viscerum abdominalium a latere dextro, partibus continentibus Thoraci, et Hypochondrii,  
ac maxima omenti parte sublatiss.

Pub. Nov 1751 by D. Hinton.

J. F. Dujardin delin.  
TAB. III. Viscera eadem abdominalia a sinistro latere, una cum Diaphragmate us superiore. Facile apparet in determinanda hic figuris,  
conjectum oculi suisse a parte lateris superiori oblique dorsum, uterus quippe posttuberosus femur dextrum visus intercedebat.

### T A B U L A III.

PARTIS trunci inferioris prospexit; oculo scilicet a parte finistri lateris superiori, oblique deorum ita collinato, ut univerba viscerum compages, una cum diaphragmate, in situ suo naturali apparet.

- A Femur sinistrum. Uteri prominentia femur dextrum oculo subtrahit.
- B Clunis sinistra.
- C Integumentorum et muscularum abdominis, lateris sinistri, angulus inferior in inguen et femur inversus.
- D Integumentorum et muscularum abdominis sectio transversa.
- EE Partium abdominis continentium sectio longitudinalis, ab ilium osse furcum ducta. Hac sectione, angulus superior partium continentium omnino auferitur, ut viscera hypochondri finistri in conspectu ponantur.
- FF Partium thoracis continentium posteriorum sectio transversa.
- G Vertebra transversa scissa.
- H Medulla spinalis.
- II Cavorum thoraci partes inferiores posticæ, quæ pulmonibus sublati, vacuae conspiciri possunt.
- KK Diaphragma superficiem convexam hepatis complectens.
- L Cartilago mucronata, diaphragmati adhuc adhaerens.
- M Diaphragmatica ad latus dextrum convexitas magna; quæ in hoc cadavere, pars huic consentanea in latere finistro elatior comparuit. Ibi etiam vasa nonnulla conspicuntur; quorum majora, vena scilicet phrenicæ, cera impleta sunt a vena cava; hinc altius extantia.
- N Diaphragmatis superficies, qua pericardio annectitur, quæque cor sustinet.
- O Vena cava, ubi per diaphragma tranfit, deligata.
- P Oesophagus supra diaphragma deligatus. Hunc cera injecta, dum per arterias fluebat, materia colorante amissa, in ventriculum transiens, implevit.
- Q Aorta, codem modo, ubi corporis truncus transverso fuerat scissus, supra diaphragma, deligata.
- Oesophagus et aorta, una cum spinae prominentia, cavum fastigium in diaphragmatis parte postica et superiori efficiunt.
- RSTU Diaphragma in hypochondrio finistro recium. Ex parte posteriori, labia (TU) ejusdem fissura in diaphragmate mutuo recedunt; et ex parte anteriori, anguli (R S) inversi sunt, nempe viscera hypochondri finistri in conspectu veniant.
- V Hepatis extremitas sinistra.
- W Ventriculi extremitas sinistra.
- XX Lienis margo anterior denticulatus.
- a Hepatis lobus dexter.
- b Ligamentum falciforme, fissuram hepatis intrans.
- c Hepatis lobi sinistri ea pars que in regione epigastrica sedem habet.
- dddd Omenti radix dextrorum de ventriculo et colo, hepar inter et intestina tenuia, descendens.
- eeff Omenti radix in hypochondrio finistro ita disposita, ut cavum sanguinum exhibeat. Ea pars, que marfupii omenti anteriorem partem facit (ee), queque de ventriculo descendit, ventriculo jam et hepati incubuit replicata: omenti autem pars posterior, quæ colo connectitur (ff) ante intestina tenuia in proprio manet fitu.
- gg Omenti radix, ventriculum inter et lienem.
- hh Omenti pars ad latus sinistrum, in situ suo naturali, tenuia inter intestina et peritoneum faciem internam transversalis abdominis integens.
- iii Intestinorum tenuium gyri multo inferiores et frequentiores hac in parte, quam eorum, quæ in latere dextro jacent; partim propter obliquitatem uteri, præcipue autem quod in latere dextro heparis moles minus spatii intestinis permittit.
- k Uterus. Tempore quo figura haec delineabatur, pars uteri superior arefcere cooperat, unde vasa infarcta, magis conspicua sese exhibebant: minorum pleraque arteriae sunt; majora omnia venæ.
- l Ligamentum rotundum.
- m Tuba.
- n Arteria spermaticæ ramus magnus, trans ligamentum latum ad uterus repens.
- oo Ramorum, venæ scilicet spermaticæ, majorum fasciculus, per ligamentum latum ad uterus ascendentium.

### P L A T E III.

A View, from the left side and downwards, of the lower part of the trunk; so prepared, as to shew the whole mass of the bowels, with the diaphragm, in their natural situation.

- A The left thigh. The right thigh is covered from our view by the projection of the womb.
- B The left buttock.
- C The lower flap of the integuments and abdominal muscles on the left side, turned down over the groin and thigh.
- DD The section of the integuments and muscles, made by the transverse incision of the belly.
- EE A longitudinal section of the containing parts of the belly, carried upwards from the os ilium, or posterior extremity of the transverse incision, parallel to the spine; whereby the upper flap of the containing parts is entirely removed, to shew the viscera of the left hypochondrium.
- FF A transverse section of the posterior containing parts of the chest.
- G The body of the vertebra cut through.
- H The spinal marrow.
- II The lower posterior parts of the cavities of the chest, which are seen empty, the lungs being removed.
- KK The diaphragm, embracing the convex surface of the liver.
- L The ensiform cartilage left adhering to the diaphragm.
- M The great convexity of the diaphragm in the right side, which in this subject was much higher than the analogous part in the left. Upon this part, some vessels are seen: the larger are the phrenic veins, which were filled with wax from the cava, and are therefore prominent.
- N The surface of the diaphragm, where the pericardium is united with it, and upon which the heart rests.
- O The vena cava tied, as it passes through the diaphragm.
- P The oesophagus, tied above the diaphragm. It was filled by the injection, which passed without the red colour, from the arteries into the stomach.
- Q The aorta, in the same manner tied above the diaphragm, where the trunk of the body was cut through.
- The oesophagus and aorta, as well as the projection of the spine, make a considerable notch upon the upper posterior part of the diaphragm.
- RSTU The diaphragm, slit up in the left hypochondrium. At the posterior part, the lips of the fissure in the diaphragm (TU) recede from each other; and forwards, the corners (RS) are inverted, to shew the viscera in the left hypochondrium: viz,
- V The left extremity of the liver;
- WW The left, or great extremity of the stomach; and
- XX The spleen: its anterior edge indented.
- a The right, or great lobe of the liver.
- b The falciform ligament, entering the fissure of the liver.
- c That part of the small lobe of the liver which lies in the epigastric region.
- ddd The root of the omentum towards the right side, coming down from the stomach and colon, between the liver and the small intestines.
- eeff The root of the omentum in the left hypochondrium, so disposed as to shew its cavity. What makes the anterior part of the pouch of the omentum (ee) which comes down from the bottom of the stomach, is turned up over the stomach and liver: and the posterior part of the omentum (ff) which is fixed to the colon is left, in its natural situation, before the small intestines.
- gg The root of the omentum, between the stomach and spleen.
- hhh Part of the omentum in the left side, in its natural situation, between the small intestines and the peritoneum which lines the transversalis muscle.
- iii The convolutions of the small intestines, which are considerably lower and in greater quantity in this side than in the right; partly because of the obliquity of the womb, but chiefly because in that side the liver comes low down, and leaves little space for intestines.
- k The womb: which had begun to dry at its upper part when this figure was taken; so that the injected vessels began to appear more remarkably. The smaller are chiefly arteries; the larger are all veins.
- l The round ligament.
- m The tube.
- n A large branch of the spermatic artery going across the broad ligament to the womb.
- oo A group of large veins from the spermatic, mounting in the broad ligament to the womb.

## T A B U L A IV.

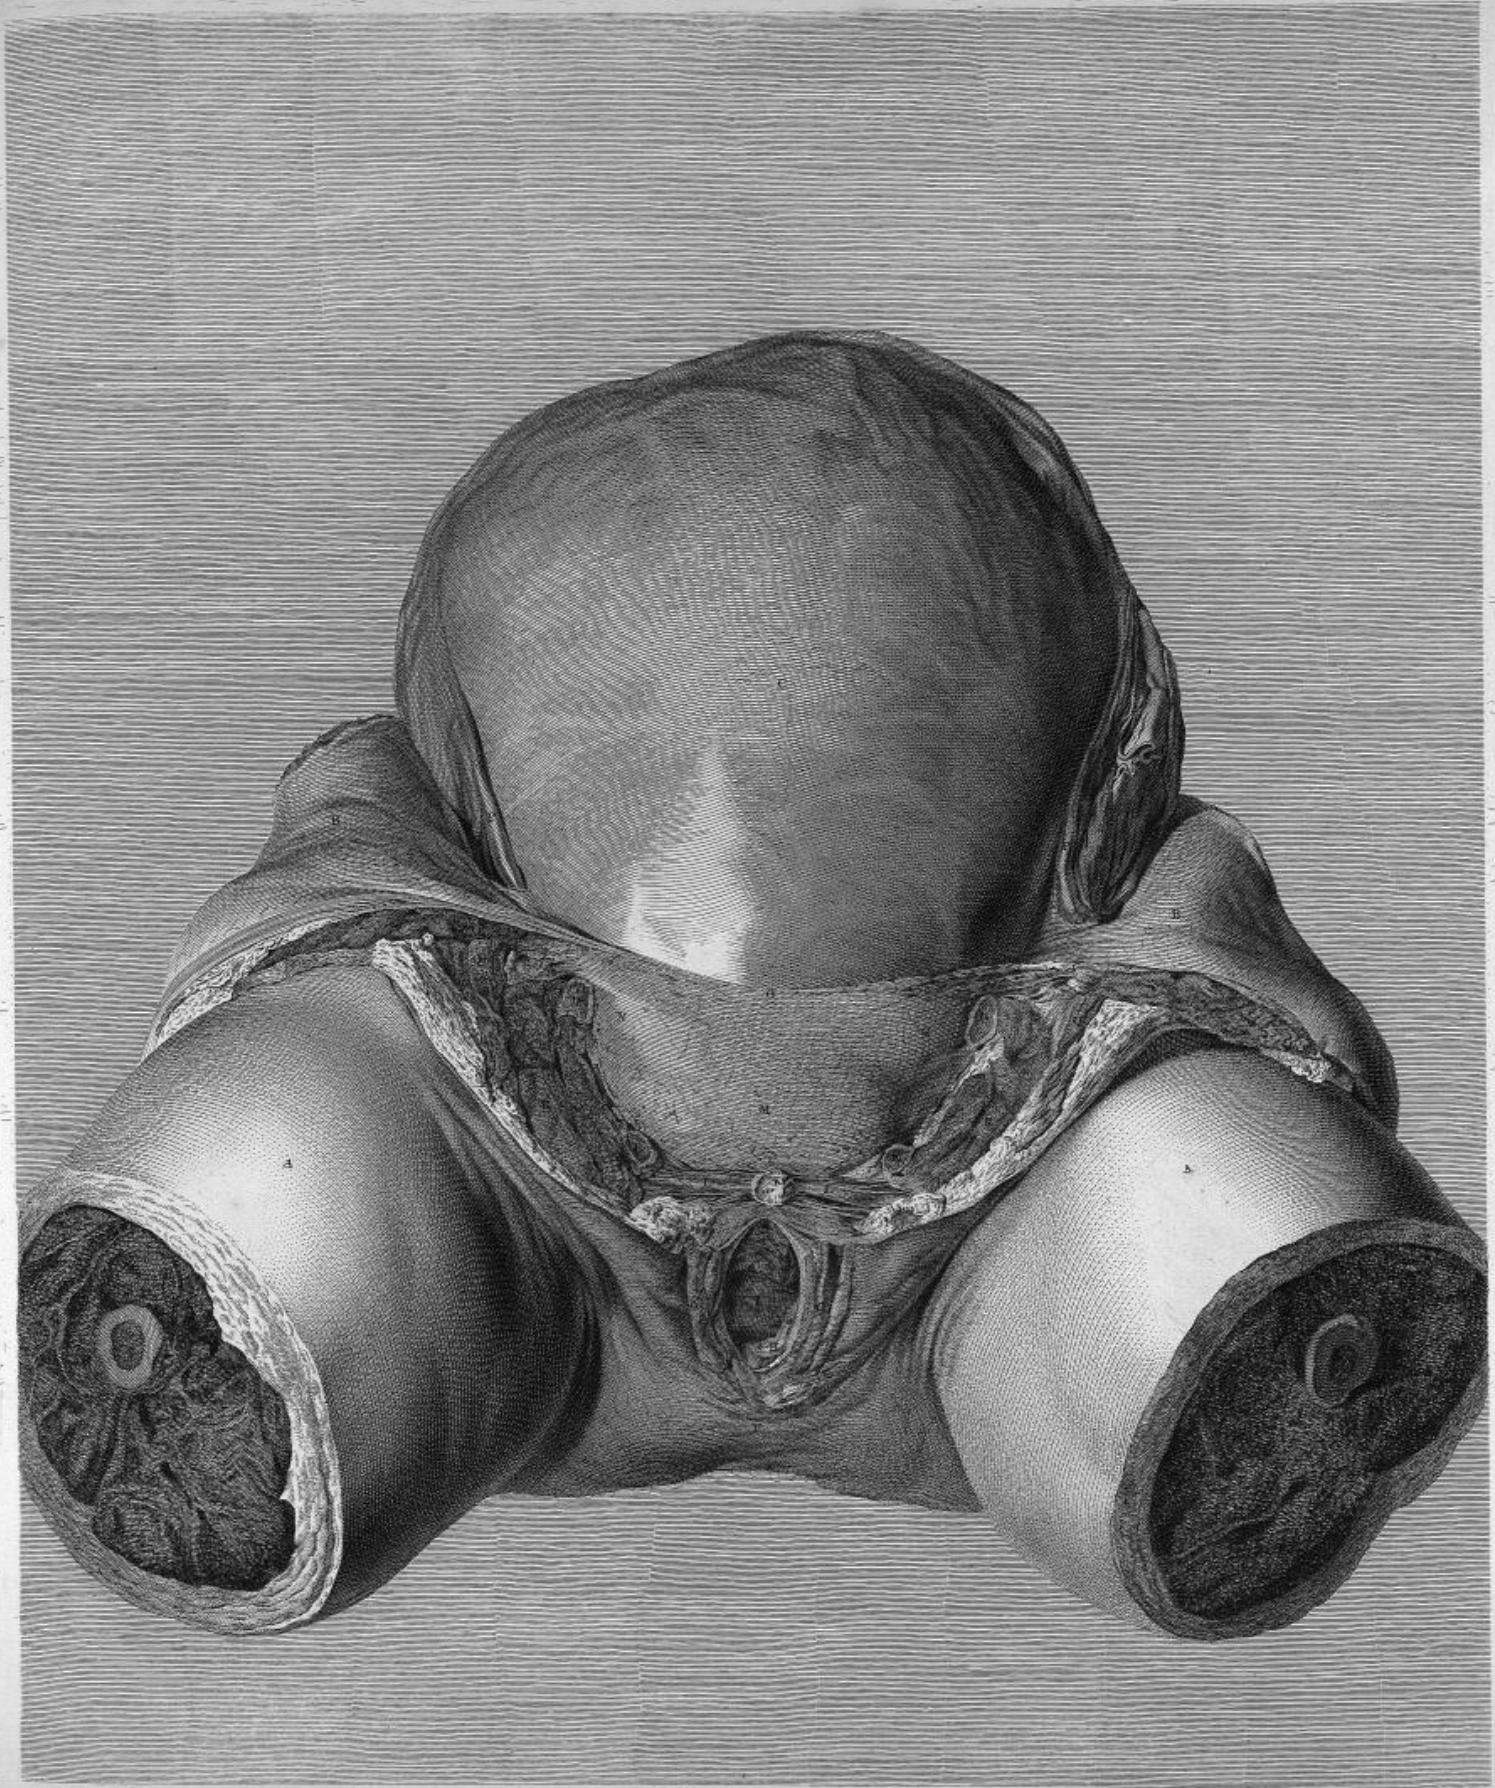

**U**TERUS, et contenta pelvis a parte anteriori: ossa pubis, cum integumentis, et superiori pudendorum parte, omnino fuerant abscissa, quo cervix uteri, et vesica simul urinaria ei praetensa, oculo incidenter.

- AA* Femora transverse abscissa.
- BB* Musculorum abdominis, et peritonei, anguli inferiores, in latera reflexi.
- C* Uterus; cuius in tota superficie, perque substantiam, vasa cera impleta, et exinde prominenta, conspicuntur.
- DD* Os pubis utrinque supra foramen magnum ischii resectum.
- EE* Ischii processus parvus, eo in loco ubi ossa pubis committitur resecatus.
- F* Perineum.
- GG* Labia pudendi: horum pars superior, nymphae etiam, et clitoridis extremitas, abscinduntur.
- HH* Caruncula myrtiformis insignis.
- I* Vagina. In parte hujus introitus inferiore (nigriore scilicet in hac tabula), vaginae cavum, tam retrofum quam sursum ducens, representatur. Ad literam (*I*) conficitur vagina pars superior et anterior, quae cum vesica urinaria et urethra connexitur, quaeque a vescibus incumbentibus deprimitur. Ad punctum etiam orificii hujuscem, fuscum, ovati, superius, urethrae extremitas prominens, meatusque urinarii orificium conspicuntur.
- K* Clitoridis corpus transverse discilium: in medio, duas arterias fere contiguas, scilicet in utroque corpore cavernoso unam, cernere licet.
- L* Clitoridis crura et erektores. Haec, ossibus pubis quibus annectuntur sublati, magis horizonti ad libellam, quam in situ suo naturali, respondentia jacent. Sejunctio autem ossium pelvis, nempe ut contenta ejus melius possint conspiciri, extenduntur.
- M* Vesicae urinariae pars superior, simul utero, pone fito, et caput fetus continent, simul ossibus pubis unitis, eam exadversum ambientibus, comprescam.
- NN* Peritoneum reflexum, telaque cellulosa, latera integens pelvis, et ei uteri parti quam ossa pubis amplectuntur, circumiacens.
- O* Ex peritoneo et tela cellulosa reflectis, margo, eo loco ubi de vesica urinaria ad faciem internam musculorum abdominis tegendum, supra ossa pubis, ascendent.
- PP* Ligamenta rotunda, abdominis intra cavum.
- QQ* Ligamenta rotunda, eo in loco ubi ex abdomine recedentia sese in montis veneris lateribus senim recondunt.
- RR* Musculi femoris, ossibus pubis exorti, resciissi.

## P L A T E IV.

*A* Fore-view of the womb, and of the contents of the pelvis; the ossa pubis, with the muscles and integuments which cover them, being removed.

- AA* The thighs cut through.
- BB* The lower angles, or flaps of the abdominal muscles and peritoneum turned aside.
- C* The womb. All over its surface the injected vessels are seen projecting through its substance.
- DD* The os pubis of each side cut through, above the foramen magnum ischii.
- EE* The small branch of the ilchium which joins the os pubis, cut through.
- F* The perineum.
- GG* The labia pudendi. The upper part of those, the nymphæ and the extremity of the clitoris are cut off.
- H* A large caruncula myrtiformis.
- I* The vagina. At the lower part of this passage, the deeper black part of the surface, in this figure, represents the cavity of the vagina leading backwards as well as upwards: and where this letter (*I*) stands, is seen the upper or anterior part of the vagina which is united to the bladder and urethra, and which is pressed downwards by the viscera that lie over it. At the upper point of this dark oval orifice, the tuberos extremity of the urethra is seen, with the orifice of the meatus urinarius.
- K* The body of the clitoris cut through; in the middle of which two small arteries are seen almost contiguous, viz. one in each corpus cavernosum.
- LL* The crura and erektores clitoridis. These lie more horizontally than in the natural state, the ossa pubis, &c. which suspend them, being removed: and they are stretched or lengthened, from the bones of the pelvis being drawn a little asunder that the contents might be better seen.
- M* The upper part of the bladder, which was compressed between the womb containing the child's head, which lay behind it, and the united ossa pubis which had embraced it forwards.
- NN* The reflected peritoneum and cellular membrane, which lines the sides of the pelvis, surrounding that part of the womb which was embraced by the ossa pubis.
- O* The cut edge of the peritoneum and cellular membrane, where these afford from the bladder to line the abdominal muscles above the ossa pubis.
- PP* The round ligaments within the cavity of the abdomen.
- QQ* The round ligaments after they have passed out of the abdomen, where they are insensibly lost in the sides of the mons veneris.
- RR* The muscles of the thigh, which spring from the ossa pubis, cut through.

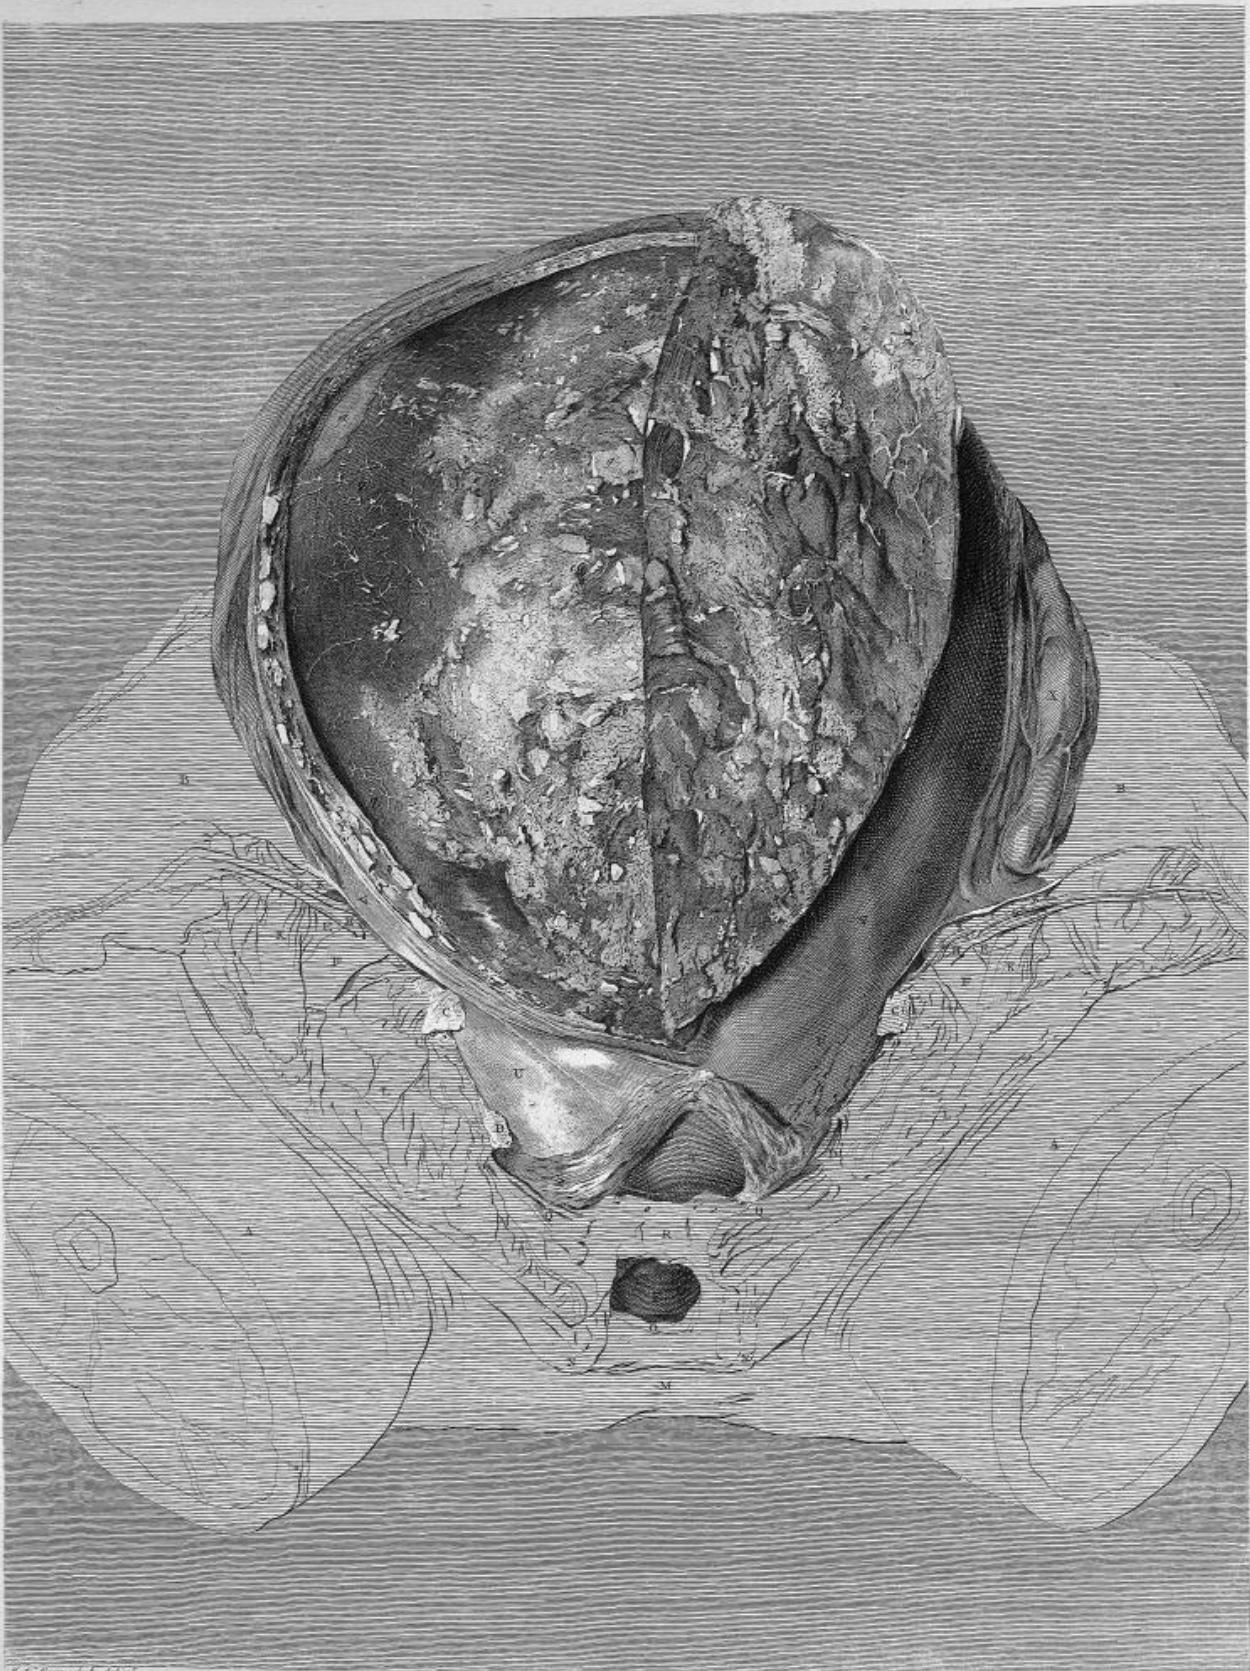

F. C. Rijmondyk delin.

H. Strangor sculp.

TAB. IV. Uterus, et contenta Pilvis a parte anteriori, ossa pubis, cum integumentis, et superiori pudendorum parte,  
omnino fuerant abscisæ, quo cervix uteri, et vesica simul urinaria ei protensa in visum incurserent.

Pub. Nov: 18. 1756, by Dr. Hunter.

J. C. Heynsius delin.

TAB. V. Uteri pars anterior et dextra, aucta manu ab adhaerentibus secundinis separata, et in sinistrum latus reflexa. Id eo factum est consilio, ut pari membranae decidua ac Placenta, cum vasis carandem cori repletis, et superficies uteri, cui adhaeserant, interna oculis exponderentur. Partes hinc disymodus proxime sequens tabula sicut integras.

Chandler sculp.

## T A B U L A V.

- U**TERI pars anterior et dextra, cauta manu ab adhaerentiis secundinis separata, et in finistrum latus reflexa. Id eo factum est confilio, ut pars membranæ decidua ac placente, cum vasis carundem cera repletis, et superficies uteri cui adhaerent interna, oculis exponerentur. Partes lineis designatas proxime sequens tabula exhibet integras. Priorem autem hic habet locum linearum de sequenti tabula explanatio, ne literæ inscriptæ nimis illam obscurarent.
- A** Femur superius.
- B** De angulis inferioribus partium continentium abdominis, quod superest, in ossa ilium reflexum. Anguli utrinque, peritoneo vasis distincte integuntur; quod vero, ex parte, prefertim in latere finistro, ad cursum vasorum epigastricorum retegendum, exscindebatur.
- C** Ossa pubis supra foramina ischium transverse scissæ.
- D** Ischium procerus ascendentibus transverse scissæ.
- Offa haec pelvis, symphyti pubis sublata, laxa evaserunt; et in latere finistro, ad deficuum uteri in cavum pelvis magis illustrandum, extorquunt fuerunt evulsa.
- E** Arteria inguinæ.
- F** Vena inguinæ.
- G** Arteria epigastrica.
- H** Vena epigastrica.
- I** Arteria obturatoria finistri lateris, epigastrica scilicet ramus.
- KKK** Ligamenta rotunda ex abdomine ad exteriora vasorum epigastricorum descendentes.
- L** Sectio integumentorum et musculorum, in utroque inguine, facta nimis, dum partes pelvis anteriores continentis amovebantur.
- M** Perineum.
- NN** Labiorum pudendi partes imme.
- O** Hymen reliquæ.
- P** Vagina.
- QQ** Clitoridis crura.
- R** Urethra ex parte superiori in longum diffusa et expassa.
- SSSS** Vesica urinaria, anteriorem inferioris extremitatis uteri portionem ambiens.
- T** Vesicæ urinarie cavum, partem ejus anteriorem ab urethra sursum incidendo, oculus subjectum.
- UU** Uteri extremitas parva vel inferior, in cavo pelvis posita. Ea pars quo circundata fuerat margine pelvis, fatis evidenter contracta fuit: quam super uterus statim eminentior evasit, quippe partes que facilius cedunt cum ibi amplectebantur.
- VVV** Uteri facies exterior.
- X** Vaforum spermaticorum in latere finistro chorus.
- YY** Uteri substantia, ad dextrum latus, ab fundo penitus dissecta. In hac sectione vasa refecta occurunt; quod autem ad figuram attinet inordinata, quippe cera friabili adimplata. Venæ coloris sunt lucidioris ac granderes; exiliores arteriae, atque fusæ; fundum versus uteri utræque minores quam in parte inferiori, ubi a lateribus uteri ad placentam tranfibant. Utteri crassitudo cum magnitudine vasorum his in locis proportionis legem quodammodo servat.
- ZZ** Decidua, sive membrana exterior, ramulis venarum ab facie interna uteri ad eam transeuntibus distincta.
- a** Hic decidua vasis refecta et opaca, cauta manu sublata fuit. Nulla hic loci, vel in chorio, vel in amnio, venarum, ex injectione ceræ, species fuit. Altera enim pars per alteram adeo perlacebat, ut fetus cutem distinctor cernere licet.
- b** Externæ superficie placenta portio, hic cera extra venas uteri effusa, illuc venis ipsiæ cera impletæ, a facie interna uteri ad eam transeuntibus interficiens.
- c** Arteria ceræ rubri coloris impleta, quo ab utero abrupta fuit, et, seme circumvoluta, in placentam se immisit.
- d** Ejus partis uteri, quo deciduam (**ZZ**) antea obtexerat, facies interna. In hac superficie venæ quo per deciduam ramos suos diffuderunt, abruptæ conspicuntur.
- e** Ejus partis uteri quo placentam (**bb**) obtexerat facies interna. Hac quidem superficies cera extra vasa effusa specimen pœ se tilit. Quæ autem alpeçtu primo, extra vasa effusio videbatur, re vera, venarum complanatarum, cum anastomosibus frequentioribus, ex utero ad placentam peroblique transeuntum, cera adimplatum, species fuit. Cuius quod sequitur fit specimen.
- f** In substantia uteri vena.
- g** Ejusdem venæ in placentam continuatio.
- h** Utteri facies interna hic cavata, et venæ dimidium, quo cursu peroblique tranfibat, formans.

## P L A T E V.

**T**HE first view of the opened womb. Its substance is cut through on the right side and turned to the left; by which means part of the decidua and of the placenta, as well as the inside of that portion of the womb, are exposed in the injected state. All the parts represented in out-lines are seen finished in the next plate. The explanation is given here, that the other might not be obscured with engraved letters.

- AA** The upper part of the thighs.
- BB** Part of the lower corners of the containing parts of the abdomen turned down over the osseous ilium. They are covered by the vascular peritoneum; which (in the left side especially) was partly cut away, to shew the course of the epigastric vessels.
- CC** The osseous pubis cut through above the foramina ischiæ.
- DD** The ascending processes of the ischia cut through.
- EE** The bones of the pelvis became loose, from the loss of the symphysis at the pubes; and on the left side they were drawn outwards, to shew more fully the descent of the womb into the cavity of the pelvis.
- FF** The inguinal arteries.
- GG** The epigastric arteries.
- HH** The epigastric veins.
- I** The obturator artery of the left side, a branch of the epigastric.
- KKK** The round ligaments descending from the abdomen upon the outside of the epigastric vessels.
- LL** The section of the integuments and muscles in each groin, which was made in removing the anterior containing parts of the pelvis.
- M** The perineum.
- NN** The lower extremities of the labia pudendi.
- O** The remains of the hymen.
- P** The vagina.
- QQ** The crura clitoridis.
- R** The urethra slit on its upper part, through its whole length, and spread out.
- SSSS** The bladder spread round the forepart of the lower end of the womb.
- T** The cavity of the bladder exposed by an incision through its forepart from the urethra upwards.
- UU** The small or lower extremity of the womb, lodged in the cavity of the pelvis. There was a manifest concretion upon that part of it which was surrounded by the brim of the pelvis; above which the womb swelled out immediately, being there embraced by more yielding parts.
- VVV** The outside of the body and fundus of the womb.
- X** The cluster of spermatic vessels of the left side.
- YY** The substance of the womb cut quite through, from the fundus downwards on the right side. In this section the cut vessels bear an irregular figure, which was occasioned by the crumbling of the wax with which they were filled. The veins are of a light colour, and large; the arteries dark, and small in proportion. At the upper part of the womb, both of them are small in comparison with what they are lower down, where they were passing from the sides of the womb to the placenta: and the thickness of the womb bears some proportion to the size of its vessels in these different places.
- ZZ** The external membrane, or decidua, full of small branching veins which passed into it from the internal surface of the womb.
- a** At this place the vascular and opaque decidua was carefully removed: there was no appearance of injected veins upon the chorion, or in the amnion; both of which were so transparent, that the child's skin could be seen distinctly through them.
- b** A portion of the external surface of the placenta, interspersed partly with extravasated wax, from the venal system of the womb, and partly with injected veins, passing into it from the interior surface of the womb.
- c** An artery filled with red wax, which was broken off from the womb. It made one convolution, and plunged into the placenta.
- d** The inner surface of that part of the womb which was in contact with the decidua (**ZZ**). Upon this surface the veins are seen broken off, which dispersed their branches through the decidua.
- e** The inside of that part of the womb which covered the placenta (**bb**). Upon this surface there was indeed some extravasated wax. But the greatest part of what seemed, at first sight, to be extravasation, proved to be injected veins, of a flattened figure with numerous anastomoses, passing from the womb to the placenta in a very planing direction. The following instance may serve as a specimen.
- f** A vein in the substance of the uterus.
- g** The same vein continued into the placenta.
- h** The inner surface of the womb hollowed, and forming half of the vein, which passed here in a very planing direction.

## T A B U L A VI.

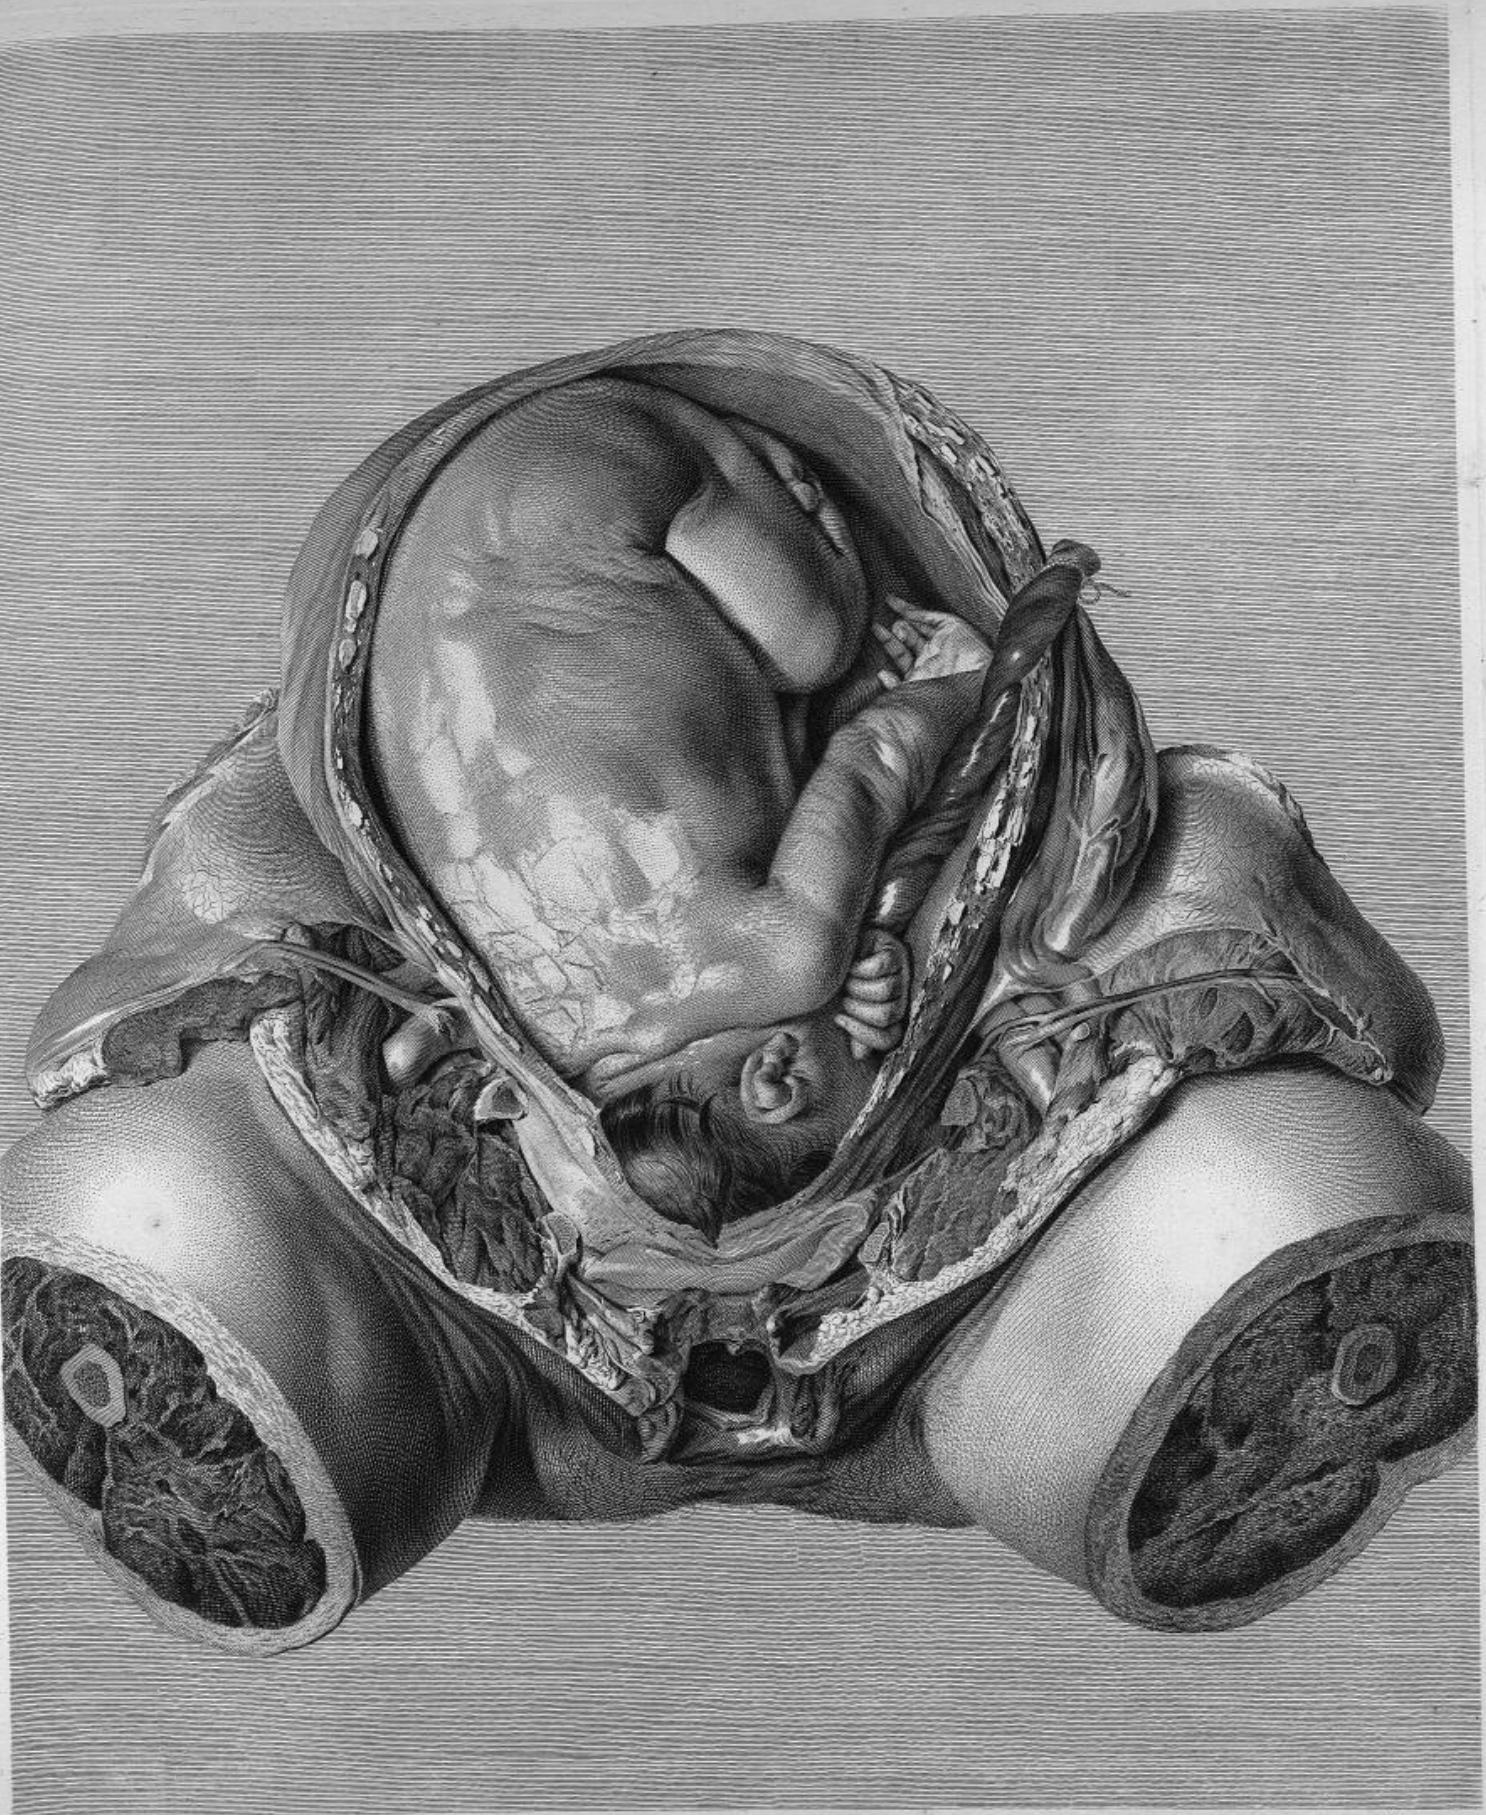

### F O E T U S in utero prout a natura positus.

Omnis hujus figuræ partes, utero et iis quæ in eo continetur exceptis, cædem fere sunt cum iis, quæ, in tabula præcedenti lineis exterioribus, literisque jamjam explanatae sunt. In hoc tantum discrepant, nimurum hic vesica urinaria pars superior omnino sublata est, ad foetus caput in parte uteri inferiori exhibendum. Uteri et secundarum pars anterior, una cum placenta, omnino sublata est. Funis umbilicalis est diffusus, deligatus, et in marginem uteri refecti sinistrorum reflexus. Ad fundum uteri membranae investientes etiam in marginem uteri quo melius possint conspiciri inversæ sunt. Caput foetus in uteri parte inferiori, in pelvis scilicet cavo, ponitur; corpus ejus praecipue in latere dextro jacet. Positio obliqua, vel ad lineam diagonalem appropinquans; unde partes posteriores antrorum sunt et ad matris latus dextrum; partes anteriores retrorūm et ad latus sinistrum versa. Pes dexter inter femur sinistrum et tibiam occurrit. Corpus, uti infantibus denus utero exclusis plerunque fit, muco albo pinguinculo fecundatum; scilicet hic mucus, ad dorfi partem superiorem, ex rugis in corpore foetus, motuque suo lineis intersecta, oculis subjicitur. Representatur quæque pars eodem modo quo primum occurrebat, ne quidem vel digitu articulo deturbato, partem aliquam magis illustrandi, aut tabulam elegantiorem reddendi gratia.

## P L A T E VI

*THIS represents the child in the womb, in its natural situation..*

All the parts of this figure, except the womb, and its contents, are nearly the same as those represented by out-lines in the fifth plate, where they are lettered and explained. The only difference is, that here all the upper part of the bladder is cut away, in order to shew the situation of the child's head in the lower part of the womb. All the forepart, both of the womb and of the secundines, (which included the placenta) is removed. The navel-string is cut, tied, and turned to the left side, over the edge of the womb. At the fundus the investing membranes are likewise turned over the edge of the womb, that they might be more apparent. The head of the child is lodged in the lower part of the womb, or in the cavity of the pelvis; and its body lies principally in the right side. Its position is diagonal or oblique: so that its posterior parts are turned forwards and to the right side of the mother, and its foreparts are directed backwards and to the left side. Its right foot appears between its left thigh and leg. Its body was covered with a white, greasy mucus, which is commonly seen on children at their birth. This is represented at the upper part of its back, where it was intersected with lines, from the wrinkles and motion of the child's body. Every part is represented just as it was found; not so much as one joint of a finger having been moved to shew any part more distinctly, or to give a more picturesque effect.

TAB. VI. *Fetus in utero, prout a natura positus, rescissis omnino parte uteri anteriori,  
ac Placenta ei adhaerente.*

Publ. Nov 15 1774 by Dr. Hunter.

H. V. Rymsdyk didit.

TAB. VII. Sub latto facta pars uteri conspicitur intimus et posterior membranis suis adhuc vestitus.  
Partes tunc adumbratae praeudenti tabula se ad plenum deder.

F. J. Barnard sculps.

## T A B U L A VII.

**S**UBLATO fætu, paries uteri confpicitur intimus et posticus, membranis suis adhuc vestitus. Partes lineis adumbratae in præcedenti tabula se ad plenum dedere.

**A** Partis uteri prædictio verius interna. Hæc nata est a spina, vasis magnis, et præcipue ex aorta, quæ hic loci in arterias duas iliacas se dividit. Pars proœcta, cadaveris situ fupinato adauia, superiore et posticam uteri partem in cava duo lateralia retrorsum dividit. Cavum dextrum, propter obliquitatem hujus uteri, sinistro maius fuit, et maximam fætus partem continuit.

**B** **B** Partes duas eodem modo proœcta, scilicet ob projectionem muscularum psoæ, vaforumque iliacorum. Obliqua hæc juga, uteri cava superiora lateralia ab inferiore azygo, in pelvis polito, fecerunt; in parte hujus ima posteriore oculis subjicitur

**C** Os tincæ, paulo ad latus dextrum versum. Uterus in statu laxo, rugoso, uti fætu vacuus apparebat, repræsentatur. Paries totus internus membranis suis vestitus. Per eas venæ cera impletæ, tales quales in hac figura, distincte se videndas exhibuerunt.

## P L A T E VII.

**A** Fore-view of the cavity of the womb, as it appeared when the child was taken out, and the investing membranes left adhering. The parts which are expressed by out-lines are nearly the same as in plate V. and VI. the first of which may be consulted for the explanation.

**A** An internal projection of the womb, occasioned by the spine and great vessels, especially the aorta which divides at this place into the two iliac arteries. This projection, which is increased by the supine position of the subject, divides the upper part of the womb backwards into two lateral cavities. The right cavity, from the obliquity of the womb in this case, was larger than the left, and contained the greatest part of the child.

**B** Two similar projections occasioned, in the same manner, by the projection of the psoæ muscles, and of the iliac vessels. These oblique ridges divide the upper lateral cavities of the womb, from the azygos lower cavity which is situated in the pelvis; at the lower posterior part of which is seen

**C** The os tincæ, in this case a little on the right side. The womb is represented in the loose rugous state, as it appeared when empty; and its whole internal surface is covered by the membranes. Through these the injected veins were distinctly seen, as they appear in this figure.

## T A B U L A   V I I I .

PARTES proxime post gravidum uterum sit; utero ipso sede sua amoto, et in pudenda devoluto. Offa pubis &c. prius fuerant abscissa, ut in tabula quarta.

ee Eadem vasa ad terminum superiore ligamentum lati, in uterum, tubam, et ovarium se diffundentia.

ff Tuba dextræ pars.

g Ovarii dextri pars.

h Sinistri lateris vasa spermatica.

i Tuba sinistra.

k Ovarium sinistrum.

## P L A T E   V I I I .

A View of the parts which lay immediately behind the womb, and which were in contact with it. They were brought to view by turning down the empty womb over the pudendum; the offa pubis, &c. having been removed, as in the preceding figures.

The thighs and other parts expressed by out-lines, are nearly in the same state as in plate V. where the explanation is given.

AAA The womb.

BBBB The small intestines which lay around, and in contact with the upper part of the womb.

CCCC Those turns of the small intestines (and DDD the mesentery) which lay behind the womb in the left side, between the spine and os ilium, and above the oblique ridge formed by the psoas and iliac vessels.

E The lower part of the intestinum ileon, and (F) its mesentery. It passed between the womb and the bifurcation of the aorta to

G Its termination in the cæcum, where it was covered externally with an appendicula epiploica.

HHH The cæcum, corrugated into cells by its longitudinal fleshy bands, or ligaments.

I The anterior band or ligament of the cæcum.

K The appendix cæci vermiciformis.

L The continuation of the cæcum into the colon.

M The colon and omentum represented in out-lines, where this intestine mounts upwards, and to the left, under the liver.

N The colon in the left side, coming down, from behind the small intestines, upon the inside of the os ilium.

OO The colon passing over the iliac vessels into the cavity of the pelvis, where its continuation is called rectum. It is here suspended by the extremity of the mesocolon which is expanded over the left iliac vessels. At this part the gut was contracted, and involved in fat.

PP The first turns of the rectum in the hollow of the sacrum.

Q The extremity of the trunk of the vena cava, which divides at this place into the iliac veins.

R The forepart of the lowest vertebra of the loins.

S The ligamentous substance between the last mentioned vertebra and the upper part of the sacrum.

T The forepart of the uppermost bone of the sacrum.

U The vena facra.

The parts which are marked Q, R, S, T, U, are seen through the peritoneum that covers them.

V The right ureter, passing over the iliac vessels into the side of the pelvis.

W The common trunk of the right iliac artery.

X The common trunk of the right iliac vein.

Y The right pfoas muscle.

Z The external iliac artery.

a The external iliac vein.

The parts marked V, W, X, Z, and a, were brought to view by fitting the peritoneum which covered them, and dissecting away the cellular membrane at that place.

b The internal iliac vein.

c The left ureter passing in the cellular membrane behind the peritoneum, and before the iliac artery, to the pelvis. This was brought to view, by making a long slit in the peritoneum, and lower part of the mesocolon, and taking away a small quantity of the cellular membrane.

dd The spermatic vessels of the right side, coming down from behind the cæcum and covered by the peritoneum.

ee The same vessels at the upper end of the broad ligament, diffusing themselves into the womb, tube, and ovary.

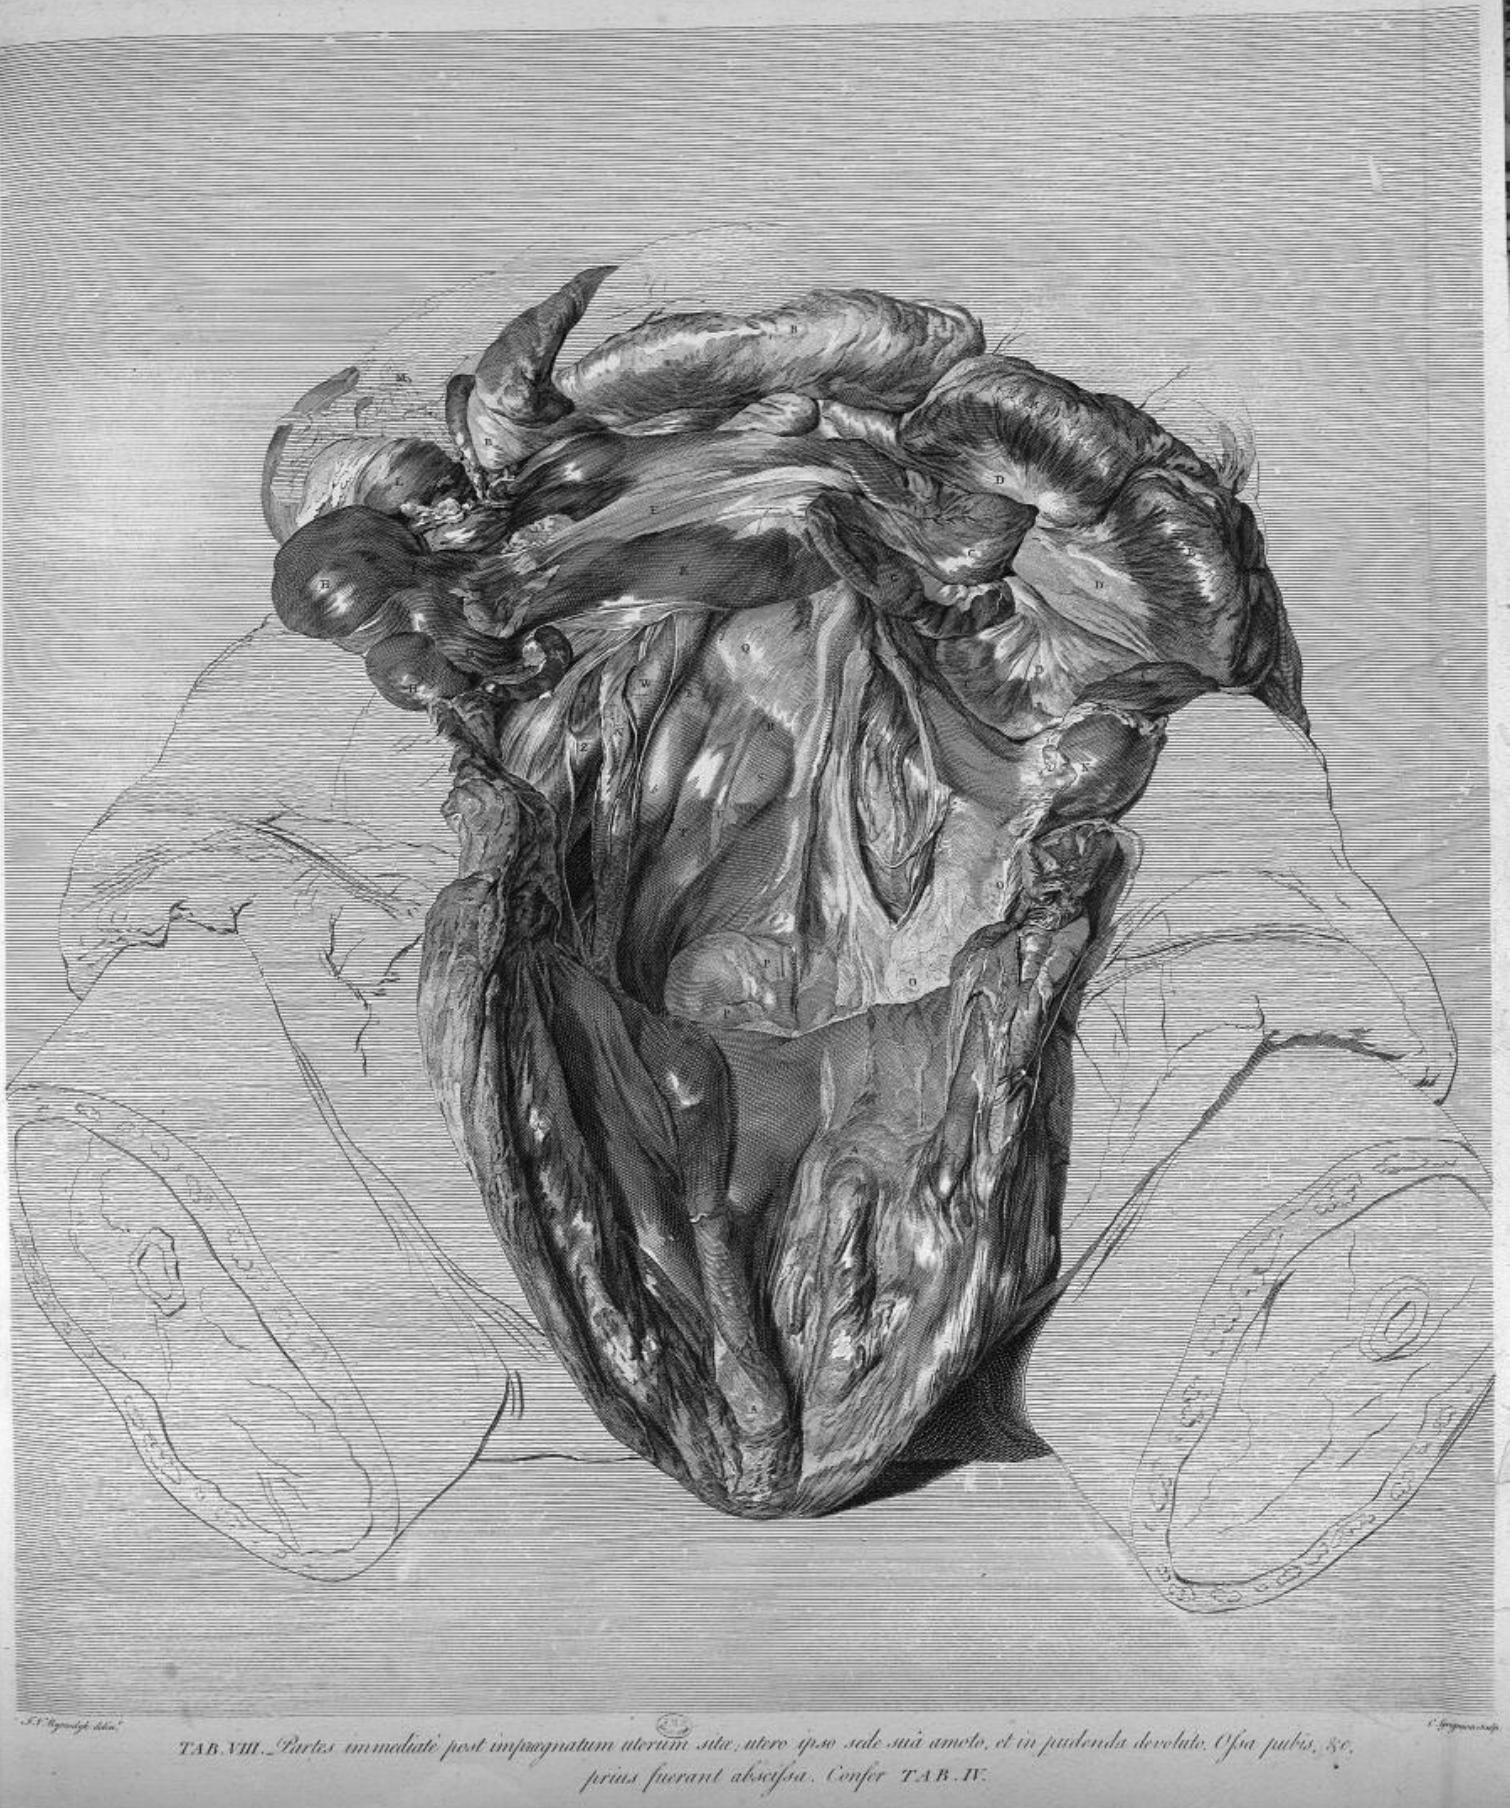

ff Part of the right tube.

g Part of the right ovary.

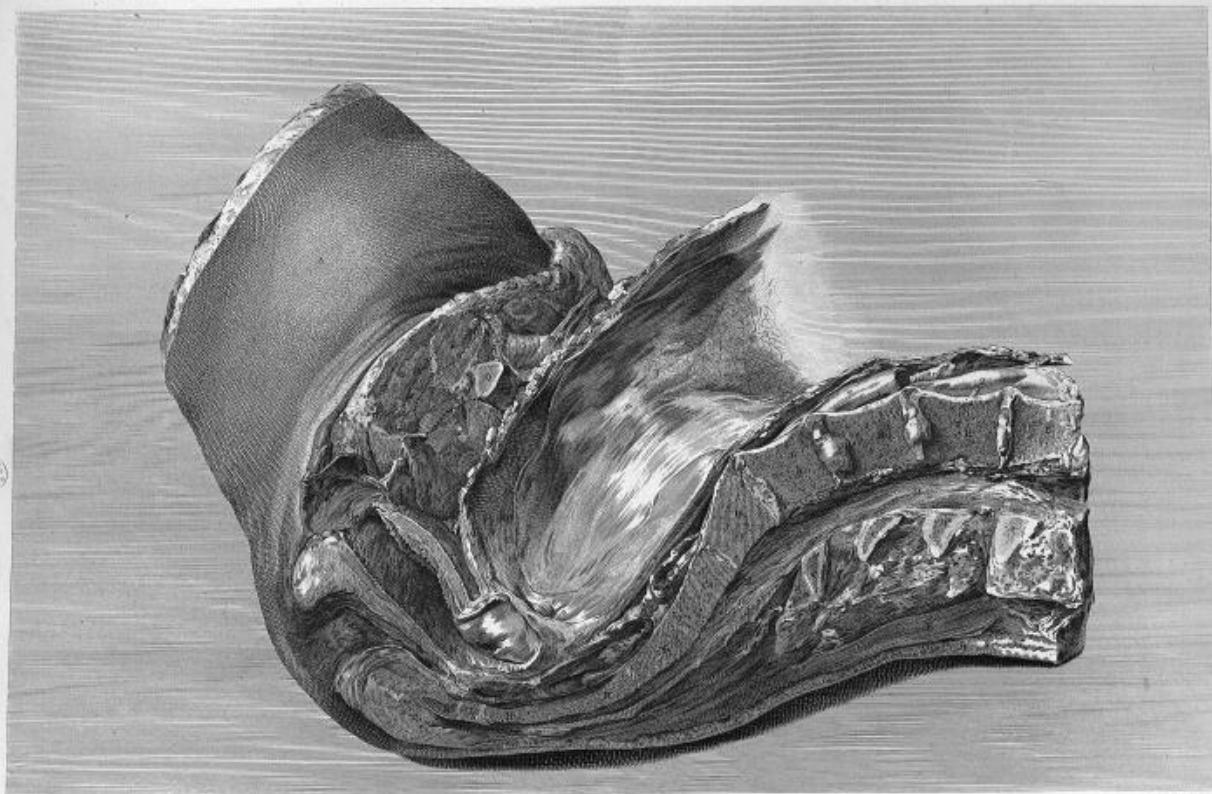

h The spermatic vessels of the left side.

i The left tube.

k The left ovary.

## T A B U L A I X.

**P E L V I S** a latere ad plenum conspecta, una cum contentis ejus, partibusque contiguis; per medium scilicet divisa, ut ossium flexurae, et fuit partium internarum oculo faciliter exhiberi possent. Imperfetta est haec figura ad pubem, extrorum pariter atque introrium. Partes que hic deficient, cultro separatae sunt, dum cadaver ad aliquas tabularum praecedentium pingendas parabatur. Defectum autem abunde supplebit tab. XXII, in hunc finem delineata.

**A** Femur dextrum a parte interiori.

**B B B B** Lumborum vertebrae quatuor inferiores. Has inter cernitur substantia ligamentosa, extans, inaequalis, circa medium preferunt ubi mollissima est, et facile tumescit, si quando facta fuerit, et in aqua macerata.

**C C C C** Vertebrarum earundem processus spinales.

**D** Vertebrarum lumborum canalis, in quo reliquie quedam caudae equinae, obscuræ licet, conficiuntur.

**E E** Musculorum lumbos extendentium partes inferiores.

**F** Lumborum membrana adiposa et cutis.

**G G G** Sacri ossa tria superiora.

**H H** Sacri ossa duo inferiora, primumque coccygis, firmiter coacta.

**I** Coccygis os secundum, quod, ope mediae cartilaginis, ad prius facile moveretur.

**K** Coccygis ossa duo inferiora in unum coalita, parique ad secundum conditum prædicta.

**L** Sacri spina. — *M* Sacri canalis.

**N** Musculorum abdominis et integumentorum anguli inferioris pars, in ossis ilium spinam reflexa.

**O** Vena inguinalis magna epigastricam emittens, quam etiam arteria ejusdem nominis comitatut.

**P** Femoris musculus, ex ossi pubis orti, quique in ossi eo sejungendo fuerant perscissi.

**Q** Os pubis supra foramen magnum difficillum.

**R** Idem os, ubi ramo parvo ischii committitur, difficillum.

In loco quo litera **P** occurrit, lineis punctis adumbrata representant pars ejus ossis pubis, que abscissa fuerat, figura. Nota \* iisdem lineis adumbratam symphysein ostendit.

**S** Pars carnosa anum inter et os coccygis.

**T** Anus omnino apertus.

**U** Recti pars inferior hac sectione exposita. In hac figura videoas, intellimum idem ab anno sursum progrederis oculo dum perquisis, id se retrofum deflexisse, nempe ut ad faciem internam ossis coccygis veniret.

**V** Hic rectum ad latus finistrum se deflexit, folamque membranam suam cellulofam in hac sectione cernere licet.

**W W** Rectum sectione apertum, ubi ante coccygis os primum, facie ossa tria inferiora, decurrebat.

**X** Hic rectum omnino in latere dextro jacebat, nec id aperius fissura.

**Y** Rectum difficilum, ubi de latere dextro ad os secundum facie decurrebat, et in flexuram colli figmōdeam cursum suum tenebat.

**Z** Vena cava. — *a* Arteria iliaca dextra.

**b** In hoc loco vena iliaca sinistra fuerat difficilis; cera autem, que injecta fuerat, utpote fricta, jam delapsa, vena haud fatis clare in conspectum dedit.

Perizelii fistula.

**c** Labii dextri, ad partem inferiorem, facies interna.

**d** Nymphæ dextre, ad partem inferiorem, facies interna.

**e** Coarctatio, hymenice reliqua, ubi incipit vagina.

**f** Meatus urinarius extremitas. — *b b* Vaginae cavum.

In hoc loco vagina et rectum sunt coacta. Rectum vagina densius.

**g** Vagina pars anterior, cum urethra et vesica urinaria conjuncta.

**h** Os uteri in vagina, ad os coccygis vergens.

Quamvis in hoc cadavere fundus uteri dextrorum inclinatus fuerat, os uteri tamen adeo ad dextrum se tenebat, ut cultrum anatomicum has partes fecerant fugeret.

**m m** Ad os tincæ, uteri et vaginae substantia coacta.

**n n** Utteri in duas partes æquales fecili margo posterior.

**o o** Utteri fecili pars anterior. Secilio hoc nequaquam per medium uteri se habebat, sed ad latus dextrum haud paululum; etenim ut figura præcedentes commode possent delineari, cadaver hoc modo necesse habui disponere.

**p** Os uteri intus. — *q* Utteri partes internus membranis suis velutinus.

Fundus uteri in hac figura non repræsentatur; tum quoniam id a proposita ratione alienum duxi, tum quoniam uterus adeo flaccidus et tener tunc temporis erat, ut in situ suo naturali, ad arbitrium et usum pictoris, minime potuerit retineri.

Membranæ, tempore quo tabula hæc delineabatur, ipsæ se ab utero fere profus sejunerant. In parte superiori, decidua, ubi se ab utero receperat, venulis abundavit; juxta os uteri, vix ullum horum valorum velutum apparuit.

Meatus urinæ.

Vesica urinaria pars inferior, uteri cervicem inter et vaginae partem superiori sita. Omnis vesica portio post symphysein pubis sita iamduum abscissa fuerat. Melius autem mihi vilum esset, figuram vel curvatae, quam aliquid ingenio excoagitatum pingere.

## P L A T E I X.

**A** Full side-view of the pelvis with its contents, and adjacent parts, cut down through the middle, to shew the turns of the bones, and the situation of the internal parts. This figure is imperfect at the pubes, both externally and internally; the defective parts having been cut away, in preparing the subject for some of the preceding figures. But what is wanting in these, may be seen in plate XXII, which was intended as a supplement to this.

**A** The inside of the right thigh.

**B B B B** The bodies of the four lowermost lumbar vertebrae.

Between these the ligamentous subflanges are represented prominent, and unequal, especially near the centre, where they are softest and most disposed to swell when soaked in water, and cut through.

**C C C C** The spinal processes of the same vertebrae.

**D** The canal of the lumbar vertebrae in which some remains of the cauda equina is indistinctly seen.

**E E** The lower part of the extending muscles of the loins.

**F** The adipose membrane and skin of the loins.

**G G G** The three superior component bones of the os sacrum.

**H H** The two lowermost bones of the sacrum, and the first of the coccyx, firmly ankylosed.

**I** The second bone of the coccyx, moveable on the first by means of an intermediate cartilage.

**K** The two last bones of the coccyx grown into one, and moveable on the second bone by the intervention of a cartilage.

**L** The spine of the sacrum. — *M* The spinal canal in the sacrum.

**N** Part of the lower flap of the abdominal muscles and integuments, turned over the spine of the os ilium.

**O** The great inguinal vein, sending off the epigastric, which is accompanied with the artery of the same name.

**P** The muscles of the thigh which arose from the os pubis, and which were cut through when that bone was removed.

**Q** The os pubis cut through above the foramen magnum.

**R** The same bone cut through at its conjunction with the small branch of the ischium.

Where the letter **P** stands, is represented, in dotted out-lines, the figure of that part of the os pubis which was cut off, and the mark \* is upon the symphyses in the same out-lines.

**S** The fleshy part between the os coccygis and the anus.

**T** The anus considerably opened.

**U** The lower part of the rectum laid open by the section. In tracing the gut from the anus upwards, we see from this figure that it takes a bend backwards, to get at the inside of the os coccygis.

**V** Here the rectum made a turn to the left side, and its surrounding cellular membrane only was seen in the section.

**W W** The rectum laid open by the section, where it runs before the first bone of the coccyx, and the three lowermost pieces of the sacrum.

**X** Here the rectum lay entirely in the right side, and was not opened by the section.

**Y** The rectum cut through, by the section, where it passed from the right side, across the second bone of the sacrum, and was continued into the sigmoid flexure of the colon.

**Z** The vena cava. — *a* The right iliac artery.

**b** Here the left iliac vein was cut through; but the brittle wax with which it was filled had fallen out, and the vein was seen indistinctly.

**c** The section of the perineum.

**d** The inside of the lower part of the right labium.

**e** The inside of the lower part of the right nymphæ.

**f** The striature at the beginning of the vagina, or remains of the hymen.

**g** The extremity of the meatus urinarius. — *h h* The cavity of the vagina.

**i** The compound substance of the vagina and rectum, the latter of which is considerably the thickest.

**k** The forepart of the vagina united with the urethra and bladder.

**l l** The mouth of the womb in the vagina, directed towards the os coccygis.

Though the bottom of the womb, in this case, was directed towards the right side, its mouth lay so much on the right side, that it was not touched in making the middle section of all the parts.

**m m** The substance of the womb and vagina blended, at the os tincæ.

**n n** The edge of the bifid womb backwards.

**o o** The edge of the womb forwards. This section was not in the middle, but considerably on the right side. It had been made to prepare the subject for some of the preceding figures.

**p** The mouth of the womb internally.

**q** The inside of the womb lined with the membranes.

The bottom of the womb is not represented in this figure; both because it was not very material here, and because it was become so flaccid and tender, that it could not be well kept out, in its natural situation, before the painter.

The membranes were almost entirely separated from the womb, of themselves, when this figure was made. In the upper part the decidua was full of small veins, even where it parted of itself from the womb; but near the mouth of the womb, hardly any such vessels appeared.

**r** The meatus urinæ.

**s** The lower part of the bladder, placed between the neck of the womb and the upper part of the vagina. The upper part of the bladder, which was situated behind the symphysis of the pubes, had been cut away before this section was made; and we chose to leave the figure imperfect, rather than venture to delineate from fancy.

## T A B U L A X.

### F I G. I.

**U**TERI pars anterior et extima, prout se videndum praebuit, omnia fuccata, exhibens faciem vaorum uterinorum, quem illa pra se ferunt, eo loci ubi placenta utero adhaeret.

Vene cera flava implete, ab arteriis, magnitudine, colore lucidiori, anastomosibus pluribus, facile dignoscuntur. Arteriae enim, minores, pauciores, flexuosa, coloris magis luridi hic loci sunt. Arteriae omnes convolutae; pauciores autem videbantur, quia multi earum ramuli, cera flava, venis prius injecta, impletii fuerint. Hujus exemplum unum est ad literam A.

Venas profundius sitas, per uterum fuccatum cernere non licuit; indistincte igitur, nulloque ordine, ita uti vise sunt, delineantur.

### F I G. II.

Facies interna placentae, cuius vasa per funiculum umbilicalem cera sunt repleta.

A Cannula zena in arteriarum alteram umbilicalium inserta, per quam utraque arteria cera viridi impletatur.

B In vena cannula, per quam cera caerulea illi injecta fuit.

C Amnion, in parte quadam placentae, laxum relatum.

D Placentae, qua amnion sublatum est, superficies intima chorio productio cooperata. Hoc in loco rami primi vaorum umbilicalium conspicuntur. Arteriae colore lucidiori facile possunt dignosciri.

Hic arteriae quidem lucidiores, ut in figura, apparet; tunc scilicet earum pellucidis colorem cere injectae viridem lucidorem transmittentibus: In funiculo autem umbilicali altera res habet; quippe vena, in medio posita, undique glutinosa funiculi substantia fuit intacta; unde cera caerulea ad livorem proprium accedens visa est.

E Decidua pars in margine placentae relicta, inque faciem ejus internam reflexa; nempe ut superfcie ejus exterior, utero que adhaerat, vasis parvulis (cera flava per venas uteri impletis) referata, possit exhiberi.

Placenta cera flava ubique turgida, quae substantiam ejus cellulofam adeo implevit, ut in facie interna ubique per chorion transflueret. Cera ubique quasi in grana abiit, quod inde cava naturalia impleverat, indicium certum exhibens: si enim placentam; vasis effusa implevisset, in massas majores, irregulares formatam, se ad compunctionem dedisset. Cera in hanc spongiostam, five cellulostam partem, injecta, placentae crassitudo naturali duplo major evaserat.

### F I G. III.

Mulieris, die secundo post partum extinta, uteri superficie interne pars.

Decem his tabulis jam delineatis, eas statim in lucem edere proposui; et simul hanc tertiam figuram, quasi supplementum, addere, utpote solum quod tunc temporis potui. Diffrimen exhibet inter superficiem uteri (A, B, C) cui membranae adhaerant, et superficiem (D, E, F) cui placenta se immiserat; illam quidem levem et unius formae; hanc autem orificis magnis venarum refertam. Ubi primum haec orificia sub examen venerant, omnia grumis coagulati fanguinis referata comperi, in cavum uteri non nihil extantibus. Utero vero aliquamdiu in aqua macerato, coagula haec magis albida evaserunt; nonnulla exciderunt; et aliqua etiam extraicta sunt, ut venarum orificia clarius monstrari possent. Ita se res habuit, cum figura haec delineabatur.

## P L A T E X.

### F I G. I.

**A** View of the outside of the forepart of the womb, as it appeared when quite dry; exhibiting a specimen of the uterine vessels, at the part where the placenta adhered.

The veins were filled with yellow wax, and are readily distinguished by the largeness, light colour, and frequent anastomoses, from the arteries, which are here smaller, less numerous, serpentine, and of a darker colour. The arteries were all convoluted; but they did not appear to be so numerous, because many of the branches were filled with the yellow wax, which had been thrown into the veins. This is seen, in one instance, at the letter A.

The deeper-seated veins could not be distinctly seen through the dried substance of the womb, and are therefore represented with the same obscurity and confusion which appeared in the object itself.

### F I G. II.

The inside of the placenta, which was injected by the umbilical vessels after it was taken out of the womb.

A A brai-pipe tied into one of the umbilical arteries, by which the two arteries were filled with green wax.

B A pipe in the vein, by which it was filled with blue wax.

C C The amnion left loose upon one part of the placenta.

D D The internal surface of the placenta, where the amnion was removed, covered by a continuation of the chorion: upon this are seen the first branches of the umbilical vessels. The arteries are sufficiently distinguishable by their lighter colour.

They appeared so from being filled with a lighter coloured green wax, and from the transparency of their coats: but on the navel-string it was the contrary; because the vein, being the most central, was covered with a greater thickness of the gelatinous substance of the string, and therefore did not allow the darker-coloured blue wax to be so well seen.

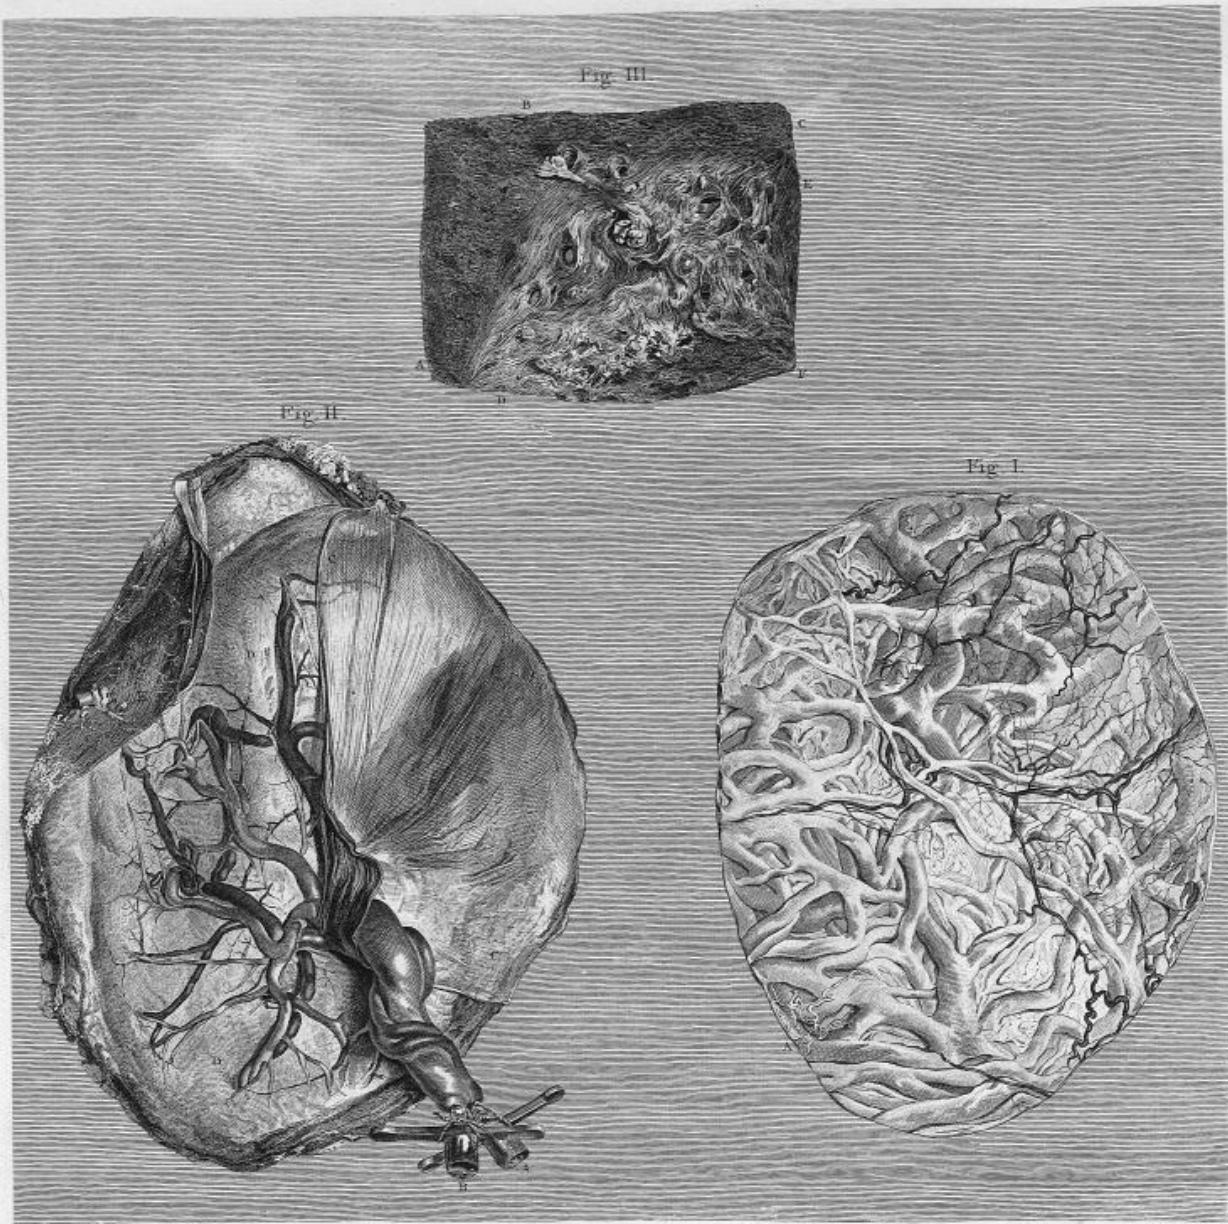

E Part of the decidua left at the edge, and turned over the inside of the placenta, so as to shew its outer surface (which had adhered to the womb) full of small vessels, injected with yellow wax from the uterine veins.

The body of the placenta was uniformly filled with the yellow wax. This had so completely filled all the cellular substance of the placenta that upon the inside it appeared every where through the chorion. And the wax was every where manifestly granulated; so that it had plainly filled natural cavities: for if it had filled the substance of the placenta by common extravasation, it would have formed itself into irregular and large masses. From this injection of the spongy or cellular part, the placenta had acquired at least double its natural thickness.

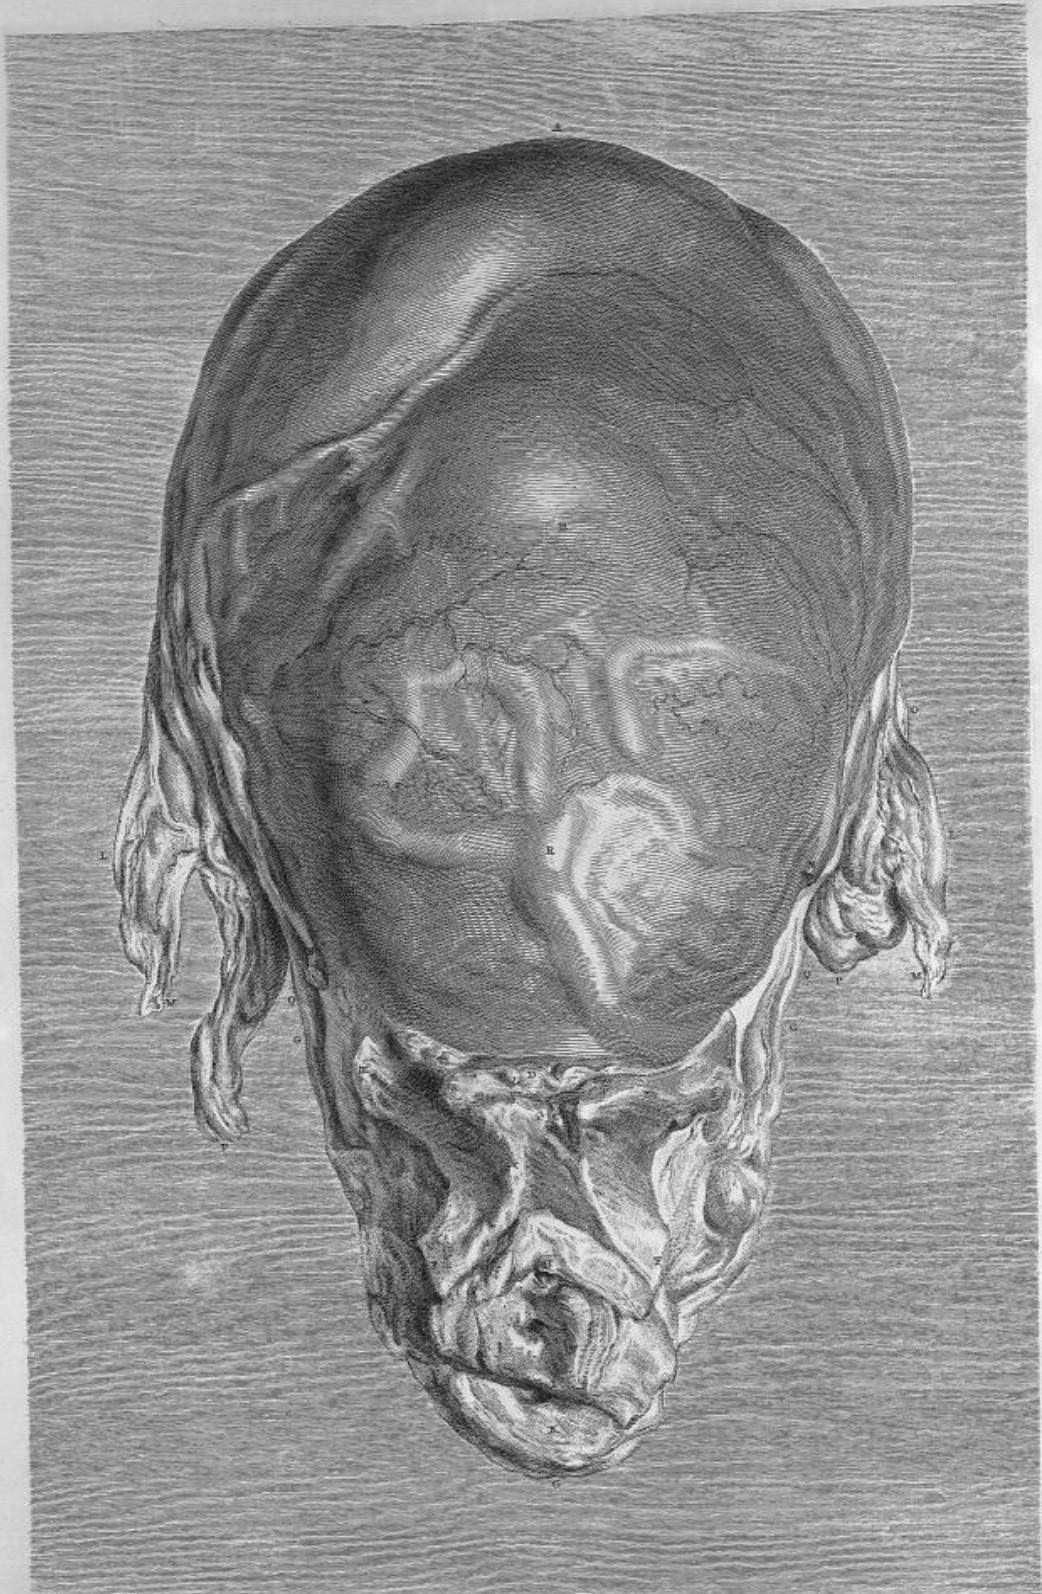

### F I G. III.

A portion of the internal surface of the womb, from a woman who died two days after delivery.

When these ten plates were finished, I intended to have published them immediately; and this third figure was added, as the only supplemement which I could give at that time. It shews the difference between the surface of the womb (A, B, C,) where the membranes had adhered, and that surface (D, E, F,) to which the placenta had been fixed. The first was much more smooth and uniform; the latter was full of large venous orifices. At the first examination all these orifices were found filled up with plugs of coagulated blood, which projected some way into the cavity of the womb. The part being steeped some time in water, they became whiter, and many of them fell out, or were pulled out, to shew the orifices of the veins more clearly. In this state the drawing was made.

TAB. X. Fig. I. Uteri pars anterior et extima, prout se praebuit omnino siccata, exhibens faciem vasorum uterinorum, qualem <sup>T. C. Court. Sculp.</sup> pre se  
 ferunt eo loci, ubi Placenta utero adhaeret. Fig. II. Fasces internae Placentae, cuius vasa per funiculum umbilicalem ocri sunt repleta.  
 Fig. III. Ab aliâ muliere biduo post partum extinctâ, exhibet partem superficie intime uteri.

*J. V. Rymsdyk delin.* TAB. XI. ab aliâ muliere, nono graviditatis mense hemorrhagiâ uterina e medio sublatâ. Conspicuit  
uterus, et ofsa pubis juxta naturam sita. Vasa injectâ corâ turgida, quoque ad partem inferiorem et  
cervicem uteri dignoscentur esse amplissima, arguant Placentam parti illi adhaesere.

## T A B U L A XI.

- A** B alia muliere, nono graviditatis mense haemorrhagia uterina e medio sublata. Conficitur uterus, et ossa pubis juxta naturam sita. Vasa, injecta cera, turgida; quæque ad partem inferiorem et cervicem uteri dignoscuntur esse amplissima, arguant placentam parti illi adhaeruisse.
- A** Fundi uteri pars media et summa.
  - B** Uteri pars qua scilicet in cadavere fuit ex adverso umbilici.
  - C** Symphysis ossium pubis.
  - D** Membrana adiposa ad fundum vesicæ urinariæ.
  - E E** Os pubis utrinque, ad locum fere quo ossi ilium committitur, percisum.
  - F F** Utriusque ossis ischii ramus parvus, ad locum quo ossi pubis adiungitur, percisus.
  - G G G** Contenta pelvis omnia, antrorum ossibus pubis obtecta.
  - H** Infra hanc literam meatus urinarius orificium.
  - I** Ab hac litera sursum ad meatum urinarium vaginæ principium; infraque hanc literam aditus ad rectum.
  - K** Strato intimo ani sphincteris circumclusus.
  - Labia pudendi, perineum et anus hic non habent locum; in situ enim suo relicta erant in cadavere, quippe illud externe mutuum et deforme reddere non licet.
  - L L** Tube.
  - M M** Fimbrie.
  - N N** Ligamenta rotunda.
  - O** Ovarii pars.
  - P P** Vasorum spermaticorum utrinque ad uterus ascendentium fasciculus.
  - Q Q** Vasa hypogastrica, in latere uteri, ad conjunctionem cum spermatis ascendentia.
  - R** Uteri venæ magnæ in loco cui placenta interne adhaerebat.

## P L A T E XI.

*FROM a second subject, viz. a woman who died of a flooding in the ninth month of pregnancy. It represents a fore-view of the womb, with the ossa pubis in the natural situation. The situation of the large vessels, which were injected, shews, that the placenta was attached forwards, and to the lower part of the womb.*

- A** The middle and highest part of the bottom of the womb.
- B** That part of the womb which, as it lay in the dead body, was directly opposite to the navel.
- C** The symphysis of the ossa pubis.
- D** The adipose membrane upon the fundus of the bladder.
- E E** The os pubis of each side, cut through near its union with the os ilium.
- F F** The small branch of each os ischii, cut through near its conjunction with the os pubis.
- G G G** The whole contents of the pelvis covered forwards by the ossa pubis.
- H** Immediately below this letter is seen the orifice of the meatus urinarius.
- I** From this letter upwards to the meatus urinarius is seen the beginning of the vagina; and immediately below this letter I is seen the passage into the rectum, surrounded by
- K** The inner stratum of the sphincter ani.  
The Labia, perineum and anus were left in the body, that it might not be disfigured outwardly.
- L L** The tubes.
- M M** The fimbriae.
- N N** The round ligaments.
- O** Part of the ovarium.
- P P** The group of spermatic vessels, on each side, approaching the womb.
- Q Q** The hypogastric vessels mounting upon the sides of the womb to join the spermatic.
- R** The great veins of the womb in that place to which, internally, the placenta was attached.

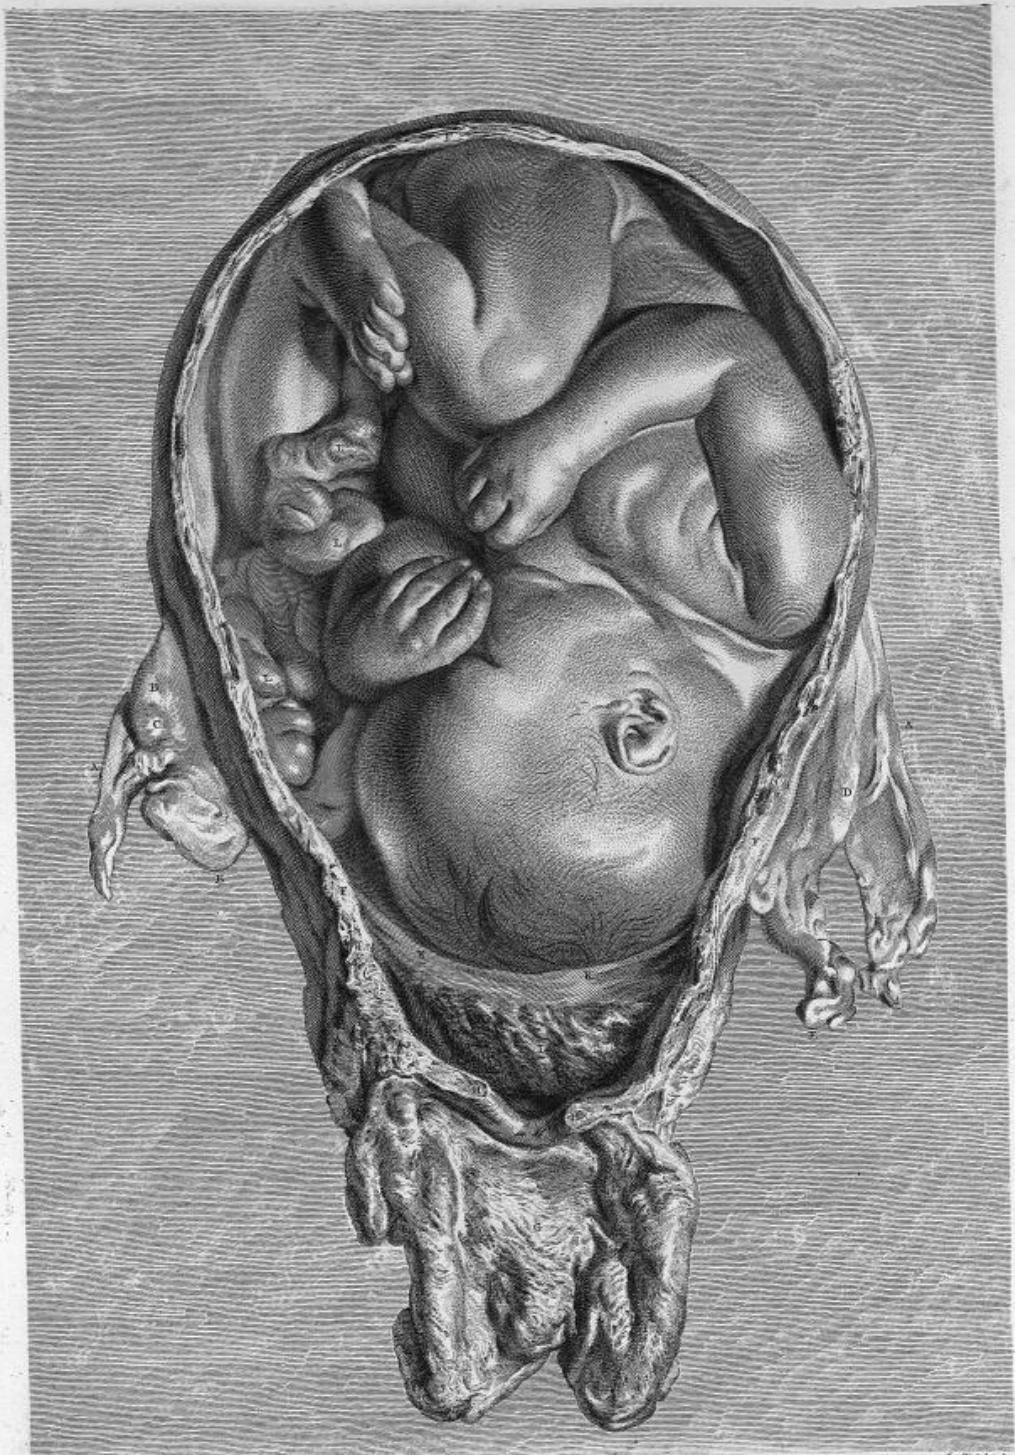

## T A B U L A XII.

- A** B eadem, qua precedens, muliere, exhibet apertum plane a parte postica uterum cum vagina, quo fitus fetus, parque inferior placenta, sub fetu capite, indicarentur. Placenta scilicet orificio uteri interno accreverat, eoque sub finem graviditatis dilatato, separata est: unde haemorrhagia, et mors.
- AA** Tube fallopianæ.
  - B** Ovarium sinistrum; cuius ad extremitatem inferiorem videtur est.
  - C** Corpus luteum extans.
  - D** Ovarium dextrum.
  - E** Vasorum spermaticorum ad uterum ascendentium fasciculus.
  - FFF** Substantiae uteri fecchio.
  - G** Vaginae per incisionem aperta et exparsæ facies interna.
  - HH** Os uteri.
  - I** Placentæ partis inferioris facies externa, in lobos partita, quæ quondam cervici et ori uteri interne adhaeserat; tempore autem parturiendi instante, partium illarum dilatatione sejuncta fuerat, unde necessaria hemorrhagia.
  - KK** Membranae de margine placentæ exentes, capitisque fetus partem inferiorem amplectentes, perfissæ. Spatium, quod inter cervicis uteri partem interiorem, et secundas, vacuum occurrit, in cadavere sanguine coagulato refertum comperi.
- Situs partequæ fetus explanatione non egent.

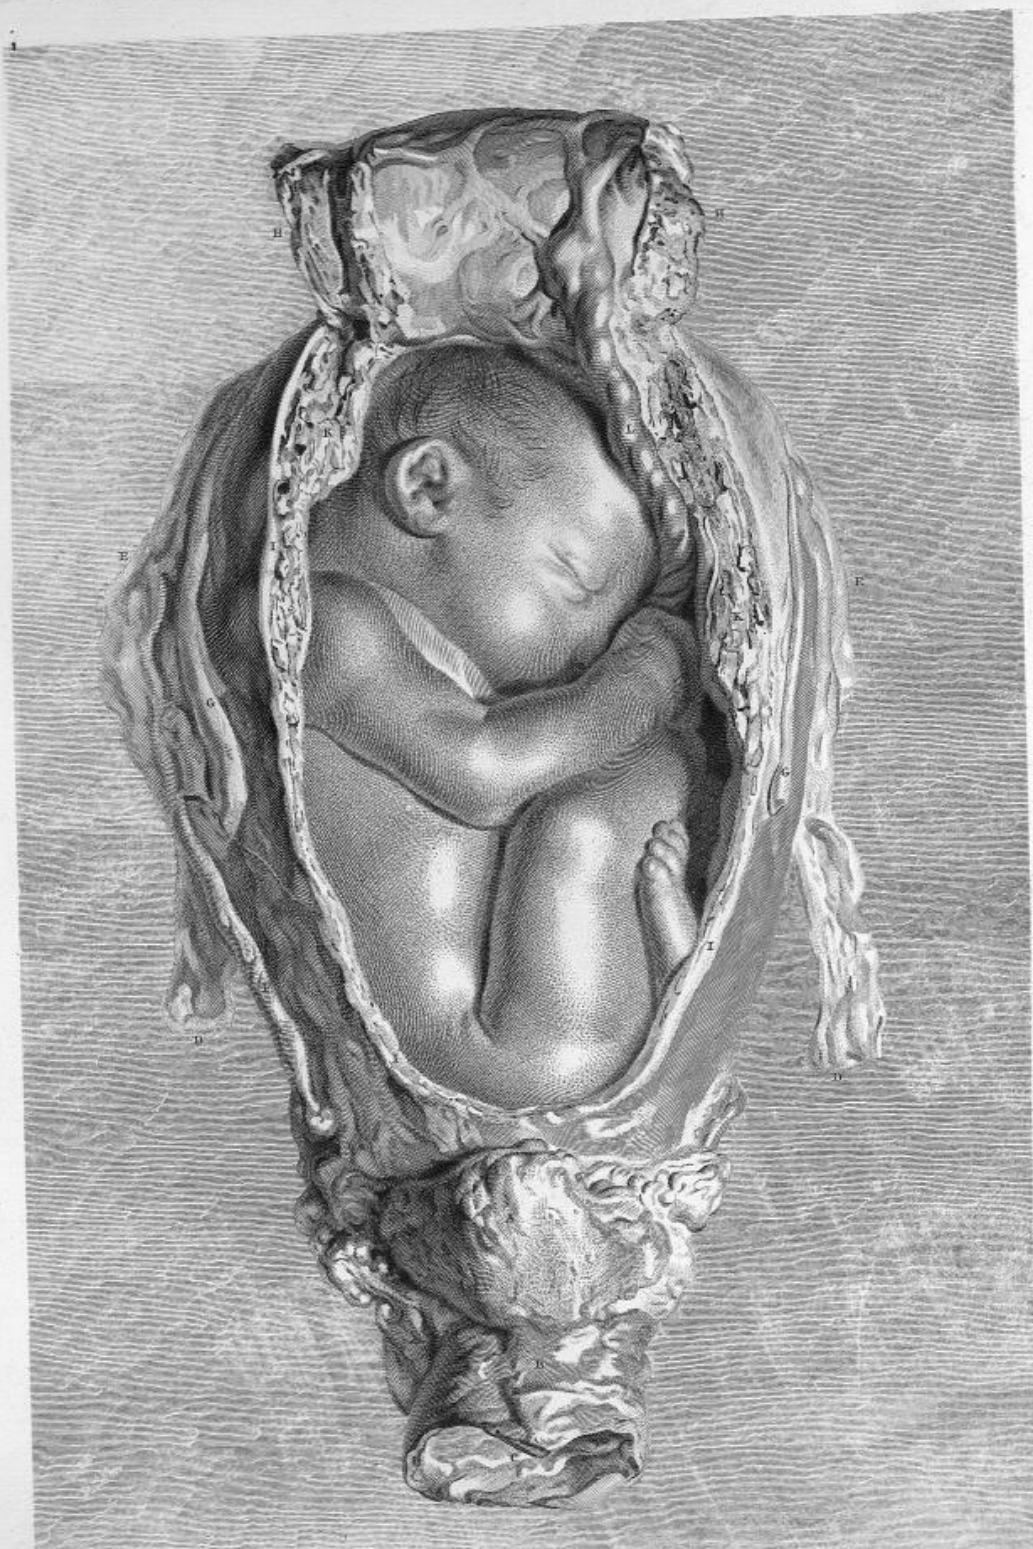

## P L A T E XII.

*FROM the same subject, a view of the womb and vagina fully opened on the back part, to shew the situation of the child, and of the lower part of the placenta at the inside of the mouth of the womb, under the child's head, and detached from the womb; the occasion of the fatal hemorrhage.*

- AA** *The fallopian tubes.*
- B** *The left ovary, at the lower end of which is seen*
- C** *The projecting corpus luteum.*
- D** *The right ovary.*
- E** *The group of spermatic vessels approaching the sides of the womb.*
- FFF** *The section of the substance of the womb.*
- G** *The inside of the vagina, which is laid open by a longitudinal incision, and spread out.*
- HH** *The mouth of the womb.*
- I** *The external lobulated surface of the lower part of the placenta; which had originally stuck to the inside of the neck and mouth of the womb; but as parturition approached, the dilatation of these parts occasioned a separation, which was necessarily followed by an hemorrhage.*
- KK** *The membranes cut through where they were coming out from the border of the placenta, and enclosing the most depending part of the child's head.*  
*The vacant space which is seen between the inside of the neck of the womb, and the secundines, was full of clotted blood in the dead body.*  
*The situation, and the several parts of the child require no explanation.*

*J.V. Rymsdyk delin.* TAB. XII. ab eadem, quia praecedens, muliere, exhibet apertum planum a parte posteriori uterum cum vagina, quo situs Fœtus, parsque inferior Placentæ sub Pectus capite indicarentur. Placenta scilicet orificio uteri interno acreverat, et que sub finem graviditatis dilatata, fatali inde divisione expuncta est.  
*J. Reddelius sculp.* Tab. No. 12. 1774, by Dr. Hunter.

*Scipio de Gobert delin.* *Michael Küsel sculp.*  
TAB. XIII. A tertio cadavere, nono graviditatis mense. Aperto Utero (Vagina et Vesica urinaria integras)  
incisus sedicit, una cum anteriori Uteri pariete, secundinis, ei adhaerentibus, et insundum Uteri reclinatis,  
situs Fetus (qui huc erectus est) conspicitur. Vasa Uteri corporis erant repletu.

Publ. Nov: 15: 1774, by Dr. Hunter.

### T A B U L A XIII.

- A** Tertio cadavere, nono graviditatis mense. Uteri conspectus ab anteriori, cum vagina et vesica urinaria. Pariete hujus anteriori, cum secundis ei adhaerentibus, inciso, et in fundum ejus reclinato, situs foetus erecti conspicitur. Vasa uteri, cera prius injecta, turgida fuerunt.
- A** Vesica urinaria in situ suo naturali, respectu habitu ad uterum.
- B** Vagina pars superior et extima, quae sub symphyse ossium pubis jacet, quoque ibi cum urethra conneicitur.
- C** Vaginae cavum in conspectu positum, cum labia partesque aliae externae fuerant abscissae, quo specimen hoc e cadavere eximiretur.
- DD** Vasa spermatica, ad uteri latera ascendentia.
- EE** Tubæ; quarum extremitates, seu fimbriæ, sub racemo vasorum spermaticorum, occultantur.
- F** In uteri latere dextro, vena magna, ab anastomosi venarum, hypogastricæ scilicet et spermaticæ, ortum suum ducens.
- GG** Ligamenta rotunda.
- HH** Uteri pars anterior, cum portione placenta quæ ei adhaerbat, incisa, et in fundum uteri reclinata, ut fetus in conspectum prodiret.
- III** Uteri substantia, et membranarum investientium, sectio.
- KK** Eadem sectio per placente substantiam ducta, quæ uteri parti anteriori in latere dextro adhaerebat. Ex figura inversa latus extrum finistrum fit.
- L** Funis umbilici, a foetu ad placentam transiens.

### P L A T E XIII.

*FROM a third subject, in the ninth month of pregnancy. A fore-view of the womb (with the vagina and vesica urinaria) in which all the inclosing parts were cut through, and turned up, to shew the situation of the child, with its head upwards. The vessels of the womb had been previously injected.*

- A** The bladder, in its natural situation with respect to the womb.
- B** The upper and external part of the vagina, which lies under the symphyse of the os pubis, and where the urethra is united with it.
- C** The cavity of the vagina exposed, where the labia and other external parts had been cut off, in taking this part from the dead body.
- DD** The spermatic vessels, passing up towards the sides of the womb.
- EE** The tubes, of which the extremities, or fimbriae, are concealed behind the group of spermatic vessels.
- F** The great vein on the right side of the womb, formed by the anastomosing hypogastric and spermatic veins.
- GG** The round ligaments.
- HH** The forepart of the womb, with that part of the placenta which adhered to it, cut up, and turned back over the fundus of the womb, to bring the child to view.
- III** The section of the substance of the womb, and of the investing membranes.
- KK** The same section carried through the substance of the placenta, which, in this case, was fixed to the forepart and right side (which is the left in this inverted figure) of the womb.
- L** The navel-string passing from the child to the placenta.

## T A B U L A XIV.

**A** Quarto cadavere, nono itidem graviditatis mense. Fasciculi fibrarum muscularium, in parte interna uteri, triplici figura exhibentur.

Hac parte uteri per aliquot dies in aqua macerata, decidua jam tenera abstergebatur.

### F I G. I.

Uteri inverfi, et in latus paululum reclinati, facies posterior interna.

**A** Utter os relaxatum; supra quod, paulo obscurius licet, cervicis rugae, ramorum adinflar dispositae, cernuntur.

**B** Utter pars angula, margine pelvis antea circumcincta.

**CC** Seta in orificio utriusque tube; quam circum fasciculi fibrarum ad musculos pertinentium, in orbis, eodem centro terminatos, se disponunt.

**D** Hic fasciculi, in orbem dispositi, uterum cingunt.

**E** Utter fundi pars media, qua ordinis hi duo fibrarum, tubas cingentium, inter se coeunt, sive se invicem contingunt.

**F** Interstitium triangulare, tres inter ordinis fibrarum predictarum, ubi mutuo inter se coeunt, diversumque ordinem et cursum tenent.

### F I G. II.

Ejusdem uteri, forma minuta, conspectus a latere.

**A** Utter os.

**B** Seta in orificio tube.

**C** Fibrarum, fine ordine dispositarum, stratum, faciem internam fasciculorum, qui in circulum flectuntur, obtengentes.

### F I G. III.

Ejusdem uteri partis anterioris facies interna.

**A** Os uteri; supra quod rugae anteriores, in ramos abeuntes, se in conspectum dant.

**B** Superficie cui placenta adhaerat pars media, ubi fibre fascias fine ullo ordine formabant; quas inter, venarum orificia, in placente partem spongiosam cursum tenentium, paucim occurunt.

Ad cervicem uteri, fibre musculofibrae, in fasciculos collectae, nulae conficiuntur.

## P L A T E XIV.

FROM a fourth subject, at nine months. This shews the disposition of the muscular fasciculi on the inside of the womb, in three different views.

The part was steeped in water some days, whereby the decidua was made tender, and then brushed off.

### F I G. I.

The inner surface of the posterior part of the womb, turned a little to one side.

**A** The relaxed mouth of the womb, over which are faintly seen the branching rugae of the neck of the womb.

**BB** The narrow part of the womb, which was embraced by the brim of the pelvis.

**CC** A bristle put into the orifice of each tube, round which the fasciculi of muscular fibres are ranged into concentric circles.

**D** The fasciculi going circularly round the body of the womb.

**E** The middle of the fundus of the womb, where the two orders of circular fibres, which surround the tubes, meet, or become reciprocally tangents.

**F** The triangular interface between the three orders of circular fibres, where they are all blended, and take a variety of directions.

### F I G. II.

A side-view of the same womb, in miniature.

**A** The mouth of the womb.

**B** A bristle in the orifice of the tube.

**C** An irregular stratum of fibres, upon the inside of the circular fasciculi.

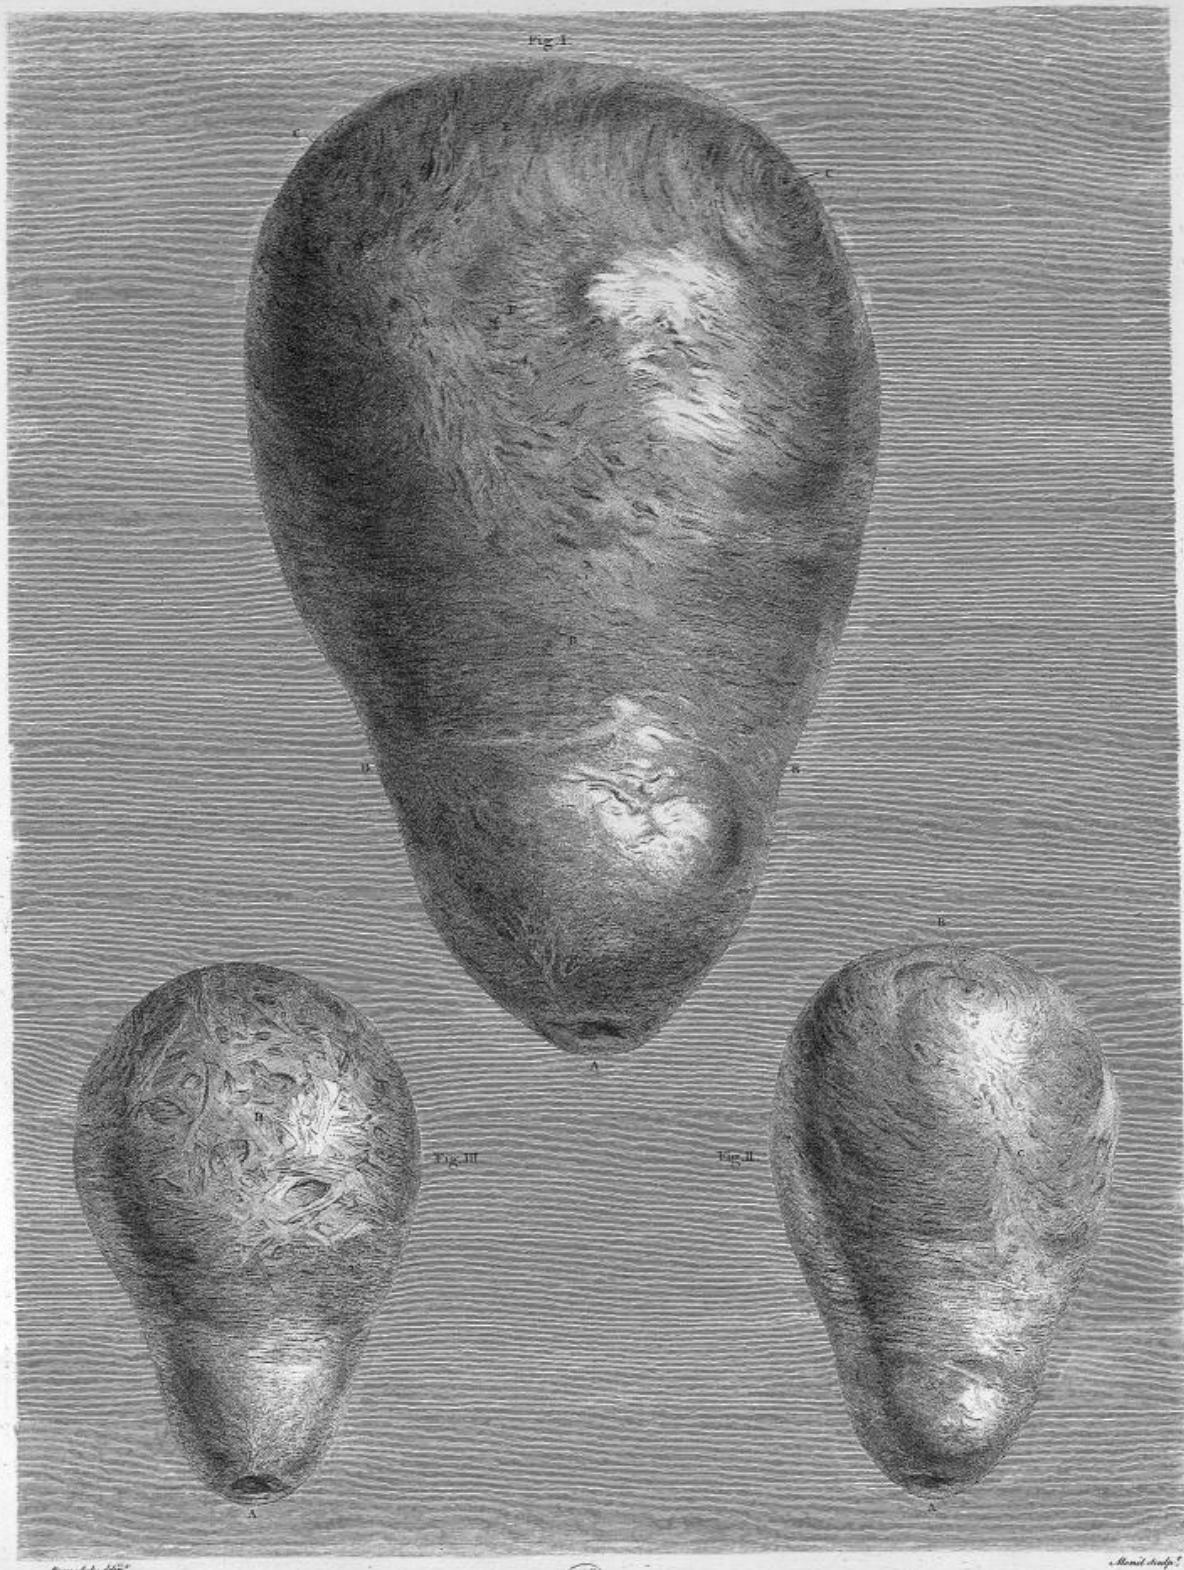

### F I G. III.

The inner surface of the anterior part of the same womb.

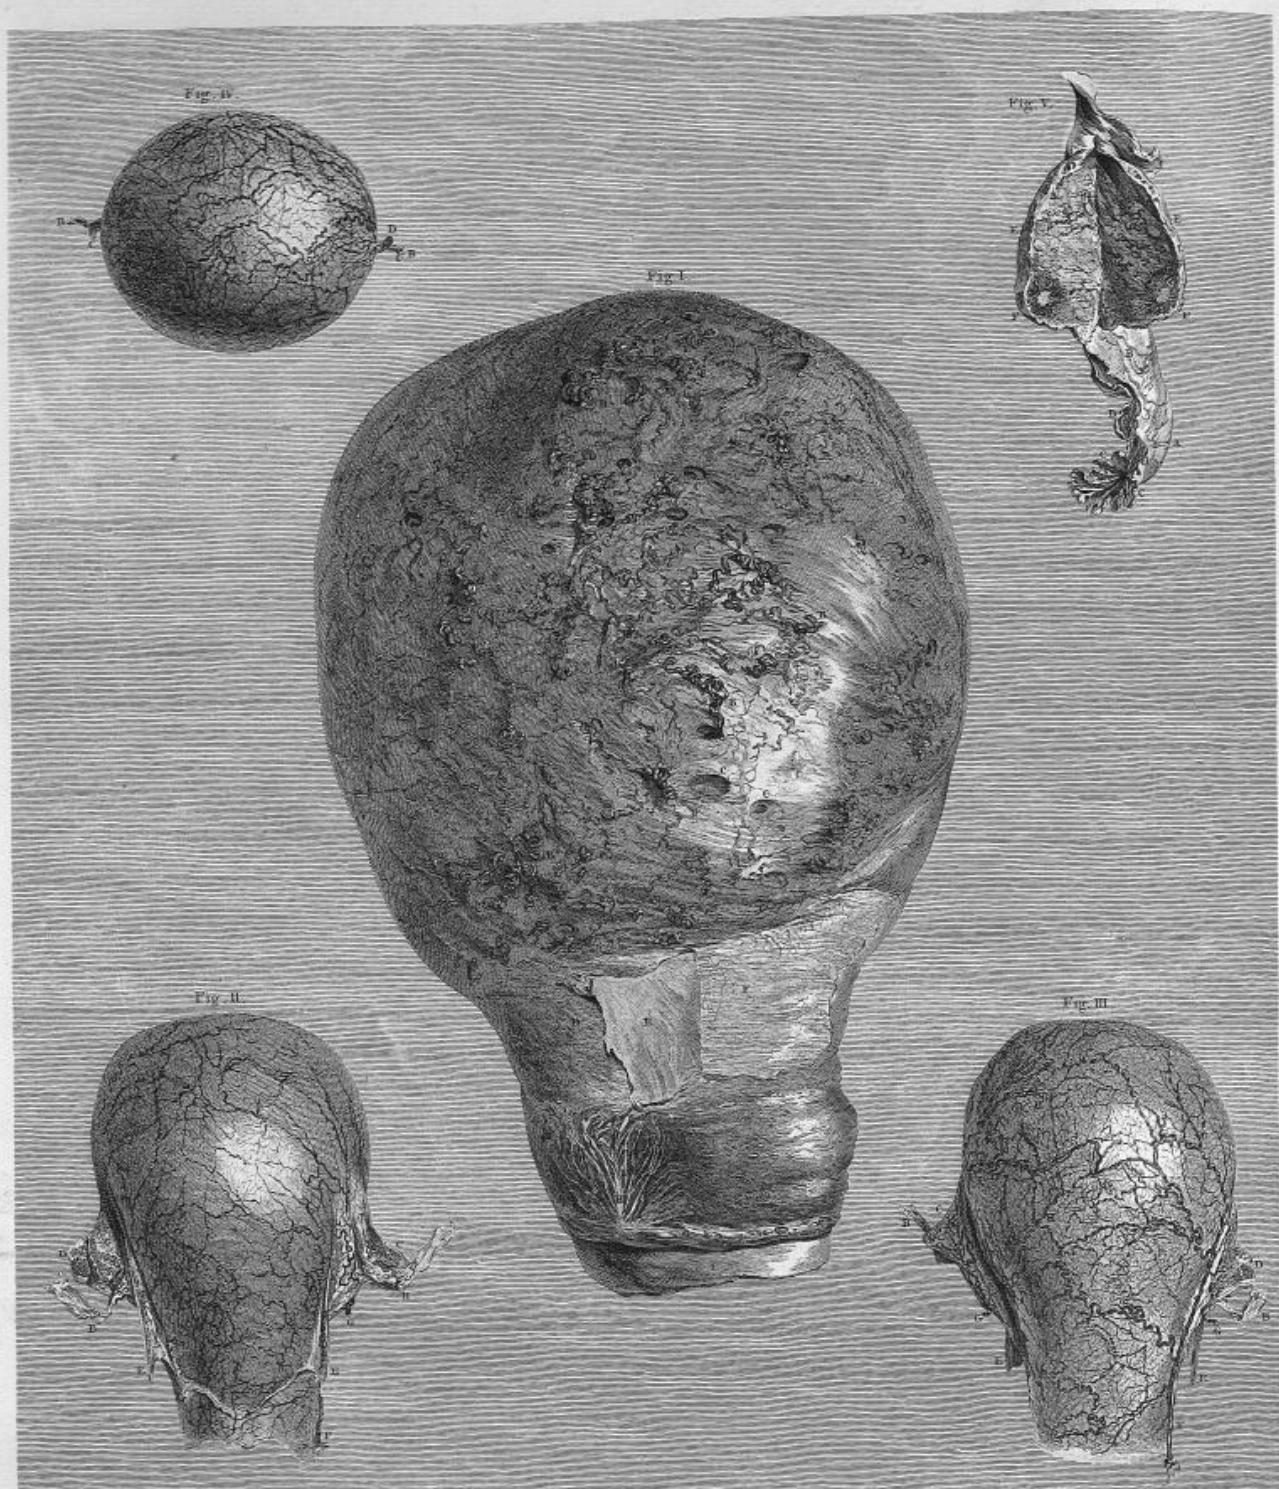

**A** The mouth of the womb: over which are seen the anterior branching rugae.

**B** The centre of the surface to which the placenta adhered, where the fibres formed irregular, interwoven bands; in the interstices of which were the orifices of the veins which went into the spongy part of the placenta.

At the cervix no distinct muscular fibres appear on the internal surface of the womb.

TAB. XIV. A quarto Cadavere, nono itidem graviditatis mense. Fasciculi fibrarum muscularium, in parte internâ uteri, triplici figura exhibentur.

J.S. Kynaston delin.  
 TAB. XV. d'quinto Cadavere, nono etiam gestationis mense. Systema arteriosum Uteri quintuplici figurâ expressum. Fig. I. Fâces Uteri inveni, quo pessertum  
Sculp. J. S. Kynaston  
 loco Placenta adheserat. Fig. II. Arteria partem Uteri anteriorem perreptantes. Fig. III. Eadem per partem posticam distributio. Fig. IV. Eadem Fundum  
 pernantes. Fig. V. Corpus Luteum in Ovario per medium divise, & Timbrie Tuba Fallopiana.

## T A B U L A X V.

**A** Quinto cadavere, nono etiam gestationis mente, sistema arteriorum uteri quintuplici figura expellit.

Mulier haec, post partum, nequitque difficultem, in animi deliquum inciderat, causa quidem adstantes latente; horis autem duabus a partu nondum lapsis, illam mors absfluit. Arteriae cera rubri coloris impletæ.

### F I G. I.

- A** Facies uteri inversa, quo praesertim loco placenta adhaerat.
- B** Pars media superficie, cui placenta adhaerat, in fundi parte polita, et paulo ad latus sinistrum sita.
- C** Arteria convoluta quampurimæ, quarum extremitates, quo loco per deciduam ad placentam decurrerant, ruptæ sunt.
- C** Orificia venarum uteri (vulgo sinus appellata) quo per deciduam ad placentam decurrerant: haec multo plura quam quæ in figura repreäsentantur; minoria praesertim innumeræ. Ex venarum illarum curvæ, uteri felicitate superficie parallelo, sive non prius inflato, orificia vix possunt confici. Earum igitur flatu, difñitarum maxima per delineatur, nimirum ut umbbris inferis, magis confpicie evaderent, et curvæ etiam earum obliquæ, nec non orificia ramorum inter se coenuntum, in conspicuum venirent.
- D** Utteri superficie pars cui membrana adhaerant. Vasa hujus partis, omnia quam minima. Pars etiam ipsa levior, quam ea cui Placenta se immixtæ. Faciet decidua externe perficiam quandam similitudinem præ se ferat.
- E** Utteri internæ lamelle pars, cultro anatomico sublata, et reclinata, ea mente, ut conficerentur.
- F** Utteri fibrarum falciculæ, quorum maxima pars circulos conficiunt.
- G** Oris uteri dilatati margo, vesciculis glutinofusis distinctus.
- H** Cervicis uteri, ad partem posticam, rugæ pennatæ, quo vulva valvulae appellantr.
- I** Vaginae inversæ pars.

### F I G. II.

Arteria partem uteri ejusdem anteriorem percurrentes. Utteri facies externa jam ficcata fuerat, et inde pellucida adeo facta, ut arteriae in conspectu diffinibilem venirent, pariter ac si in superficie extima dispersæ fuissent. Utterus hic duodecim fuit pollices longus: unde facile patet, quantum mole contrahatur in hac figura; quantum etiam in figura terciæ et quartæ, quæ ad eandem normam delineantur. Pars haec dum arefiebat, in longitudinem quam latitudinem magis difñita fuit; quapropter uterum, in hac, et in figura proxime sequenti, longior est quam ex natura.

**A** Peritonei refæcti margo, eo loci, quo, ab utero ad vesicam urinariam refleccitur.

**B** Tube.

**C** Ovarium sinistrum. — **D** Ovarium dextrum. Vid. fig. V.

**E** Ligamenta rotunda; quorum in sinistro est arteria magna flexuosa, ab ramo spermaticæ, per anastomosis conjunctæ cum hypogastrica, transmissa: in dextro aliquo fuit minores.

**F** Truncus arterie sinistri hypogastrica, ad cervicis uteri latus ascendens.

**G** Truncus arterie sinistri spermaticæ, in ligamentis lati duplicationem transeuntis.

Arteriarum distributionem in utero explanare haud opus est. Cursus enim earum flexuosi, anastomosæ plurimæ, per se fatis patent.

### F I G. III.

Eundem exhibet uterum a parte polita vistum.

**B** **B.** **C.** **D.** **E.** **E.** Vid. fig. II. — **F** Arteria hypogastrica dextra.

**G** **G** Arteria spermaticaæ ad ligamenta lata excurrentes.

**H** **H** In ea parte uteri cui placenta adhaerat arteriae flexuose confertæ. Si arterias in hac figura, cum iis in figura precedenti conferamus, eas multo majores, magisque convolutas esse, in latero eo uteri, cui placenta adhaerat, cerneremus. In utero gravido, cursus sanguinis maxime in placentam diriguntur.

### F I G. IV.

Fundum exhibit uteri, parte polita sursum verba.

**B** **B.** Tube. — **D** Ovarium sinistrum.

**C** Ovarium dextrum. — **H** **H** Vid. fig. III.

### F I G. V.

Ovarium dextrum et tuba ejusdem uteri.

**A** Tube. — **B** Tube ligamentum, mesenterio quodammodo respondens.

**C** Tube orificium externum, fimbriis foliæ referentibus circumdatum.

**D** Fimbria a latere utroque orificii tube, per ligamentum, ad ovarii extremitatem externam, continuata.

**E** **E** Ovario jam aperto, arteria flexuosa, per sublantum ejus sparsæ, conspicuntur.

**F** **F** Hac in parte corpus luteum, per medium divisum, in ovarii sublantia cernitur. Nulla conspicuntur vasa in centro, quod colore est albido. Circa centrum illud undique, sublantia ejus valvulus abundat.

## P L A T E X V.

**FIVE** figures, from a fifth subject at the full time, to explain the arterial system of the pregnant womb.

This woman, immediately after a natural labour, grew faint, as was said, without an apparent cause; and died within the space of two hours. The arteries were injected with red wax.

### F I G. I.

- A** The womb, inverted.
- B** The centre of the surface to which the placenta had been fixed; which was at the back-part of the fundus, and a little on the left side.
- B** **B** Innumerable convoluted arteries, with broken extremities, where they had passed through the decidua into the placenta.
- C** **C** The orifices of those uterine veins, commonly called sinuses, which had passed through the decidua to the placenta. These orifices were much more numerous than they are represented in this figure. The smaller especially were innumerable. The passage, or direction of these veins, was almost parallel to the surface of the womb; so that their orifices were scarcely perceptible, without being inflated. Most of them are represented in that state; both that they may be more distinct, by having a little shade, and that their oblique direction, and the orifices of their communications, or anastomosing branches, may be seen.
- D** Part of the surface of the womb where the membranes had adhered. This was furnished with very small vessels only; and was much smoother than that part to which the placenta had adhered. In every respect it was like the outer surface of the decidua.
- E** Part of the inner lamella of the womb, raised by dissection, and turned to one side, to view.
- F** The fasciculated fibres of the womb, most of which, at this place, were nearly circular.
- G** The border, formed by the dilated mouth of the womb, and studded with gelatinous vesicles.
- H** The branching rugæ commonly called valves, at the posterior part of the neck of the womb.
- I** Part of the inverted vagina.

### F I G. II.

A fore-view of the outside of the same womb, after it was dried, and become so transparent, that the arteries could be seen distinctly, as if they had been dispersed on its outer surface. The object was twelve inches long; from which it will be understood, how much the size is reduced, in this, as well as in the third and fourth figures, which are delineated to the same proportion. In drying, the preparation was unavoidably stretched in its length, than in its width; whence in this, and in the following figure, the womb is more oblong, than it is naturally.

- A** The edge of the cut peritoneum, where it was reflected from the womb to the bladder.
- B** **B** The tubes. — **C** The left ovary.
- D** The right ovary. See fig. V.
- E** **E** The round ligaments. In the left there is one large serpentine artery, sent down from an anastomosing branch of the spermatic and of the hypogastric: in the right there are several small arteries.
- F** The trunk of the left hypogastric artery, mounting upon the side of the neck of the womb.
- G** The trunk of the left spermatic artery, passing into the duplicature of the broad ligament.
- The distribution of the arteries upon the womb requires no explanation. Their serpentine course, and frequent anastomoses are apparent.

### F I G. III.

- F** A back-view of the same subject. **B** **B.** **C.** **D.** **E.** **E.** See fig. II.
- G** **G** The spermatic arteries passing into the broad ligaments.
- H** **H** The crowded serpentine arteries in that part of the womb where the placenta adhered.
- By comparing the arteries in this figure, with those in the preceding, we see that they are much larger, and more convoluted, in that side of the womb to which the placenta is fixed; the great current of blood being towards the placenta.

### F I G. IV.

- B** **B.** The tubes. — **D** The left ovary.
- C** The right ovary. — **H** **H** See fig. III.

### F I G. V.

- The right ovary and tube of the same womb.
- A** The tube. — **B** The ligament of the tube, analogous to the mesentery.
- C** **C** The external orifice of the tube, surrounded by foliage-like fimbriae.
- D** The fimbriae continued from each side of the orifice of the tube, all along the ligament, between that and the outer end of the ovary.
- E** **E** The ovary cut open, with serpentine arteries interpersed through its substance.
- F** **F** Here, in the substance of the ovary, the corpus luteum is seen, split through the middle. No vessels appear at its centre, which is of a white complexion; but around that centre, its substance is very vascular.

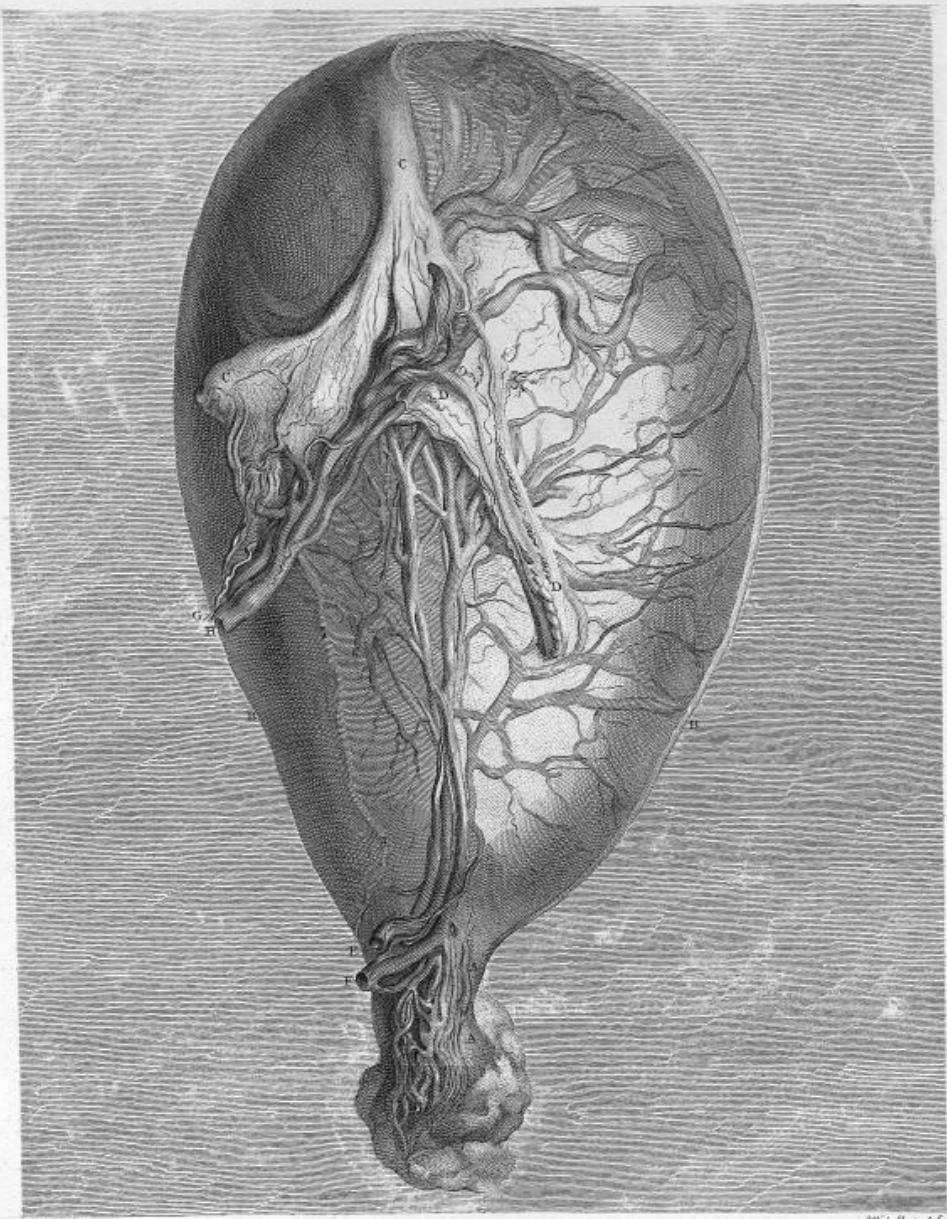

## T A B U L A XVI.

- A** Sexto cadavere, octavo mense, uterus a latere dextro visus, atque ita injecta cera preparatus, et scalpello anatomico denudatus, ut vasorum ad eum accessus, eorumque primae ramifications quam clarissime apparent. A parte postica, adhuc peritoneo levi cooperitus est uterus. In parte autem anteriori, qua placenta interne adhaeret, stratum externum uteri substantiae cultro anatomico sublatum fuit.
- AA** Cervicis uteri, nullo modo dilatati, facies exterior. Os uteri litera inferiori *A* oppositum; ab qua parte deorsum, pars vaginalis, adipe tecta, relinquitur.
- BB** In uteri superficie strictura, ubi margine pelvis antea fuit circumdatus.
- CC** Tuba: post quam ovarium oblitescerat.
- DD** Ligamentum rotundum, cultro anatomico dissectum; nimirum ut vena, ex parte inferiore tortuosa, binaeque arterie convolute, ex vasis spermaticis omnes ortum ducentes, in conspectum venirent.
- E** Arteria hypogastrica.
- F** Vena hypogastrica.
- Vasa haec ramos quam plurimos ad vaginam dimittunt, et per latus uteri ascendent, nimirum ut per anastomosin cum spermaticis suis propriis cœant. Partem utrinque trunci, administrazione infusoria necessario destruant, ingenium pictoris supplevit.
- G** Arteria spermatica.
- H** Vena spermatica.
- Vasa haec dum ad uterum accedunt, ramos quam plurimos, antrorum ad tubam, et retrorum ad ovarium mittunt; deinde, ad uteri latus adventantia, per anastomosin cum hypogastricis cœant. Rami præcipui utriusque, hic, ad fundi uteri partem anteriorem, cui placenta adhaeret, curvum tenent.
- II** Peritonei, posticam uteri superficiem tegentis, margo.

## P L A T E XVI.

*FROM a sixth subject, at eight months. A full view, from the right side, of the womb, so injected and dissected, as to shew the approach, and first general branchings of the uterine vessels. The back-part of the womb is still covered by the smooth peritoneum; but at the fore-part, to which the placenta adhered internally, the outer stratum of the substance of the womb was removed by dissection.*

- AA** The outside of the neck of the womb, which was not in the least dilated. The os uteri was opposite to the lower letter *A*; from which downwards, there is a part of the vagina left, covered with fat.
- BB** A striature on the womb, where it was surrounded by the brim of the pelvis.
- CC** The tube; behind which the ovary lay concealed.
- DD** The round ligament dissected, to shew a vein in its middle (twisted at the inferior part) and two convoluted arteries: all from the spermatic vessels.
- E** The hypogastric artery.
- F** The hypogastric vein.
- These vessels send down numerous branches to the vagina, and mount upon the side of the womb, to anastomose with the respective spermatics. By fixing pipes, for the injection, and tying up these vessels, a part of each trunk was left, and then supplied by fancy.
- G** The spermatic artery.
- H** The spermatic vein.
- These vessels, in their approach to the womb, send up numerous branches, forwards to the tube, and backwards to the ovary; then, passing to the side of the fundus uteri, they anastomose with the hypogastric. The principal branches of both, in this case, go to the fore-part of the fundus uteri, where the placenta was attached.
- II** The edge of the peritoneum which covers the posterior surface of the womb.

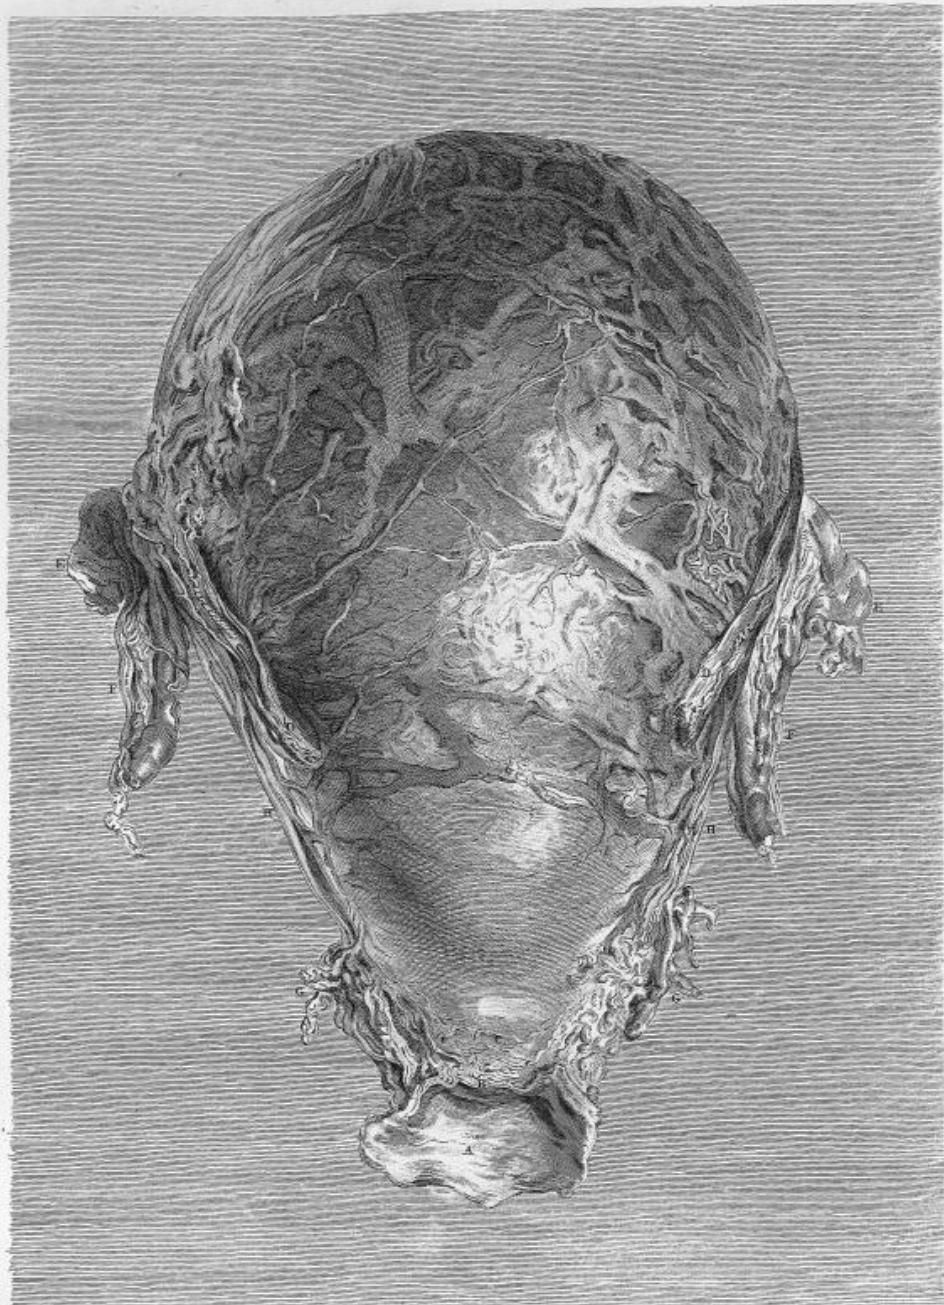

*Eduardo delin.*

*Mitchell sculp.*

*TAB. XVI. A sexto Cadavere, octavo mense. Uterus a latore dextra visus, atque ita  
infecti cori preparatus, et scalpello anatomico denudatus, ut vasorum ad eum accessus,  
et cum prius nimirum quoniam clarissime apparuerint.*

*Pub. Nov: 18. 1774, by Dr. Hunter.*

*J.V. Rymsdyk deo.  
TAB. XVII. Idem Uterus a fronte. Primo sive extimo substantiae strato sublatto, vasorum ampliorum distributio, etrumque versus Placentam (que hic parti anteriori et fundo Uteri adhaerebat) progrclus melius conspicuntur.*

## T A B U L A XVII.

**I**DEM uterus a fronte. Primo, sive extimo substantiae strato sublato, vasorum distributio majorum, eorumque verus placentam (que hic parti anteriori et fundo uteri adhaeret) progressus, melius conspicuntur.

- A* Vaginae extremitas summa, incisione aperta.
- B* Utter orificium contractum.
- C* Utter cervix nondum dilatata.
- DD* Ligamenta rotunda.
- EE* Tube: ovarii pone absconditis.
- FF* Fasciculus vasorum spermaticorum, ad latus uteri ascendentium.
- GG* Fasciculus vasorum hypogastricorum, ad latus cervicis uteri accedentium.
- HH* Trunci vasorum spermaticorum et hypogastricorum, ex anastomosi communes, ad uteri latera decurrentia. In fundi parte anteriori, arteriae et venae, cursum verus placentam tenentes, conspicuntur: vasa minora, rotundiora, magisque convoluta, arteriae sunt; majora, et planiora, venae.

## P L A T E XVII.

**F**ROM the same subject. A direct fore-view of the womb, after the outer stratum of its substance had been dissected off, to shew the distribution of the larger uterine vessels in their way to the placenta; which, in this case, adhered to the fore-part and fundus of the womb.

- A* The upper extremity of the vagina laid open.
- B* The orifice of the womb, contracted.
- C* The neck of the womb, not stretched.
- DD* The round ligaments.
- EE* The tubes: the ovaries being concealed behind them.
- FF* The group of spermatic vessels, mounting up towards the sides of the fundus of the womb.
- GG* The group of hypogastric vessels, coming to the side of the neck of the womb.
- HH* The common, or anastomosing trunks of the spermatic and hypogastric vessels, running along the sides of the womb. On all the fore-part of the fundus are seen the arteries and veins, passing towards the placenta: the smaller, rounder, and convoluted vessels are the arteries; the larger and flattened vessels are the veins.

## T A B U L A X V I I I .

**E**JUS DEM uteri fundus, codem modo p̄paratus, ut am-  
plissimorum vasorum, venarum p̄fertim, placenta ex ad-  
verso objectarum, crēbrā inter se commissurā contemplandie  
prostarent.

**A A** Scētio per fundum uteri tranverse ducta; inter  
**AAB** Utēri parietem posteriorem, in statu suo naturali, (scilicet, pe-  
ritoneo levī copertum) et  
**AAC** Utēri parietem anteriorem, ubi stratum substantiæ ejus exti-  
mum sublatum est, ut vasa, ex adverso placenta sita, confici  
possent. Vasa majora et planiora, ut in figura precedenti, venæ  
funt.

**DD** Tubæ. Post, sive infra eas, ovaria istiusmodi situm habebant,  
qui illa confici non sineret.

**EE** Ligamenta rotunda, deorsum, paulo ante tubas, cursum te-  
nentia.

In hoc cadavere, uteri paries anterior posteriori tumidior fuit;  
ita ut si uterus a vertice deorsum per tubas transfixus fuisset,  
pars anterior, altera major extitisset. Re vera tamen, inter eas  
discrimen haud tantum fuit, quantum in hac tabula videtur;  
quippe uterus, paulo oblique oculo se offerens, plus superficie  
anterioris, quam posterioris, exhibebat.

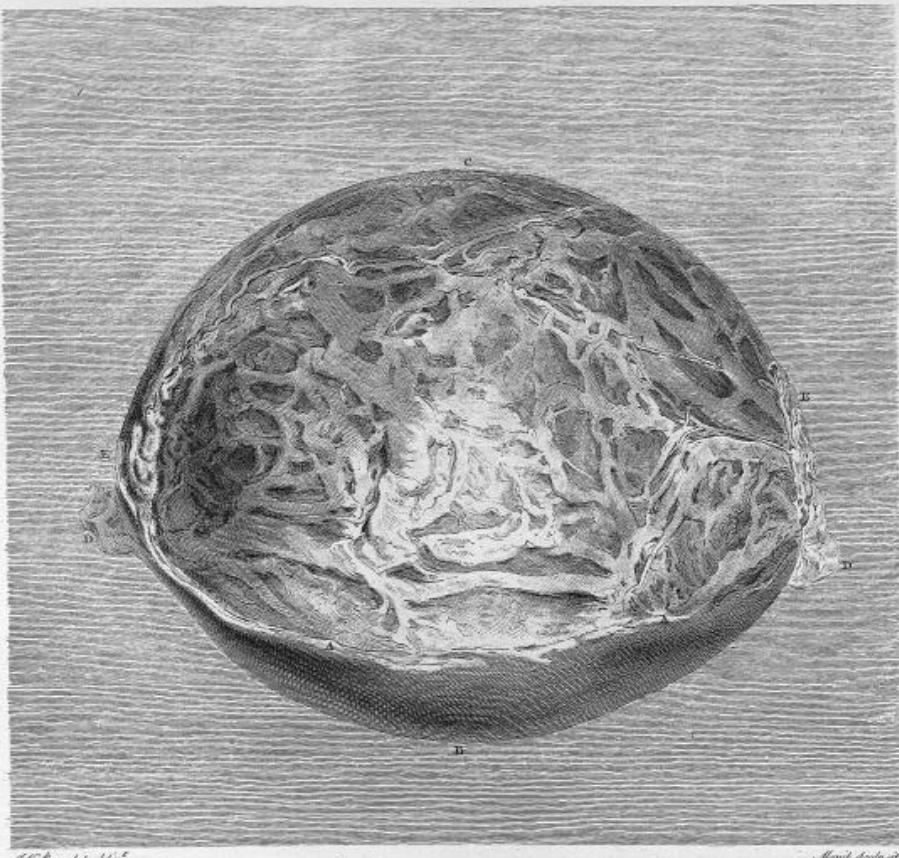

## P L A T E X V I I I .

**F**ROM the same subject. The very fundus, or upper part of the  
womb, which was previously dissected to shew in the preceding figure  
as well as in this, the plexus of large vessels, especially the veins, op-  
posite to the placenta.

**AA** The tranverse section across the fundus of the womb, between  
**AAB** The posterior side of the womb left in its natural state; that is, cov-  
ered with the smooth peritoneum, and  
**AAC** The anterior side of the womb at its fundus, the outer stratum of  
its substance being removed, to shew the vessels opposite to the placenta.  
The larger and more flattened vessels, as in the preceding figure, are  
veins.

**DD** The tubes. The ovaries lay behind; that is, below them in this atti-  
tude, and farther from the eye of the spectator, so as to be hidden.

**EE** The round ligaments, going downwards, a little before the tubes.  
In this case, the anterior side of the womb made a greater swelling,  
or was more stretched than the posterior; so that if the womb had been  
vertically cut down through the two tubes, the anterior portion would have  
been larger than the other. Yet the difference was not so considerable, as  
may be imagined from a view of this figure, because the object was  
placed a little obliquely to the eye, which thence took in more of the an-  
terior, than of the posterior surface.

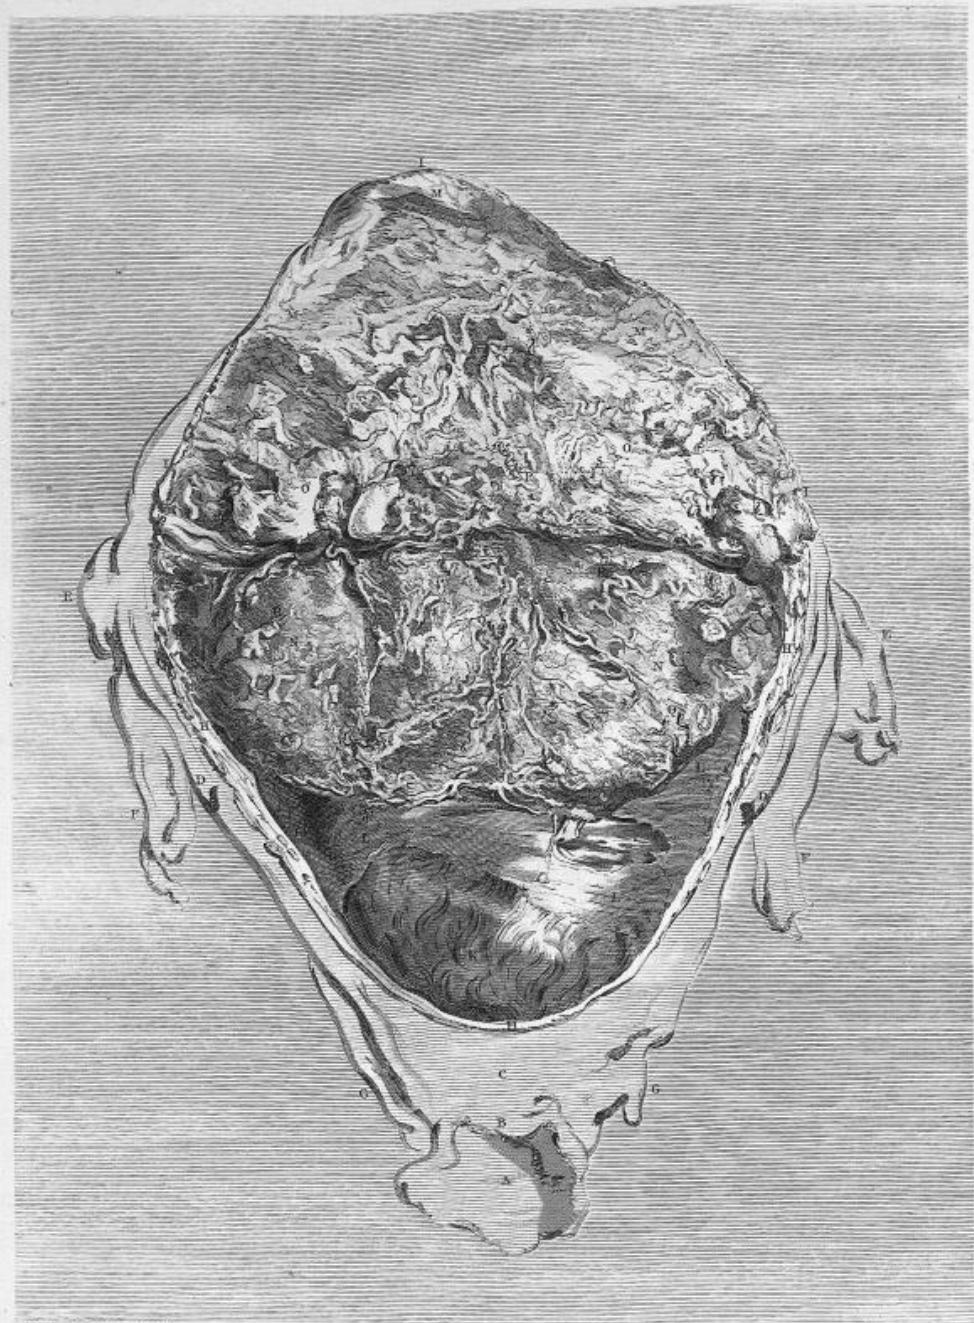

J. F. Rymsdyk delineavit

Morit sculptor.

TAB. XVIII. *Ex eisdem Uteri Fundus, eodem modo preparatus, ut amplissimorum vasorum, Vinarum praesertim, Placentie ex adverso objectarum, frequentes inter se commissuræ contemplande pristarent.*

J. Van Rymsdyk delin.  
TAB. XIX. Idem Uterus: ejus facie anteriori incisa et in Fundum revoluta illasis secundinis, per  
quas caput Fetus, obscurius viset, videtur. Ille igitur visus sese offert cum Superficies externa Placenta  
sed dimidiata, tum pars superficie internæ uteri ei respondens, una cum vasis que inter Uterum et  
Placentam intercedunt. Partes Uteri extenores solis linearum ductibus expressæ sunt.

## T A B U L A X I X.

**I** DEM uteru; ejus facie anteriori incisa et in fundum revoluta, illæfis secundis, per quas caput foetus, obscurius licet, cernitur. Hic igitur viui fœle offert cum superficies externa placente, dimidiata quidem, tum pars superficie internae uteri, ei respondens, una cum vasis que inter uterum et placentam intercedunt. Partes uteri exteriore lineis solummodo exprefſe sunt.

- A** Vaginæ extremitas superior incisione aperta.
- B** Uteri orificium contractum.
- C** Uteri cervix nondum dilatata.
- DD** Ligamenta rotunda.
- EE** Tubæ; ovaria, pone iis sita, oculum fugiunt.
- FF** Vasa spermatica.
- GG** Vasa hypogastrica.
- HHH** Uteri substantia incisa.
- III** Uteri paries anterior a secundis separatus, et supra fundum uteri reflexus.
- K** Chorion, amnion tegens. Per membranas illas pellucidas fetus caput conspicitur.
- LLL** Decidua, qua uteri parieti intimo adhaerebat. Vasa quedam parva, in eam ex utero transmissa, conspicuntur.
- MMM** Uteri superficies interna, parti huic deciduae respondens.
- NN** Superficies externa partis illius placente que ab utero avulsa fuit.
- OO** Superficies uteri interior huic respondens.
- PP** In uteri superficie interna arterie convolute, que ad placentam antea transfrancit, jam vero diruptæ, dum uterus a placenta separabatur.
- QQ** Arteriae in placente superficie illis respondentes.
- RR** Venæ ex placenta substantia excurrentes; in ea scilicet parte superficie ejus diruptæ, qua ad uterum transfrancit.
- SS** Venæ in facie uteri interna, venis proxime dictis respondentes.
- T** In angulo, superficiem exteriæ placente inter et superficiem internam inversam uteri, arteria convoluta, ab utero in placentam continua, conspicitur.
- V** Vena, arteriam proxime dictam juxta posita, et illi respondens, ex placenta in uterum continua.

## P L A T E X I X.

**F**ROM the same subject. A fore-view of the womb. Its substance is cut through and turned up over the fundus, to shew a part of the membranes, through which the child's head is obscurely seen, and about half of the placenta; together with the corresponding internal surface of the womb, and the vessels passing between the womb and the placenta. The external parts of the womb are represented in out-lines only.

- A** The upper extremity of the vagina laid open.
- B** The orifice of the womb, contracted.
- C** The neck of the womb, not stretched.
- DD** The round ligaments.
- EE** The tubes; the ovaries concealed behind them.
- FF** The spermatic vessels.
- GG** The hypogastric vessels.
- HHH** The substance of the womb, cut through.
- III** The fore-part of the womb raised up from the secundines, and turned over the fundus.
- K** The chorion covering the amnion; through which transparent membranes the child's head is seen.
- LLL** The decidua where it adhered to the inner surface of the womb, in which are seen some small vessels sent into it from the womb.
- MMM** The corresponding inner surface of the womb.
- NN** The outer surface of that part of the placenta from which the womb was separated.
- OO** The corresponding internal surface of the womb.
- PP** Convoluted arteries upon the inner surface of the womb, which had passed to the placenta, and were broken through in separating the womb.
- QQ** The corresponding arteries on the surface of the placenta.
- RR** Veins emerging from the substance of the placenta, and broken through at its surface, where they were passing into the womb.
- SS** The corresponding veins on the inside of the womb.
- T** In the angle between the outer surface of the placenta, and the inverted inner surface of the womb, is here seen a convoluted artery, continued from the womb into the placenta.
- V** A corresponding vein, near that artery, continued from the placenta to the womb.

## T A B U L A XX.

**I**DEM denuo uterus, sed omnino apertus, ut foetum in situ naturali ostendat. Circa fundum quaqueversus substantia tam placenta quam uteri incisa conficitur.

Uteri partes exteriores, lineis leviter adumbratae, eadem sunt, que in praecedenti figura, et in tabula decima septima ad plenum sunt expresse.

**A A A** Utero per medium diviso, dimidii inferioris substantiae sectio, ad eam partem scilicet qua membranae adhaerent.

**B B B** Uteri dimidii superioris substantiae sectio, ad partem qua placenta adhaerebat.

**C C C** Placenta sectio; illius cava spongiosa cera flava, ex uteri arteriis, et cera rubra, ex venis impleta sunt.

**D D D** Gyri nonnulli funis umbilicalis, brachia inter et crura foetus positi.

**E E** Sectioni uteri superimposita funis umbilicalis extremitas, ad partem illam placentae, quae foetum prejacebat, excisa.

Fœtus iconem explanare supervacaneum foret.

## P L A T E X X.

**F**ROM the same subject. A fore-view of the womb, fully opened, to shew the child in its natural situation. All around, at the fundus, the substance of the placenta, as well as that of the womb itself, is seen cut through.

The external parts of the womb, slightly sketched in out-lines, are the same as in the preceding plate, and were fully expressed in plate XVII.

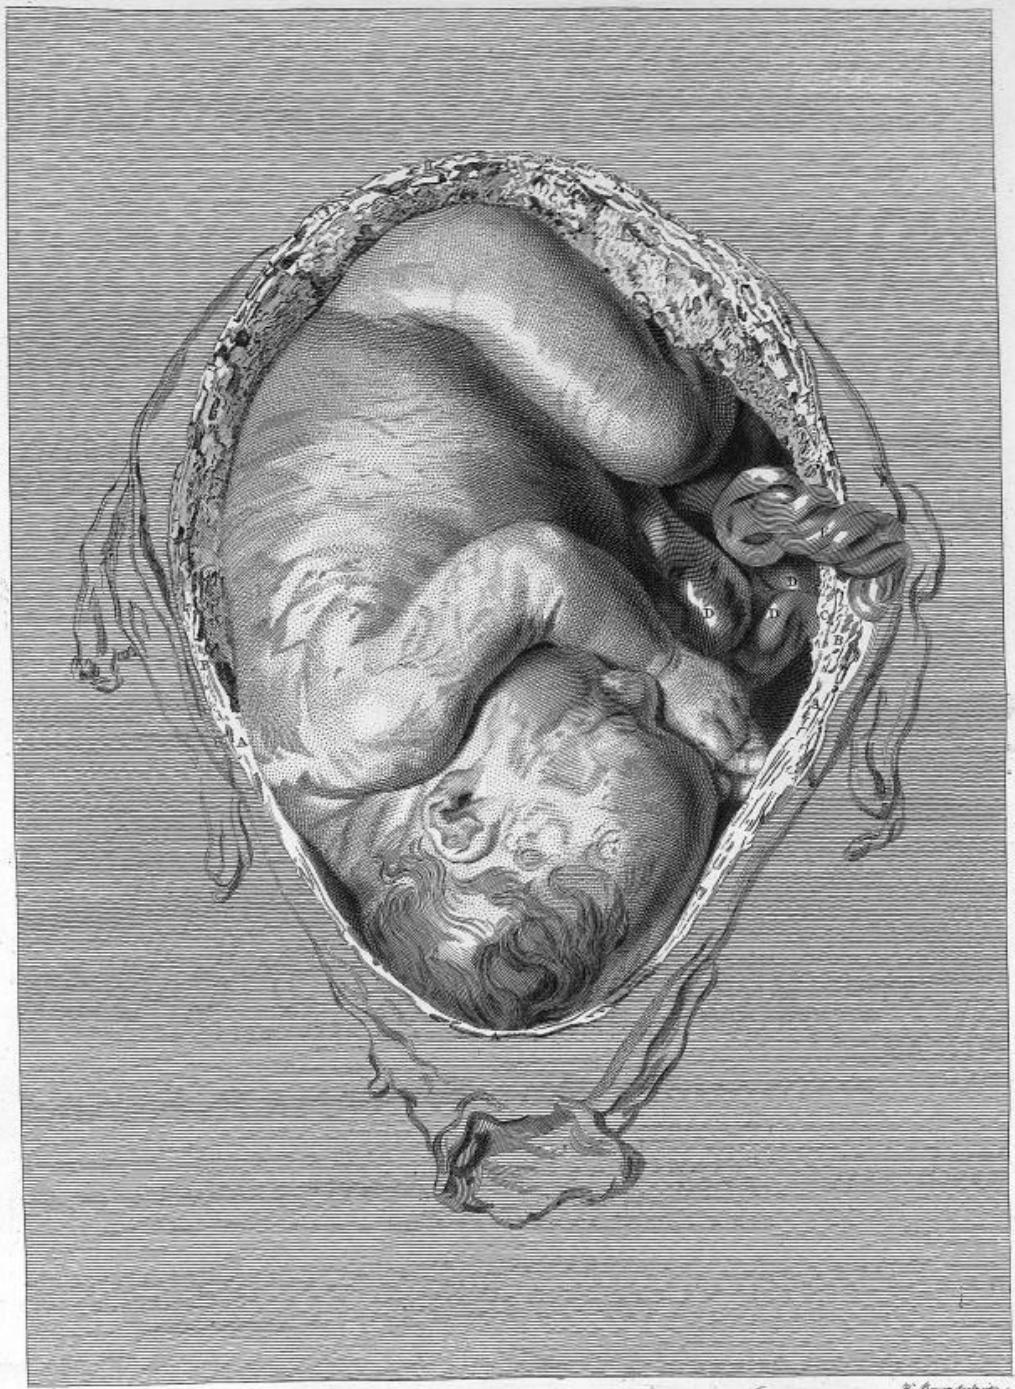

**A A A** The section of the substance of the lower half of the womb, where the membranous part of the secundines adhered.

**B B B** The section of the substance of the upper part of the womb, where the placenta adhered.

**C C C** The section of the placenta: the spongy cavities of which contained both some of the yellow wax, from the arteries of the womb, and of the red wax, from the veins.

**D D D** Some turns of the navel-string, lying between the arms and the legs of the child.

**E E** The end of the navel-string laid over the section of the womb. It was cut off from its attachment at that part of the placenta which lay before the child. The parts of the child require no explanation.

TAB. XXI. A. Septimo cadavere, Septimo graviditatis mense. Aperto cruciformi incisione Utero, & reclinatis rite cornibus, per membranas Fetus continenter Turgit ipse aquis innatans conspicitur. Relique partes nudis lineis distincte sunt.

## T A B U L A XXI.

**A** Septimo cadavere, septimo graviditatis mense. Aperto cruciformi incisione utero, et reclinatis rite cornibus, per membranas fetuum continentis, fetus ipse aquis innatans conspicitur. Reliquae partes nudis lineis distinctae sunt.

- AA** Femora.
- B** Mons veneris, ad partem qua abdominis incisio longitudinalis definit.
- C** Scrofululus cordis, qua abdominis incisio incipit.
- DDDD** Partium continentium abdominis anguli quatuor reflexi, ut vicerat plene patienter.
- EE** Omentum, in latere dextro abdominis.
- FF** Colon, ad latus finistrum abdominis transiens.
- GGG** Intestina tenuia, uteri latus finistrum versus, quorum gyri non nulli, tempore quo cadaver primo apertum fuit, ante uterum jacebant.
- HHHH** Uteri, cruciformi incisione aperti, anguli quatuor, a secundis subitus positis liberati et reflexi, ut contenta ejus in conspectum prodirent.
- I** Uteri superficie intima pars exigua, cui placenta adhaerat, minus quidem complanata, magis autem sanguine imbuta quam pars illa quae membranis vestita fuerat.
- K** Lobi parvi placenta superficies parti proxime dictae respondens.
- L** Membrane liquorem amnii continentis, quae ad partem uteri inferiorem, propter cadaveris declivem situm, fetus partes superiores e confice fere tollunt; ad fundum autem uteri subfidentes, fetus partes satis distincte in confice locant.
- M** In hoc angulo, uterum inter et secundas, pictor id exprimere voluit, quod in cadavere fatis manifestum fuit, scilicet, uter et secundarum substantiam inter se mutuo continuatam: dum autem hanc partem separabamus, tenera illa interneccens membra na, decidua, in duas lamellas abiit; quarum haec utero, illa chorio adhaerebat.

## P L A T E XXI.

*FROM a seventh subject, at seven months. The womb opened by a crucial incision, and the four corners carefully separated, and turned aside from the secundines, so as to shew the child, and waters, through the enclosing membranes.*  
*The adjacent parts of the subject are represented in out-lines.*

- AA** *The thighs.*
- B** *The mons veneris, where the longitudinal incision of the abdomen terminates.*
- C** *The pit of the stomach, where the longitudinal incision of the abdomen begins.*
- DDDD** *The four angles of the containing parts of the abdomen, inverted, to expose the bowels.*
- EE** *The omentum, in the right side of the abdomen.*
- FF** *The colon passing towards the left side of the abdomen.*
- GGG** *The small intestines on the left side of the womb; some turns of which, when the body was first opened, lay before the womb.*
- HHHH** *The four angles of the womb, (which was opened by a crucial incision) separated from the subjacent secundines, and inverted, to expose the contents.*
- I** *A small part of the inner surface of the womb to which the placenta had adhered, more unequal and more bloody than what had been lined by the membranes.*
- K** *The corresponding surface of a small lobe, or extremity of the placenta.*
- L** *The membranes containing the liquor amnii, which, at the lower part of the womb, from the declivity of the object, cover the upper parts of the child from our view; and towards the fundus uteri collapse so as to shew the parts of the fetus not indistinctly.*
- M** *In this angle between the womb and secundines, the artist endeavoured to express what was very apparent in the object, viz. the continuity of the substance of the womb and of the secundines; in parting which, the tender connecting medium, the decidua, separated into two layers, one of which clung to the womb, and the other to the chorion.*

## T A B U L A XXII.

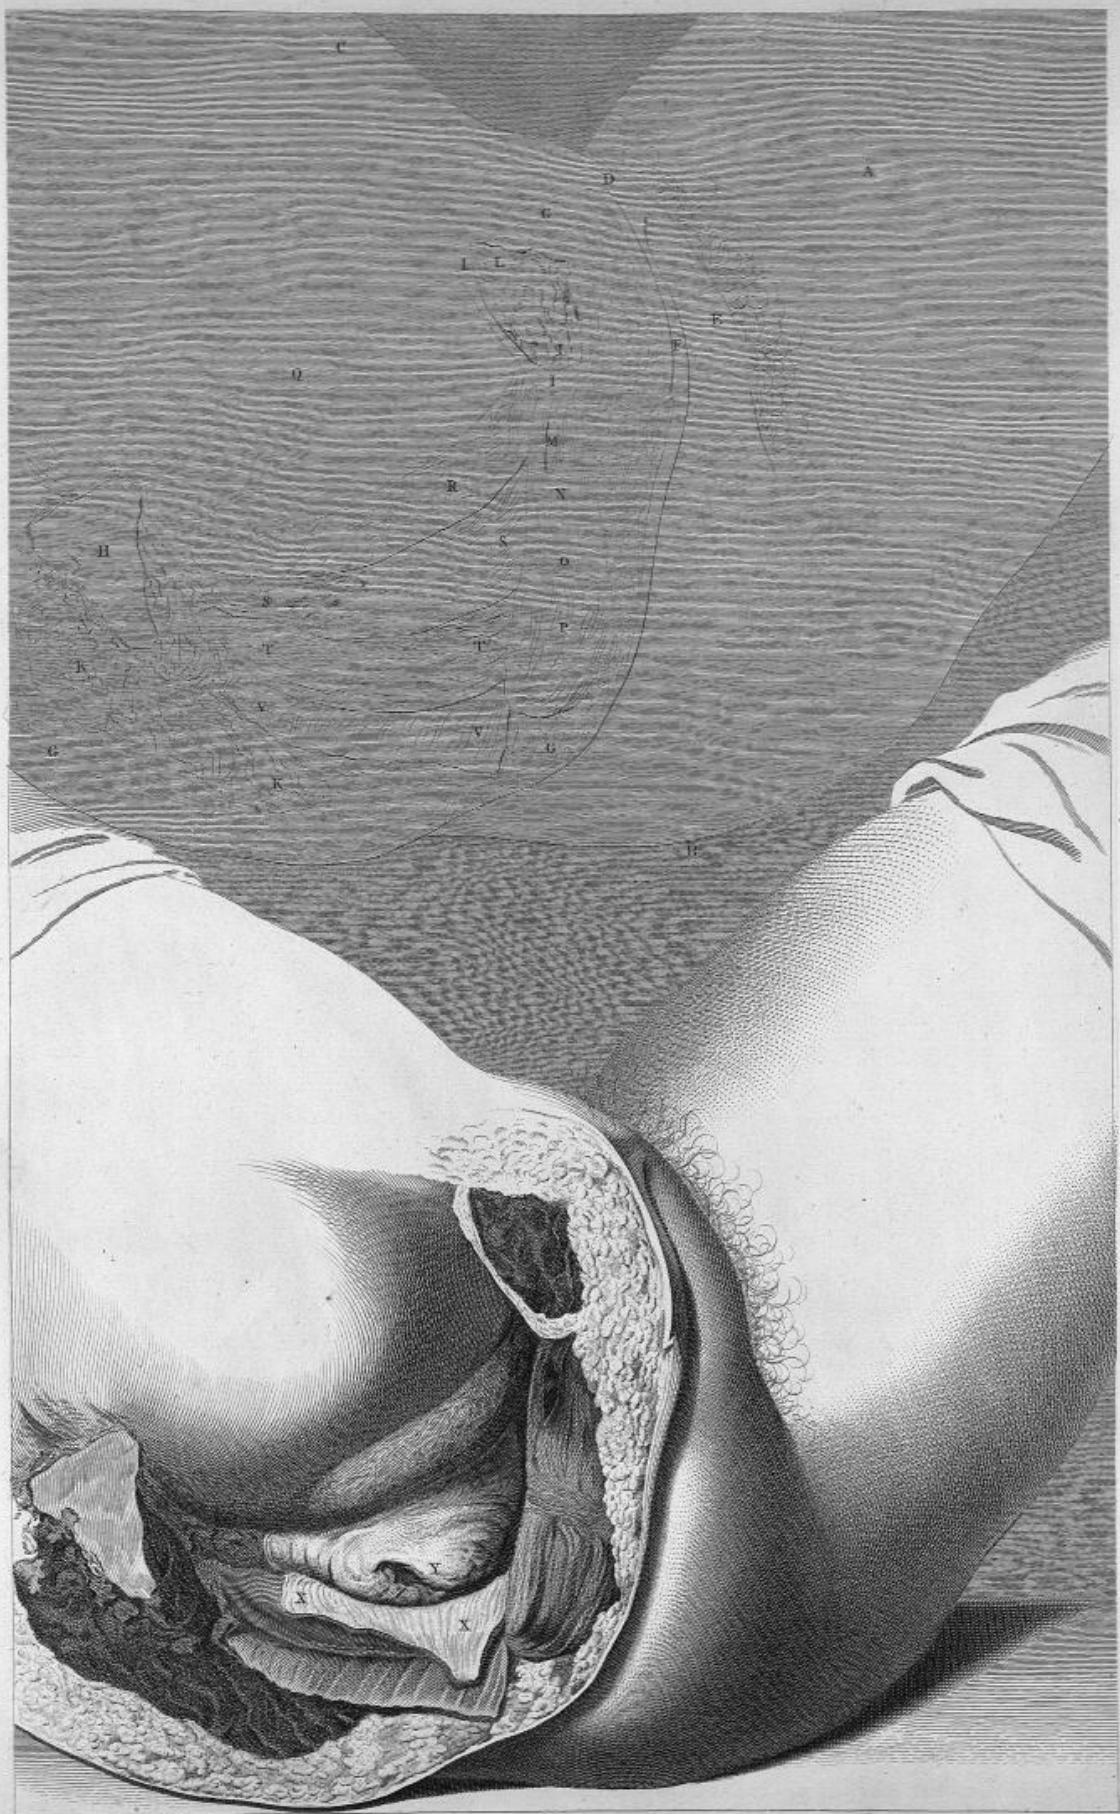

**I**DEM cadaver. Contenta pelvis, quo situ disposita sunt, ex duplice patet figura: in altera, lineis nudis expressa, vaginam integrum vides; in altera, magis elaborata, dextro vaginæ latere diflecto et devoluto, os uteri in confpectum prodit.

- A Femoris sinistri facies interna.
- B Nates sinistrae.
- C Abdominis pars anterior.
- D Mons veneris.
- E Labium sinistrum.
- F Labii dextri pars.
- GGG Cutis et membrana adipose sectio, eo confilio facta, ut in latere dextro, partes continentis pelvis removerentur.
- H Ossis sacri superficies cartilaginea, qua ossi ilium dextro commissa fuerat.
- II Os Pubis dextrum, prope symphyse, transverse scissum.
- KK In pelvis parte postica, musculi externi secuti.
- LL Musculi in facie ossis pubis externa etiam secuti.
- M Clitoridis crus dextrum, ubi ischio, quod hic sublatum est, consernebatur.
- N Vaginae sphincter.
- O Musculus transversalis perinei.
- P Ani sphincter.
- Q Tumor ex utero in cavi pelvis parte superiori.
- R Vesica urinaria, sè vacua, parte anteriori uteri et latere superiori vaginae comprepta.  
Literæ frequentes ad lineas adumbratas spectant.
- SS Vaginae facies externa situ suo naturali vesicam urinariam inter et
- TT Rectum.
- VV Musculi, levator ani scilicet et coccygeus lateris dextri, cultro anatomico a pelvis contentis separati, et in superficiem recifam devoluti.  
Literæ frequentes ad figuram magis elaboratam spectant.
- XX Totius vaginae substantia ex uteri cervice et vesica urinaria excisa et in rectum devoluta, ut os uteri in confpectum produret.
- Y Oris uteri labium anterius.
- Z Ejusdem labium posterius.  
Vagina ad hunc modum aperta, os uteri, nimurum adminiculò suo jam a latere sublato, dextrorum propendebat.

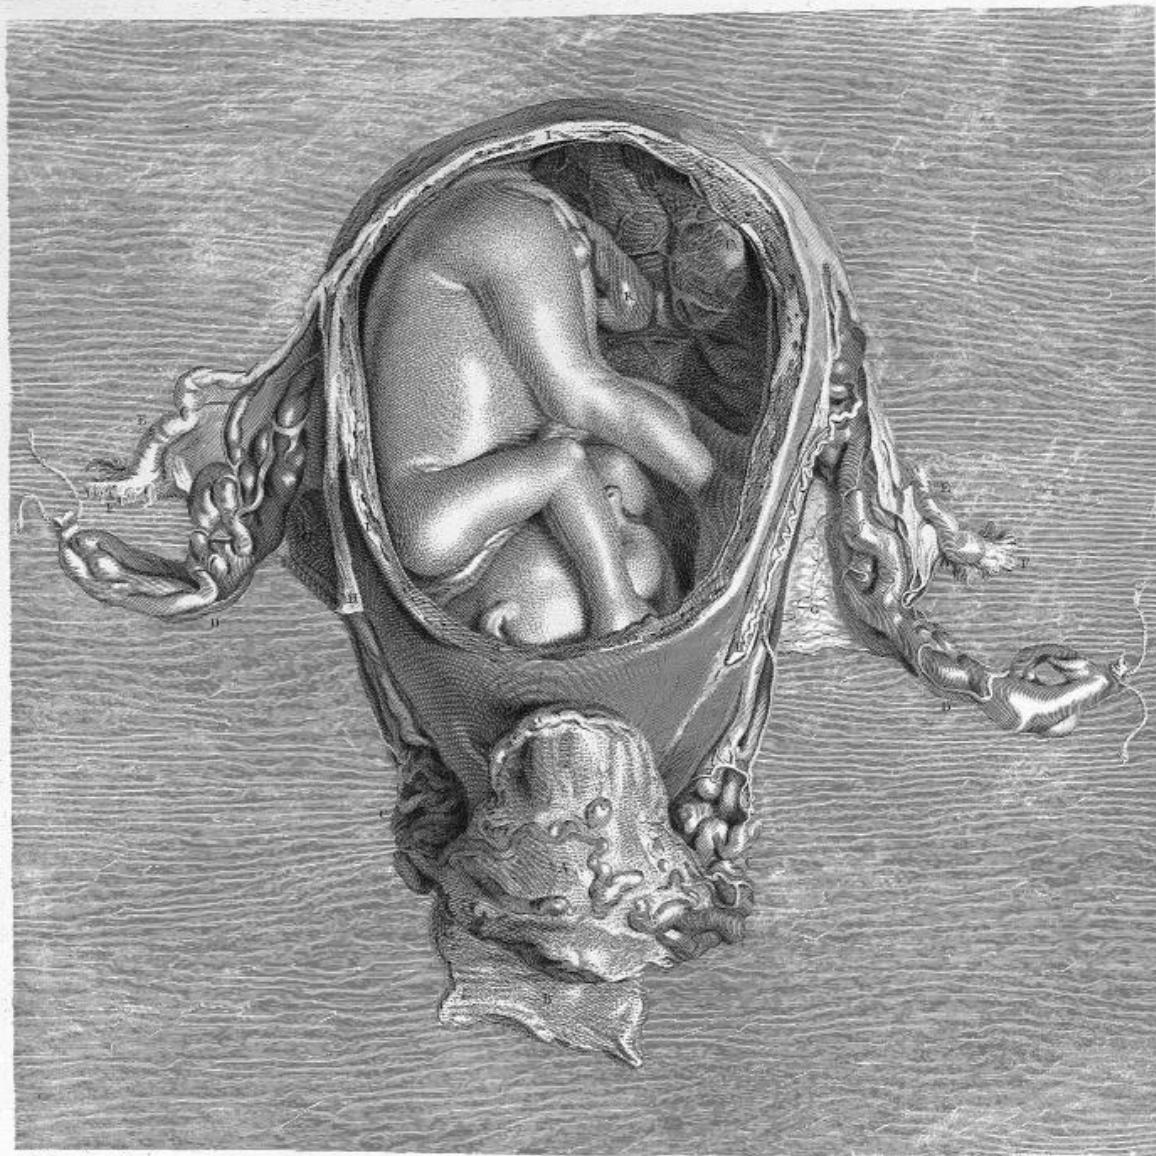

## P L A T E XXII.

**F**ROM the same subject, shewing the situation of the contents of the pelvis. In the figure which is expressed by out-lines, the vagina is whole; but in the more finished figure, its right side is cut out, and turned down to shew the mouth of the womb.

- A The infide of the left thigh.
- B The left nates.
- C The anterior part of the abdomen.
- D The mons veneris.
- E The left labium.
- F Part of the right labium.
- GGG The section of the skin and adipose substance, which was made to remove the containing parts, on the right side of the pelvis.
- H The cartilaginous surface of the sacrum, by which it was joined to the right os ilium.
- II The right os pubis, cut through near the symphysis.
- KK The external muscles, on the back part of the pelvis, cut through.
- LL The muscles which lie on the outside of the os pubis, cut through.
- M The right crus clitoridis, where it was fixed to the ischium, which is removed.
- N The sphincter vaginae.
- O The transverse muscle of the perineum.
- P The sphincter ani.
- Q The swelling formed by the womb, in the upper part of the cavity of the pelvis.
- R The bladder, almost empty, compressed between the anterior part of the womb and the upper side of the vagina.
- The following letters refer only to the figure of out-lines, viz.
- SS The outside of the vagina in its natural situation between the bladder and rectum.
- TT The rectum.
- VV The levator ani and coccygeans muscles of the right side, by division turned down from the contents of the pelvis over the cut surface.
- The following letters relate only to the more finished figure, viz.
- XX The whole substance of the vagina, in the right side, cut from the neck of the womb and bladder, and turned down over the rectum, to shew the orifice of the womb.
- Y The anterior lip of the orifice.
- Z The posterior lip of the same.  
When the vagina was thus opened, the lateral support being removed, the os uteri pushed out towards the right side.

*Bidog. Sculp.  
TAB. XXII. Idem Cadaver Contenta Pelvis, quo situ disposita sunt, ex duplice patet figura:  
In illa elaboratori, dextra Vagina latere dissecto & devoluto, os Uteri in conspectum prodit.

TAB. XXIII. Octavum Cadaver, Sexto Gestationis mense. Uteri ac membranarum parte anteriori sublata, exhibetur Fetus cum parte Placentae et Funiculi umbilicalis.

Uteri Vasa cera impleta erant.

Pub: Nov: 15: 1774, by Dr. Hunter.

## T A B U L A XXIII.

- O**CTAVUM cadaver, sexto gestationis mense. Uteri ac membranarum parte anteriori fublata, exhibetur foetus cum parte placentæ et funiculi umbilicalis. Uteri vasa cera impleta fuerant.
- A** Vesica urinaria, respectu habito ad uterum, in situ suo naturali; modice distenditur, et ramis quibusdam majoribus venarum hypogastricarum circumtegitur.
  - B** Vaginae partis posticæ facies interna.
  - CC** Vasa hypogastrica ad cervicem uteri decurrentia et ramos ad vesicam urinariam et vaginam transmittentia.
  - DD** Vasa spermatica, duplicationem ligamenti lati intrantia.
  - EE** Tubæ.
  - FF** Fimbriæ.
  - GG** Ligamentum latile lamella posterior: anterior cultro anatomico sublata fuerat, ut vasa spermatica, ad fundum uteri ascendentia, oculo plenius occurserent.
  - HH** Ligamenta rotunda. In finistro, arteria præcipua, convoluta, a spermatica descendens conspicitur.
  - III** Uteri subfiantæ totius et membranarum scđio, qua uteri et secundarum paries anterior, ad eorum contenta exhibenda; sublatus fuerat.
  - K** Funis umbilicalis, prope locum ubi in placenta definit.
- Placenta uteri parti posticæ, versus fundum, adhæret. Funis umbilicalis, primo deorsum, super humerum finistrum, deinde sursum, pone corpus infantis, ad finem suum in placenta transfixus.

## P L A T E XXIII.

*FROM the eighth subject, at six months. A fore-view of the womb, which was injected; the anterior part, both of the womb and of the membranes, having been cut away, and the liquor amnii taken out to shew the foetus, with a part of the placenta and of the navel-string.*

- A** The bladder, in its situation with respect to the womb. It is moderately distended, and is covered with some large branches of the hypogastric veins.
  - B** The inside of the posterior part of the vagina.
  - CC** The hypogastric vessels, going into the neck of the womb, and sending branches to the bladder and vagina.
  - DD** The spermatic vessels, going into the duplication of the broad ligament.
  - EE** The tubes.
  - FF** The fimbriae.
  - GG** The posterior lamella of the broad ligament: the anterior had been removed by dissection, to give a clearer view of the spermatic vessels, in their ascent to the fundus of the womb.
  - HH** The round ligaments. In the left is seen a large convoluted artery, coming down from the spermatic.
  - III** The section of the whole substance of the womb, and of the membranes, by which the forepart of the womb and of the secundines was removed, to expose their contents.
  - K** The navel-string, near its termination in the placenta.
- The placenta adhered to the posterior part of the womb, towards the fundus. The navel-string passed first downwards, over the left shoulder, and then upwards, behind the body of the child, to its termination at the placenta.

## T A B U L A XXIV.

A<sup>B</sup> eodem cadavere.

### F I G. I.

Placenta uteri fundo et parti posticæ adhaerescens; substantia ejus spongiosa, injecta per vasa uterina cera, turgescit.

Pleraque partes lineis adumbratae, in tabula praecedenti ad plenum fuit expoſita.

- A* Vefica urinaria.
- B* Vagina.
- C C* Vasa hypogastrica.
- D D* Vasa spermatica.
- E E* Tube.
- F F* Fimbrie.
- G G* Ligamenta lata.
- H H* Ligamenta rotunda.
- III* Uteri et membranarum ſectio.
- K* Funis umbilicalis.
- L L* Placenta utero adhaerescens.

Nulla pars ceræ, in vasa uterina injectæ, ad ramos vaforum illorum quæ funem umbilicalem conficiunt, tranſierat; vafa illa fanguinem folūmmodo continentia, obſcure deſignata erant, ubi ex fine umbilicali in faciem internam placente fe immittebant. Cellulae autem in placente parte ſpongiosa, omnes eodem modo cera, vel coerulea in venas uteri injecta, vel rubra in arterias infusa, turgescabant. Hanc rem indicat figura ſecunda.

- M* Membranas ex margine placente execute, et uterum undique invenientes.

Placentæ margo hic paulo elatior eft, et magis confpicuus, ſubſtantia ejus ſpongiosa cera diſtensa.

### F I G. II.

Portio aliqua placente tranſverſe ſecta, ut ſubſtantia ejus ſpongiosa apparet, ejusdemque cera adimplete cratitudo.

- A* Placente ſuperficies interna.
  - B* Placente ſuperficies externa.
  - C* Membranarum portiuncula, ex margine placente, cera injecta turgescens, et in figuram rotundiorem adauitæ, exiens.
- Cera coeruleæ, primum per venas uteri injectæ, maxima pars ad ſuperficiem ejus internam propulſa fuerat; ceraque rubra, poſtea per arterias injecta, in partibus exterioribus reflabat; per totam autem ejus ſubſtantiam, colores hi duo plus minusve commixti fuſt.

### F I G. III.

Arterias exhibet illius partis membranæ deciduae, quæ parietem uteri anteriorem inveniuerat.

### F I G. IV.

Vene ejusdem partis deciduae.

Figure haꝝ duæ ſeparatim, aliqua ne fieret confuſio, delineatae fuſt.

## P L A T E XXIV.

FROM the ſame ſubjeſt.

### F I G. I.

The placenta, adhering to the fundus and back-part of the womb: its ſpongy ſubſtantia is filled by the injection of the uterine veſſels.

Moſt of the parts in out-lines were more fully repreſented and explained in the preceding plate.

- A* The urinary bladder.
- B* The vagina.
- C C* The hypogaſtric veſſels.
- D D* The ſpermatic veſſels.
- E E* The tubes.
- F F* The fimbrie.
- G G* The broad ligaments.
- H H* The round ligaments.
- III* The ſection of the womb and membranes.
- K* The navel-string.
- L L* The placenta, adhering to the womb.

None of the wax, injected into the veſſels of the womb, had paſſed into the branches of thoſe veſſels which compoſe the navel-string; and as they contained only ſome blood, they were not diſtinctly marked, where they spread, from the navel-string, over the internal ſurface of the placenta. But the cells, or interſifices in the ſpongy part of the placenta, were universally loaded with wax; either the blue, which was injected into the veſſels of the womb, or the red, which was thrown into the arteries. This is illuſtrated by Fig. II.

- M* The membranes, coming out from the edge of the placenta, and invenientes the womb all around.

The edge of the placenta, in this caſe, was much more elevated and diſtinct, its ſpongy ſubſtantia being diſtended.

### F I G. II.

A ſection of half of the placenta, principally to ſhew what thickness it had acquired, by its ſpongy cavities being filled with wax.

- A* Its internal surface.
  - B* Its external surface.
  - C* A small portion of the membranes, going off from the edge of the placenta, which was thickened, and rounded, by the injected wax.
- Moſt of the blue wax, which was first injected by the veſſels of the womb, was driven on towards the internal ſurface; and the red wax, which was afterwards injected by the arteries, was lodged principally in the outer parts; but the two colours were, more or leſs, blended through the whole.

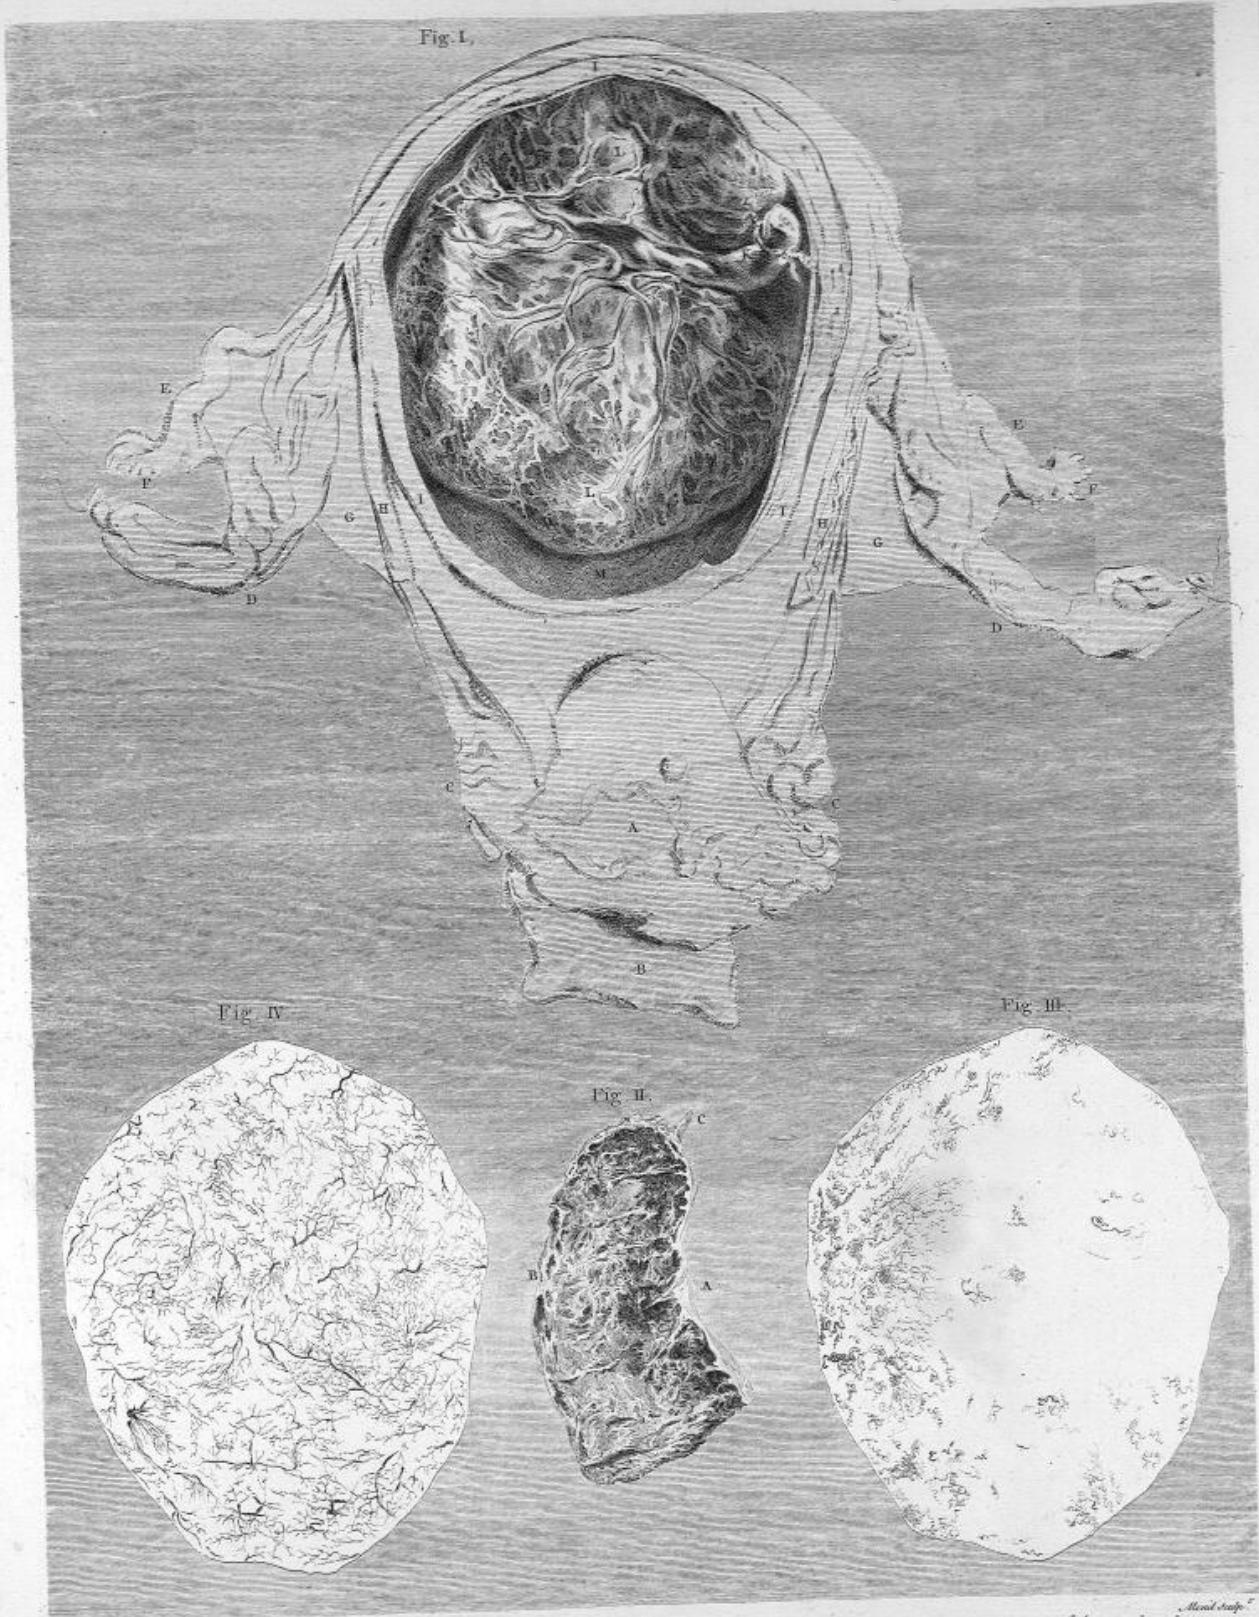

### F I G. III.

The decidua, from the fore-part of the ſame womb, with the convoluted uterine veſſels, which are diſperſed through it.

### F I G. IV.

The ſame part of the decidua, with the uterine veſſels, which ramify through it.

These two figures were drawn ſeparately, to avoid confuſion.

*J. K. Ryerson delin.* TAB. XXIV. Ab eodem Cadavere. Fig. I. Placenta Fundo et postice Uteri parti adhaesens, Substantia ejus spongiosa injecta per vasa uterina cori turpescit. Fig. II. Portio aliqua Placentae transversim secta, ut substantia ejus spongiosa apparet, ejusdemque cori adimplente crassitatis. Fig. III. Sistit. Arterias. Fig. IV. Venas illius partis membranae Dixit, qua parietem Uteri anteriorem investivit.

TAB. XXXV. Nonum cadaver, quinto mense. Apertus omnino Uterus, ac Fetus inde exemptus, quo subtilius  
judicium feratur de Fetu ipso; de partibus ejus secum inviacem comparatis et dimensis; nec non de conditione  
Cervicis Uterinae quo sub hoc tempore obtinet.

## T A B U L A XXV.

**N**ONUM cadaver, quinto mense. Apertus omnino uterus, ac foetus inde exemptus; quo subtilius judicium feratur de foetu ipso, de partibus ejus secum invicem comparatis et dimensionis, nec non de conditione cervicis uterinæ quæ sub hoc tempore obtinet.

Foetus ipse, funisque umbilicalis illustratione non eagent.

**A A A** Vulnus per membranas factum, quo foetus eximiretur; unde internas faciei placenter pars, circa finem funis umbilicalis, cernitur.

**B B B** Amnion et chorion collapta, et decidua reflexa (quæ nondum ceperat deciduae ipsi adhaerescere) externe cooperata.

**C C** Tubæ.

**D D** Ligamenta lata.

Literas sequentes alteri figuræ separatis insculptas invenies.

**E** Decidua, omnem illam partem uteri, quam placenta non occupaverat, investiens.

**F F F F** Substantia cervicis uteri, ab altero latere ad alterum facta.

**G** Pars superior, angustior, et levior introitus cervicis uteri, ubi decidua manifeste continuata fuit in membranam ejus internam.

**H** Pars inferior, latior, et rugosa, ejusdem.

**I** Facies interna posterioris labii oris uterini, vesiculis, glutine repletis, bullata.

**K** Facies interna vicinæ partis vaginalis.

**L L** Portiunculae haæ duas membranarum fluitantium, exhibent, imperfectè quidem, partes duas cuticule vaginalis investientis, quæ in cadavere, de quo agitur, distinctè admodum, separabatur usque ad ipsam oris uteri prominentiam.

## P L A T E XXV.

**F R O M** the ninth subject, in the fifth month. The womb fully opened, and the fetus taken out; to shew the exact dimensions and proportions of the child, and the state of the cervix uteri at this period of utero-gestation.

The child and its Navel-string require no explanation.

**A A A** The opening made in the membranes for the extraction of the child, through which is seen the inside of the placenta around the termination of the navel-string.

**B B B** The collapsed amnion and chorion, covered externally with the decidua reflexa, which had not as yet contracted an adhesion to the decidua.

**C C** The tubes.

**D D** The broad ligaments.

The following letters are engraved on a separate figure in out-lines.

**E** The decidua, lining that part of the womb where the placenta did not adhere to it.

**F F F F** The section, from side to side, of the substance of the cervix uteri.

**G** The upper, narrower, and smaller part of the passage in the cervix uteri, where the decidua was evidently continued down into the inner membrane of that passage.

**H** The lower, wider, and rugous part of that passage.

**I** The inside of the posterior lip of the os uteri, studded with small bags of gelly.

**K** The inside of the adjacent part of the vagina.

**L L** The two small pieces of floating membranes, represent, though very imperfectly, two portions of the cuticular lining of the vagina; which, in this subject, was separated distinctly and evidently as far up as the projection of the os uteri.

## T A B U L A XXVI.

D E C I M U M cadaver, quinto graviditatis mense. Exhibetur flatus uteri retroverfi.

### F I G. I.

Apertum cruciali incisione abdomen, contractiori autem forma exhibitum, cum vesica urinaria præter morem distensa.

- A Incisio longitudinalis a scrobiculo cordis incipiens:
- B Quia ad montem venoris delineantem.
- C Partium continentum anguli superiores, super hypochondria reflexi.
- D Anguli inferiores utriusque, supra spinam ossis ilium reflexi.
- E Vesica urinaria, ita urina sanguinolenta distensa, ut fundus ejus ad di-midium spatii, umbilicum inter et scrobiculum cordis, porrigeretur.

### F I G. II.

Vesica urinaria, forma pariter minutori, per medium divisa, et ad imam partem aperta, ut situs oris uterini, hic præter natum fursum spectanis, appearat.

- A Pars dimidia vesice super spinam ossis ilium utrinque reflexa.
- B Incisionis, a vertice ductus, qua vesica urinæ aperta fuit, finis anterior.
- C Unus recti intestini circuitus, qui in conspectum prodit ad ejusdem finem posteriorem.
- Duas inter has literas B, C, vesica pars ina tumore, qui universum pelvis occupavit, elevata fuit: hic quoque, facta cruciali incisione parva, inter et paulo ante fines ureterum, os uteri in conspectum venit, pone sum, ut in hac figura, et paulo elevatus quam pars superior symphyseos ossium pubis.

### F I G. III.

Contenta pelvis omnia a parte postica; inter quæ, uterus retroversus maximum locum habet.

- A Rectum, ubi in cavum pelvis transibat, deligatum.
- B Margines postiores sectionis vesice a vertice ductus.
- C Rectum, uterum inter et ossa, sacrum et coccygis, compressum.
- D Peritoneum, quod, ad finitimum recti intestini latus, pelvum investivit, ope catheteris, hanc partem inter et uterum immisit, elevatum.
- E Pars peritonei, parti modo deferupta respondens, ad dextrum recti intestini latus, percussa, et margo ejus F sepositus.
- G Uteri facies anterior, retrofusa versa.
- H Tuba ascendens ab uteri fundo, qui scilicet ad partem pelvis infimam devoluta fuerat.
- I Ovarium ante tubam positum.

### F I G. IV.

Uteri portione, ac deciduae parte sublatis, fetus per pellucidas membranas, chorion nempe et amnion, conficitur.

- A Os uteri surius verum. Circum undique conspicuntur partium vaginalis contingutum interiora.
- B Uteri substantia divisa.
- C Facies externa partis alicuius deciduae. Membrana hoc densa, opaca, et arteriis parvis, injecia ab utero cera impletis, abundavit.
- D Facies interna alijs partis membranæ ejusdem. Qua parte ablata fuerat decidua, per chorion pellucidum et amnion conficitur fetus, cuius caput dependet, et collum fuso umbilicali circum-cingitur.
- Lineæ albæ super chorio leviter adumbratae, valorum tenuum, que inde in deciduam transeunt, reliquias representant.
- Cum hac tabula delineabatur, liquor amnius langleme exudante infectus fuerat. Membranarum autem pellucidarum facies convexa figuram fatis dilinem, forma quidem contractam, fenestræ, lucem admittentis, dedit.
- Tubarum et ovariorum figuram huicce tabule inferre supervacaneum duxi.

## P L A T E XXVI.

FROM the tenth subject, in the fifth month, shewing the circumstances of a retroverted womb.

### F I G. I.

Show, in miniature, the abdomen fully opened by a crucial incision, and the bladder enormously distended.

- A The beginning of the longitudinal incision at the pit of the stomach.
- B Its termination in the mons veneris.
- C The upper angles of the containing parts, turned over the hypochondria.
- D The lower angles; each turned over the spine of the os ilium.
- E The bladder, so distended with bloody urine, that its fundus reached half way between the navel and the pit of the stomach.

### F I G. II.

Drawn in miniature to the same scale, shews the bladder cut down through its middle, and opened, at its lower part, to shew the situation of the os uteri.

- A A Half of the bladder, on each side, turned over the spine of the os ilium.
  - B The anterior extremity of the vertical incision by which the bladder was opened.
  - C One turn of the rectum which was seen at the posterior end of the same incision.
- Between these two letters, B, C, the depending part of the bladder was raised up by a tumor which possessed the whole cavity of the pelvis; and here, a small crucial incision having been made, between, and a little before the ends of the ureters, the os uteri was seen, as in this figure, situated behind, and a little higher than the upper part of the symphysis of the ossa pubis.

### F I G. III.

A back-view of the whole contents of the pelvis, consisting principally of the retroverted womb.

- A The rectum tied, where it passed down into the cavity of the pelvis.
- B B B The posterior edges of the vertical section of the bladder.
- C C The rectum, where it was pressed and flattened, between the womb and the sacrum and os coccygis.
- D D The peritoneum, which lined the pelvis on the left side of the rectum, raised up by a large catheter, introduced between it and the womb.
- E E F The corresponding part of the peritoneum on the right side of the rectum, cut down, and the edge F turned off.
- G The anterior surface of the womb, turned backwards.
- H The tube, coming up from the fundus uteri, which was turned down, into the lowest part of the cavity of the pelvis.
- I The ovary, placed before the tube.

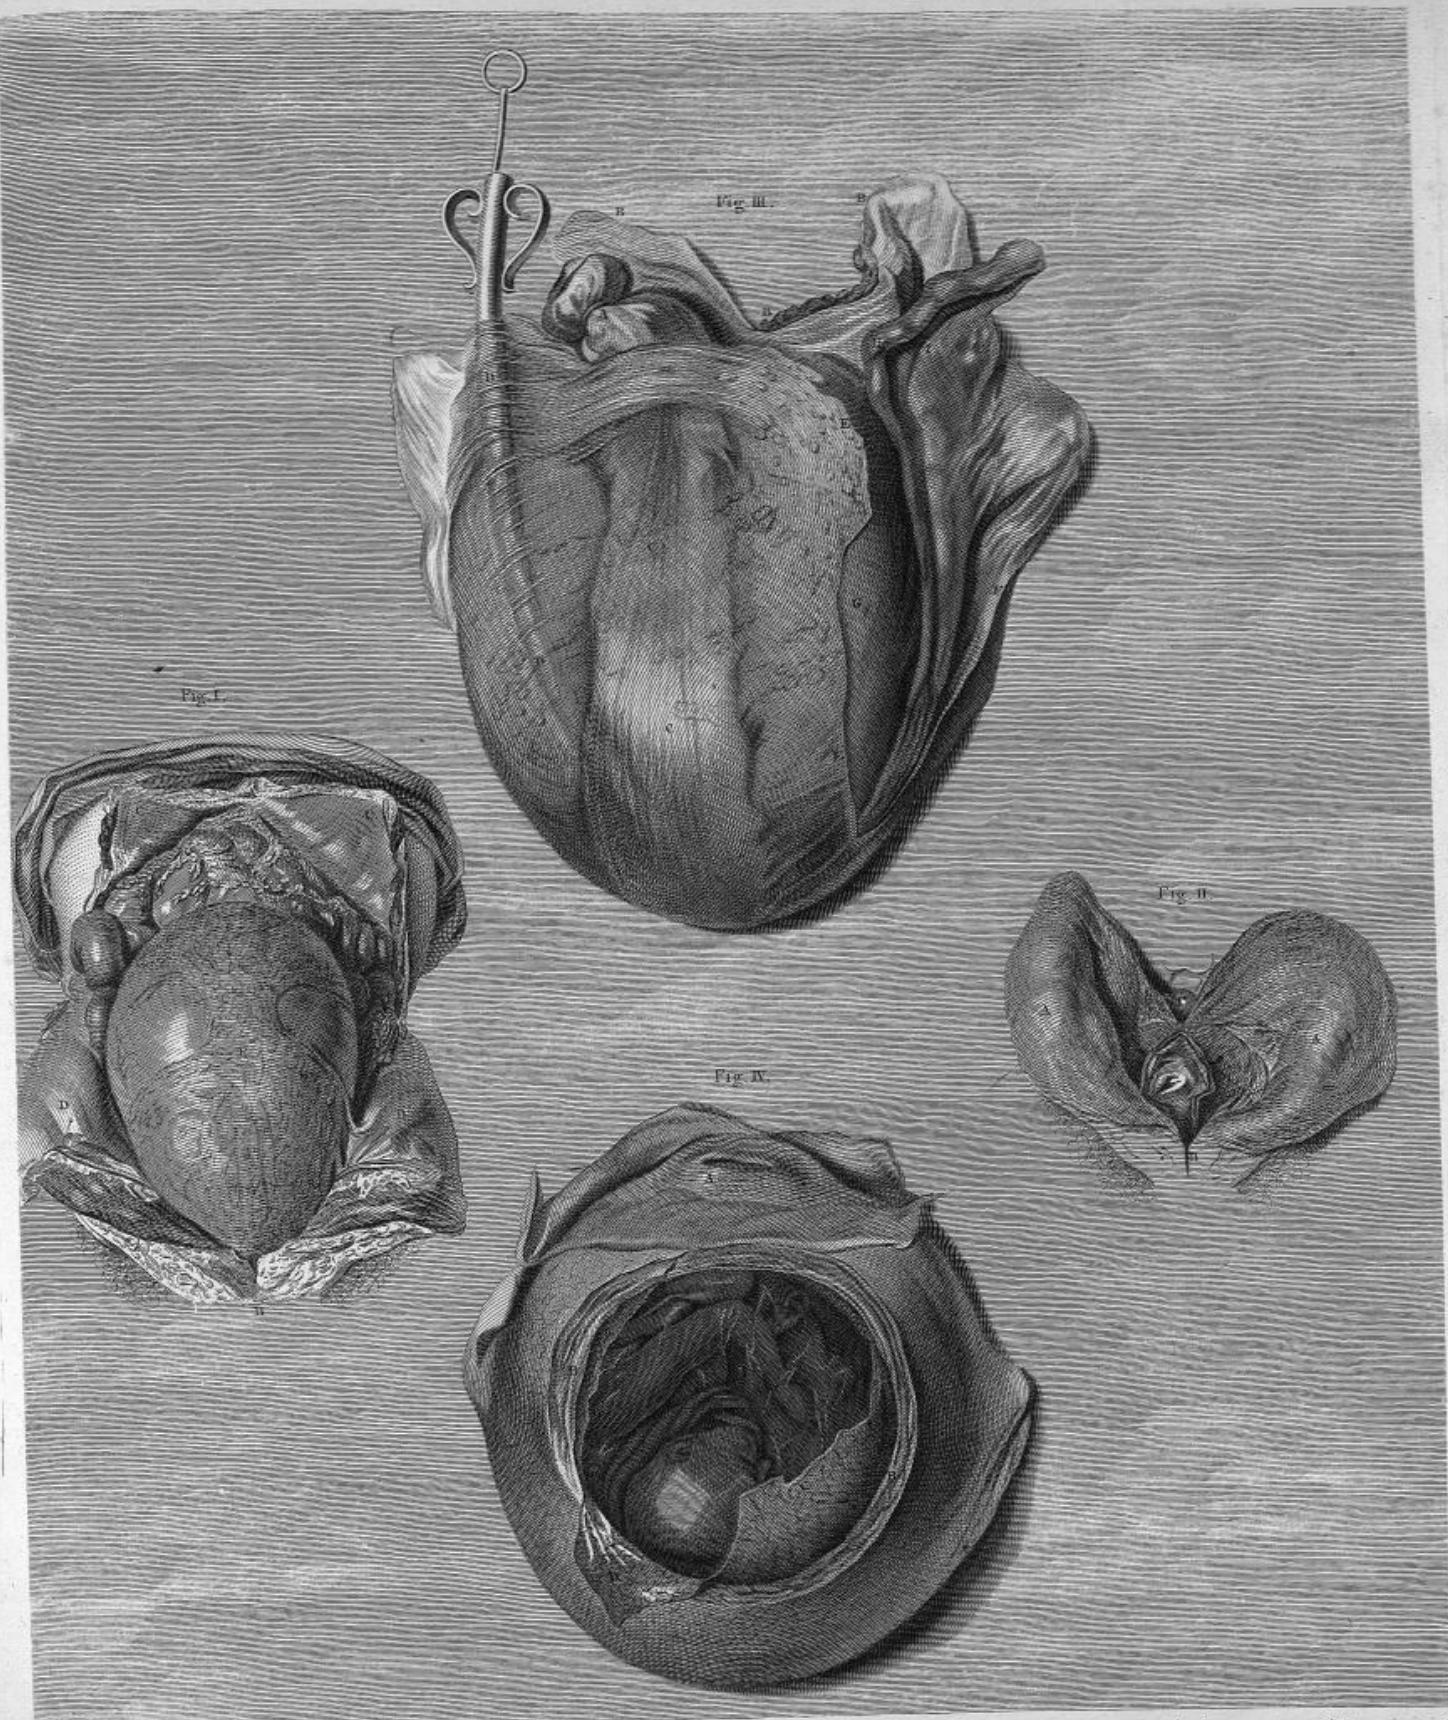

### F I G. IV.

The womb opened, to shew the secundines and their contents.

- A The os uteri, turned upwards. All around it, is seen the inside of the adjacent parts of the vagina.
  - B B The substance of the womb, cut through.
  - C The external surface of part of the decidua. This membrane was thick and opaque, and full of small arteries, which were injected from the womb.
  - D The internal surface of another part of the same membrane. Where the decidua was removed, through the transparent chorion, and amnion, is seen the fetus, with its head depending, and the funis round its neck.
- The white, loose lines on the chorion are the remains of the filamentous vessels, which pass from it into the decidua.

The liquor amnius was become bloody, by transfusion, when this figure was drawn; and the convex surface of the transparent membranes, reflected a distinct miniature picture, of the window which gave light.

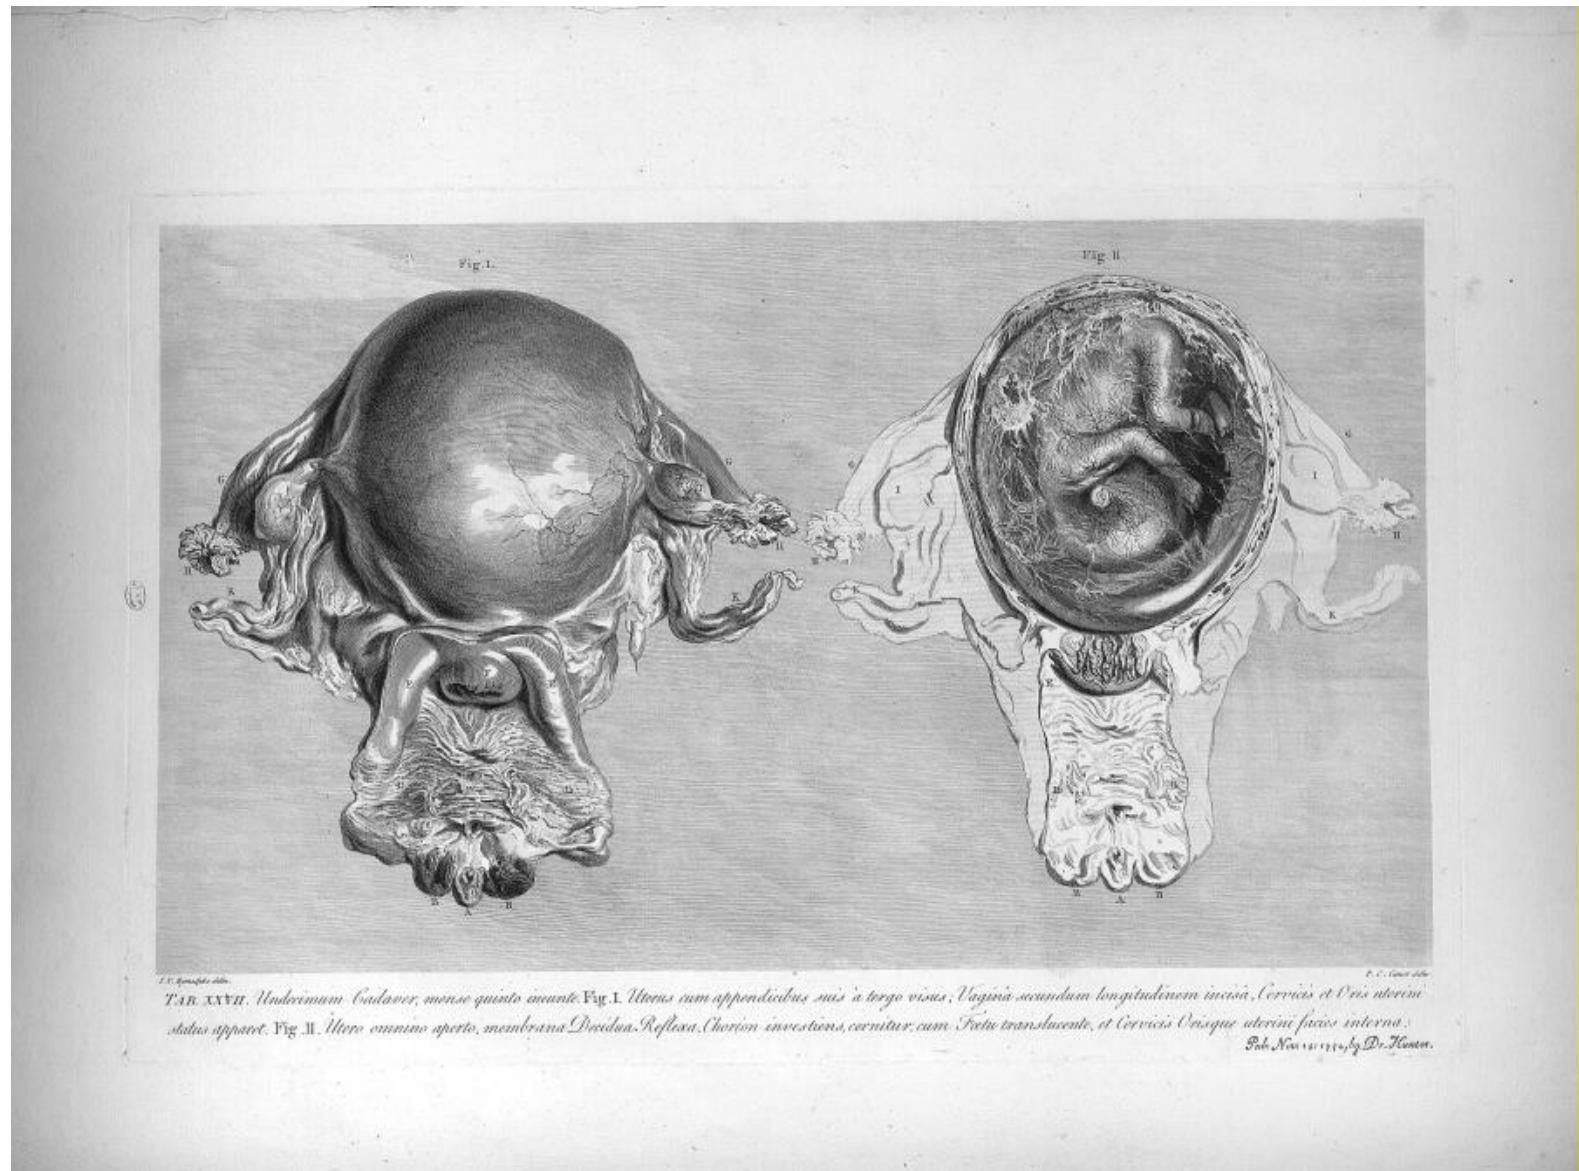

It was thought unnecessary to introduce the tubes and ovaria.

TAB. XXVI. Decimum cadaver, quinto graviditatis mense. Exhibetur status Uteri retroversi. Fig. I. Apertum decidua incisio. Abdomen, sed contractiori formâ exhibendum, cum Utriculi Utrinaria præter morem distentâ. Fig. II. Vesica Utrinaria formâ pariter minutiore, per medium divisa et ad imam spissitatem contracta, ut situs Ovis Uterini hic præter naturam sursum spiculans appearat. Fig. III. Contenta Pelvis omnia à parte posticiâ. Fig. IV. Uteri pertonae pars aperta, ut situs Ovis Uterini hic præter naturam sursum spiculans appearat. Fig. V. Uteri pars subtilis, factus per pellucidas membranas, Chorion nempe et Amnion, conspicitur.

J. C. Gynæcologi delineavit.

Ammon sculpsit.

J.V. Remeijer delin.  
P.C. Conci delin.  
TAB. XXVII. Undecimum Cadaver, mense quinto invenit. Fig. I. Uterus cum appendicibus suis à tergo visus, Vagina secundum longitudinem incisa, Cervix et Ovis uterini  
status apparet. Fig. II. Uterus omnino aperto, membrana Decidua. Reflexa. Chorion investitum, cornutum, cum Filiu translucente, et Cervicis Ovisque uterini facies interna.  
Pub. Nov 1711. by Dr. Homann.

## T A B U L A XXVII.

UNDECIMUM cadaver, mense quinto ineunte. Duae figurae. Arteriae et venae cera diversi coloris impletæ sunt.

### F I G. I.

- Uterus a tergo visus, una cum vagina eo confilio incisa, ut stans cervicis orifice uteri oculo objiciretur.
- A Clitoris.
  - BB Nymphæ.
  - C Proxime hanc supra literam, orificium urethræ conspicitur.
  - DD Vagina pars extrema inferior, rugis aspera.
  - EE Ejusdem pars extrema superior, altera laevior, præcipue a parte postica.
  - F Uteri orificium, in terminum vaginæ superiorem se projiciens.
  - GG Tube.
  - HH Fimbriæ.
  - II Ovaria.
  - KK Vaorum spermaticorum fasciculus, per ligamenta lata, ad ovaria, tubas, et fundum uteri ascendentium.

### F I G. II.

- Utero omnino aperto, membrana decidua reflexa, chorio super extensa (per quas membranas fetus videtas) et cervicis orifice uterini facies interna apparent.
- A, BB, C, DD, EE, F, GG, H, II, KK, vide fig. I.
  - L Cervicis uteri facies interna rugosa, per glutem pellucidum cernitur.
  - MM Substantia tam uteri quam decidua percifita.
  - NN Decidua reflexa, membranas pellucidas investiens, alba, opaca, striata, differt a deo tenuata, ut in locis plurimis fere pellucida videretur: decidua, quæ hanc obtegebant, adhærefere non dum caperat.
  - O Arteria convoluta, per deciduam reflexam, a margine placenta excurrentes.
  - P Vena huic similis.
  - Vafa fetus sub cute repentina, fanguine adeo distincta adimplita sunt, ut profecto vaorum cadaveris, cera injecta turgentium, imaginem praæferrent.
  - Tunis umbilicalis pars altera fetus collum ambibat, talum fistulum altera.

## P L A T E XXVII.

*TWO figures from the eleventh subject, in the beginning of the fifth month. The arteries and veins were injected with wax of different colours.*

### F I G. I.

*A back-view of the womb, with the vagina slit up to shew the state of the cervix and os uteri.*

- A The clitoris.
- BB The nymphæ.
- C Immediately over this letter is the orifice of the urethra.
- DD The lower end of the vagina, which is rugous.
- EE The upper end, which is more smooth, especially behind.
- F The orifice of the womb, projecting into the upper end of the vagina.
- GG The tubes.
- HH The fimbriæ.
- II The ovaries.
- KK The bundle of spermatic vessels, passing up, in the broad ligaments, to the ovaries, tubes, and fundus of the womb.

### F I G. II.

*The same womb fully opened, shewing the decidua reflexa upon the chorion, (through which the child appears,) and the inside of the neck and orifice of the womb.*

- A, BB, C, DD, EE, F, GG, HH, II, KK, see fig. I.
- L The rugous inside of the neck of the womb, seen through the transparent cement.
- MM The substance, both of the womb and of the decidua, cut through.
- NN The decidua reflexa, covering the transparent membranes, in white and opaque striæ. It was become so thin, by extention, as to be rendered almost transparent in many places. It had not as yet contracted an adhesion with the decidua which covered it.
- O A convoluted artery, branching through the decidua reflexa, from the edge of the placenta.
- P A vein of the same kind.
- The cutaneous vessels of the child were as distinctly filled with blood, as if they had been injected.
- One turn of the navel-string was round the child's neck, and another was twisted round the left ankle.

## T A B U L A XXVIII.

F I G. I.

**I**DE M uterus quem exhibet figura secunda tabula praecedentis, sed inversus (i. e. fundo decliviori); ut, contentis suo pondere a cervice fundum versus devolutis, margo placente clariss distinguitur; ac decidua, quæ ibidem ab interno uteri pariete in externam chorii superficiem reflexa, nomen decidua reflexa affumit, melius conspicatur.

Partes lineis adumbratae in tabula praecedenti modo expositæ sunt atque explanantur: scilicet *A, BB, C, DD, EE, F, GG, HH, II, et KK*, in figura prima; atque *L et MM* in figura secunda.

*NNN* Decidua crassa, faciem internam uteri, ubi placenta non adhaerescet, investiens.

*OOO* Placente margo, ubi lamina interna decidua a facie interna uteri, ad faciem membranarum externam, inflexa fuit atque continuata; quo in loco efficit

*PP* Decidua reflexam, eo magis attenuatam, quo longius a margine placente distat.

*Q* Hic patuit, deciduam non eodem modo, quo cæteræ membranæ, trans aditum in cervice uteri se porrexit; sed per paullum spatiis intra hunc aditum, more investientis membranæ, esse continuatum; tandemque sensim evanuisse, aut cum glutine illo, quod vice cæmenti fungitur, esse confusam.

F I G. II.

Ejusdem uteri facies interna, qualis apparuit, placenta jam separata.

*A, BB, C, DD, EE, F, GG, HH, II, KK*, Vide tabulæ praecedentis figuram primam.

*L, MM*, Vide ejusdem tabula figuram secundam.

*NNN* Pars decidua, undique circa placente marginem, etiamnum utero intus adhaerens.

*O* Centrum superficie orbiculata, in uteri parte anteriori, cui placenta hoc in cadavere adhaerescet. Hæc arteriæ venisque abundabat, quæ scilicet utero ac placente communes fuerant, quafquæ necessario perrupi, duas has partes dum separabam. Arteriæ quidem parvæ erant, convolute, coloriisque magis lucidi, ut ad literam *P*; venæ autem perruptæ speciem macularum fuscarum, vel foraminum, magnitudinis haud exiguae, præ se ferebant, ut ad literam *Q*.

Linea inæqualis quæ superficiem hanc sebarum, cui placenta adhaerescet, ambit, extrellum marginem placente a membranis abscessis designat; eadem etiam indicat locum quo decidua lamina interna reflexa fuerat, circum undique, in faciem chorii externam.

## P L A T E XXVIII.

F I G. I.

**T**HE womb, from the same subject, turned upside down, that the weight of its contents might carry them towards the fundus; to shew the border of the placenta, where the decidua is reflected from the inside of the womb, to the outside of the chorion, at which last place it makes the decidua reflexa.

The parts represented in out-lines were seen and explained in the preceding plate, viz. *A, BB, C, DD, EE, F, GG, HH, II, and KK*, in the first figure, and *L, MM*, in the second.

*NNN* The thick decidua, lining the inside of the womb, where the placenta was not attached.

*OOO* The edge of the placenta, where the inner layer of the decidua was continued, by inflexion, from the inside of the womb to the outside of the membranes; at which last place it constitutes

*PP* The decidua reflexa, which becomes thinner, in proportion as it is farther distant from the edge of the placenta.

*Q* Here it was evident that the decidua was not, like the other membranes, extended across the passage in the neck of the womb, but was continued a little way down that passage, and there insensibly lost, or blended with the glutinous cement.

F I G. II.

The inside of the same womb, after the placenta had been separated.

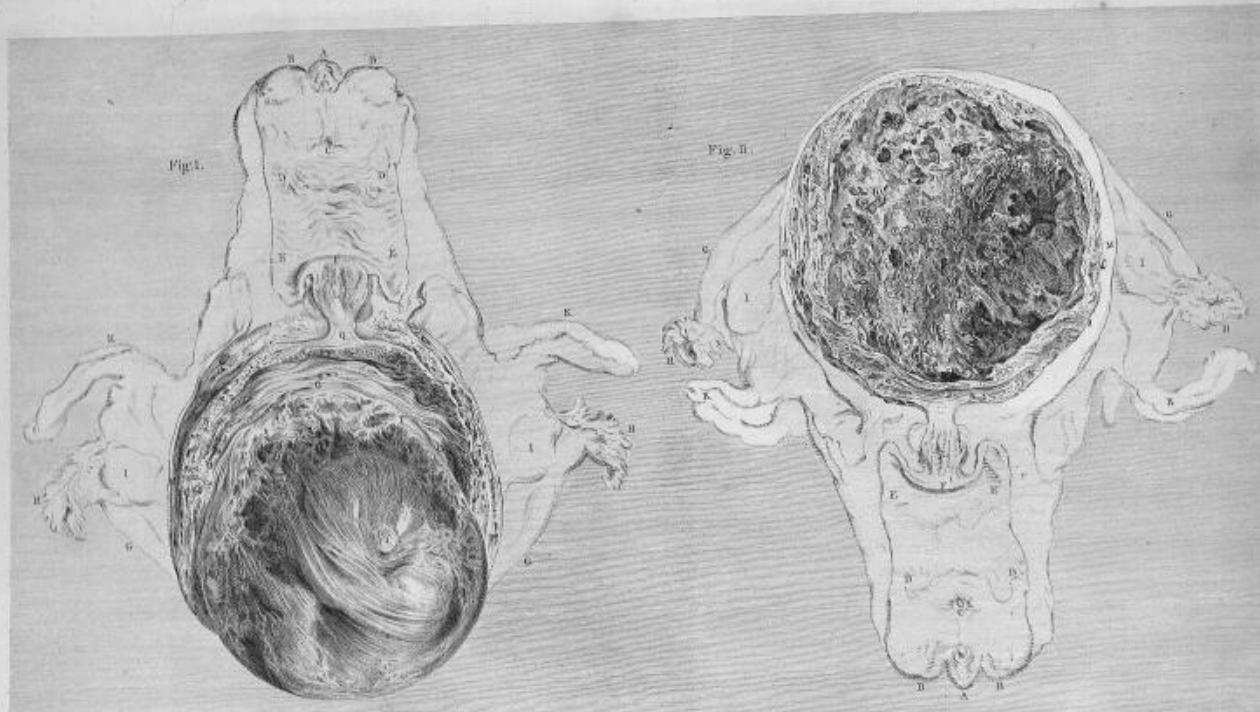

*A, BB, C, DD, EE, F, GG, HH, II, KK*, See the first figure of the preceding plate.

*L, MM*, See the second figure of the preceding plate.

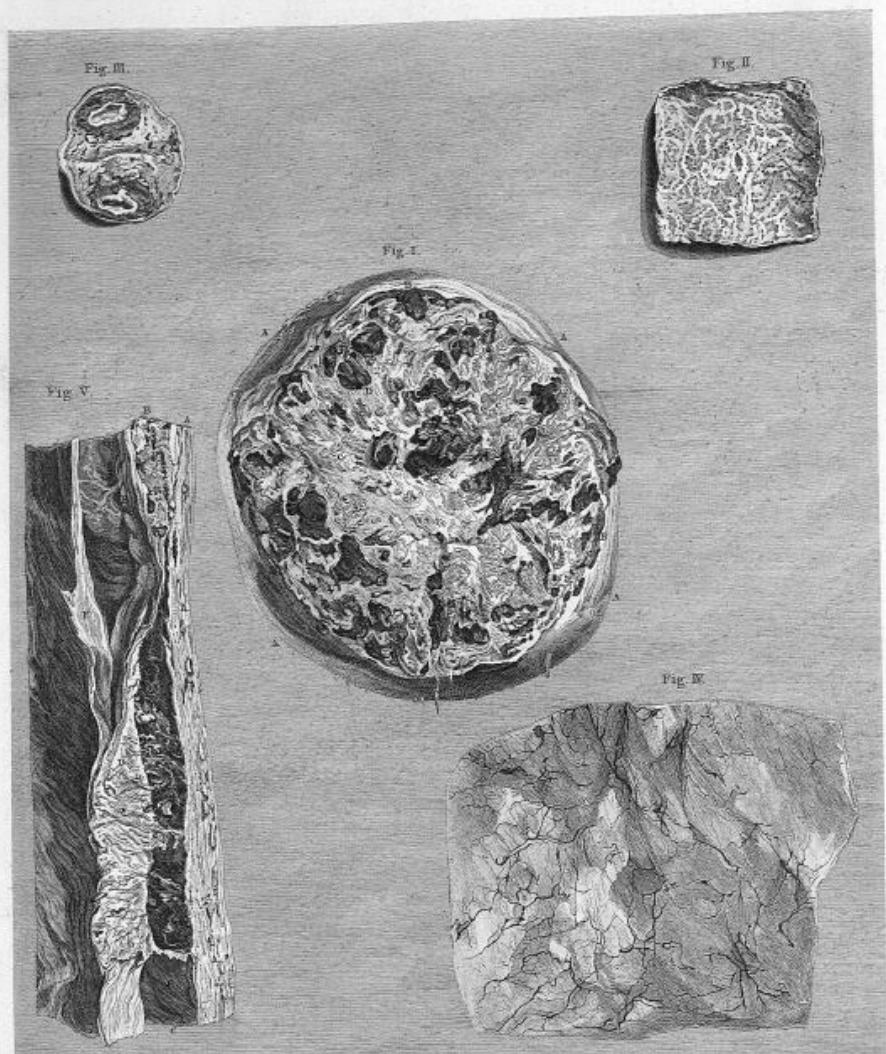

*NNN* Part of the decidua all around the edge of the placenta, left adhering to the inside of the womb.

*O* The centre of the circular surface at the forepart of the womb, to which the placenta, in this case, adhered. It was full of arteries and veins, which had passed between the womb and placenta, and which we broke through in separating these two parts: the arteries were small, and convoluted, and of a lighter colour, as at the letter *P*; the broken veins had the appearance of dark spots, or holes, of some considerable size, as at the letter *Q*.

The irregular line, which surrounds this rough surface to which the placenta adhered, points out the extreme border of the placenta, which was cut off from the membranes, and where the inner layer of the decidua, all around, was reflected upon the outer surface of the chorion.

J.V. Schreyer delin.  
TAB. XXVIII. Fig. I. Idem Uterus quem exhibet figura secunda Tabulae precedentis, sed inversus (i.e. fundo decidiori) ut contentis suo pondere a Cervice  
fundum versus devolutis, maro Placenta clavis distinguatur, ac Decidua, qua ibidem ab interno Uteri pariete in externam chorion superficiem reflexa.  
nomen Decidua Reflexa sumpit, melius conspicitur. Fig. II. Facies ejusdem uteri interna, prout annulis Placenti se exhibuit. Linea illa irregularis  
asperem et iniqualem superficiem circumserbens, extremis indicat Placenta limites, ubi Decidua ab Utero circumquaque in chorion fuerat reflexa.

*J.V. Remeignies deline.*  
TAB. XXIX. Quinque figuræ exhibet, quarum tres priores ex eodem sunt Cadavere. Fig. I. Ovum  
llero exceptum. Fig. II. Pars Ductus vitro adhuc amplificata. Fig. III. Ovarium cum Corpori luteo.  
Fig. IV. Portio membranarum nono mense. Fig. V. Pars Uteri et Placenta cum membranis.

*Z.C. Coenck sculps.*

*ANM*

## T A B U L A XXIX.

**T**RES figuræ ad idem exemplar depictæ; quibus adjiciuntur duæ aliæ, tanquam appendices.

### F I G. I.

Ovum utero exemptum, faciem placentaë externam repreäsentans, laciniasque marginem ejus undique ambientes, membranæ scilicet deciduae reflexæ dilaceratæ reliquias. Hæc figura cum figura secunda præcedentis tabulae congruit, faciem ovi exhibens, quod isti utero intus adhaerat.

**A A A** Decidua reflexa, undique a margine placentæ, ad chorion integrandum, exiens.

**B B** Limbus, marginem placentæ circum-ambiens, ortus scilicet ex sectione deciduae reflexæ, ubi illa separata fuit a decidua, aut, si ita loqui mavis, a facie uteri interna.

Circulus, limbo isto circundans, faciem extermam placentæ exhibit, quæ utero adcreverat. Has partes dum separabamus, arteriae venæque plurimæ dilaceratæ sunt, quarum pars altera utero adnexa est, altera placentæ. Arteriae quidem, ut in figura præcedenti, parvæ, convolutæ, et colore sunt lucidiori, ut ad literas *CCC*; venas autem maculæ latæ ac fuscæ representant, ut ad literam *D*.

### F I G. II.

Partis membranæ deciduae facies interna, ope vitri optici amplior visa, ut textura ejus propria, cibrum haud male referens, explicari posset.

### F I G. III.

Ovarium, corpusque luteum percisso. Corpus luteum, etiam ad hoc temporis, cavatum esse manifeste apparuit.

### F I G. IV.

Figura addita.

Pars aliqua membranæ deciduae, pertinentis ad partum legitimum, mensibus scilicet novem rite exactis.

### F I G. V.

Alia figura addita.

Portio aliqua uteri et secundarum, nono mense, ita disposita, ut carum partium strata diversa distincte conficiantur. Arteriæ cera rubra, venis flava est injecta.

**A A A** Uteri substantia discissa.

**B B** Placenta ei adhaerens, prope marginem percisso.

**C C** Decidua ea in parte utero adhaerens.

**D D** Decidua in illa parte ab uteri facie interna elevata, chorioque adhaerens.

**E** Chorion, supra faciem internam placentæ continuatum, ubi separari non potest.

**F** Amnion elevatum a chorio, cui non, nisi per gluten aliquod mollissimum, adhaerit.

## P L A T E XXIX.

**T**HREE figures from the same subject, and two supplemental.

### F I G. I.

The ovum taken out of the womb, shewing the external surface of the placentæ, and the ragged edge all round, where the decidua reflexa was torn through. This figure corresponds with the second figure in the preceding plate, shewing the surface of the ovum which was attached to the inside of that womb.

**A A A** The decidua reflexa going off, all round, from the edge of the placentæ, to cover the chorion.

**B B B** The edge, formed all round the brim or border of the placentæ, by cutting the decidua reflexa where it came off from the decidua, or, in other words, from the inside of the womb.

The round surface, enclosed by that edge, is the outer surface of the placentæ, which had adhered to the womb. In separating those two parts, many arteries and veins were torn through, one part of each remaining with the womb, and the other with the placentæ. The arteriæ, as in the preceding figure, are small, convoluted, and of a lighter colour, as at the letters *CCC*; the veins make broad dark spots, as at the letter *D*.

### F I G. II.

The internal surface of a portion of the decidua, considerably magnified, to shew its peculiar cribiforme or lace-like appearance.

### F I G. III.

The ovarium and corpus luteum cut through; the latter of these, even at this time, had an apparent cavity.

### F I G. IV.

A supplemental figure.

A portion of the decidua, from a common delivery at nine months; its vessels filled with red blood.

### F I G. V.

Another supplemental figure.

Part of the womb and secundines, at nine months, so disposed as to exhibit distinctly the different strata of those parts. The arteriæ had been injected with red wax; the veins with yellow.

**A A A** The substance of the womb cut through.

**B B** The adhering placenta cut through, near its edge.

**C C** The decidua, at that part left adhering to the inside of the womb.

**D D** The decidua, at this part raised from the inside of the womb, and adhering to the chorion.

**E** The chorion, which is continued upwards over the inside of the placentæ, where it cannot be separated.

**F** The amnion, raised up from the chorion, to which it adhered by a tender gelly only.

## T A B U L A    XXX.

**A** Duodecimo cadavere, quarto mense recurrente. Uterus a parte antica apertus, vasis cera repletis. Præcipue hic notanda occurunt, superficies placentæ externa; vasa ex utero se immersentia in placentam; cervix uteri externa, qualis facies, sit, et, respectu ad vesicam urinariam urethramque habito, quem situm obtineat.

Placentæ superficies, sectione uteri substantiae circumdata, adeo refert precedentem, scilicet fig. I. ut explanatione minime indigat.

**AA** Vasa spermatica.

**BB** Fimbriae, vise tubarum partes extremae.

**CC** Ovaria. Horum finistrum corpore luteo nonnihil auctum fuit.

**DD** Ligamenta rotunda.

**E** Cervix uteri contracta.

**F** Facies interna portionis istius vesicæ, quæ vagina subiecta adharet. Uroque in latere, et hac litera paulo superius, cernitur orificium urethrae.

**G** Urethra univerfa omnino aperta.

## P L A T E    XXX.

**F**ROM the twelfth subject, in the fourth month, shews the injected womb, opened on its fore part, to give a full view of the external surface of the placenta, with the vessels passing into it from the womb. It shews likewise the state of the cervix uteri externally, and its relation to the bladder and urethra.

The surface of the placenta, surrounded by the section of the substance of the womb, is so much like that of the first figure in the preceding plate, that it requires no explanation.

**AA** The spermatic vessels.

**BB** The fimbriae, or ends of the tubes.

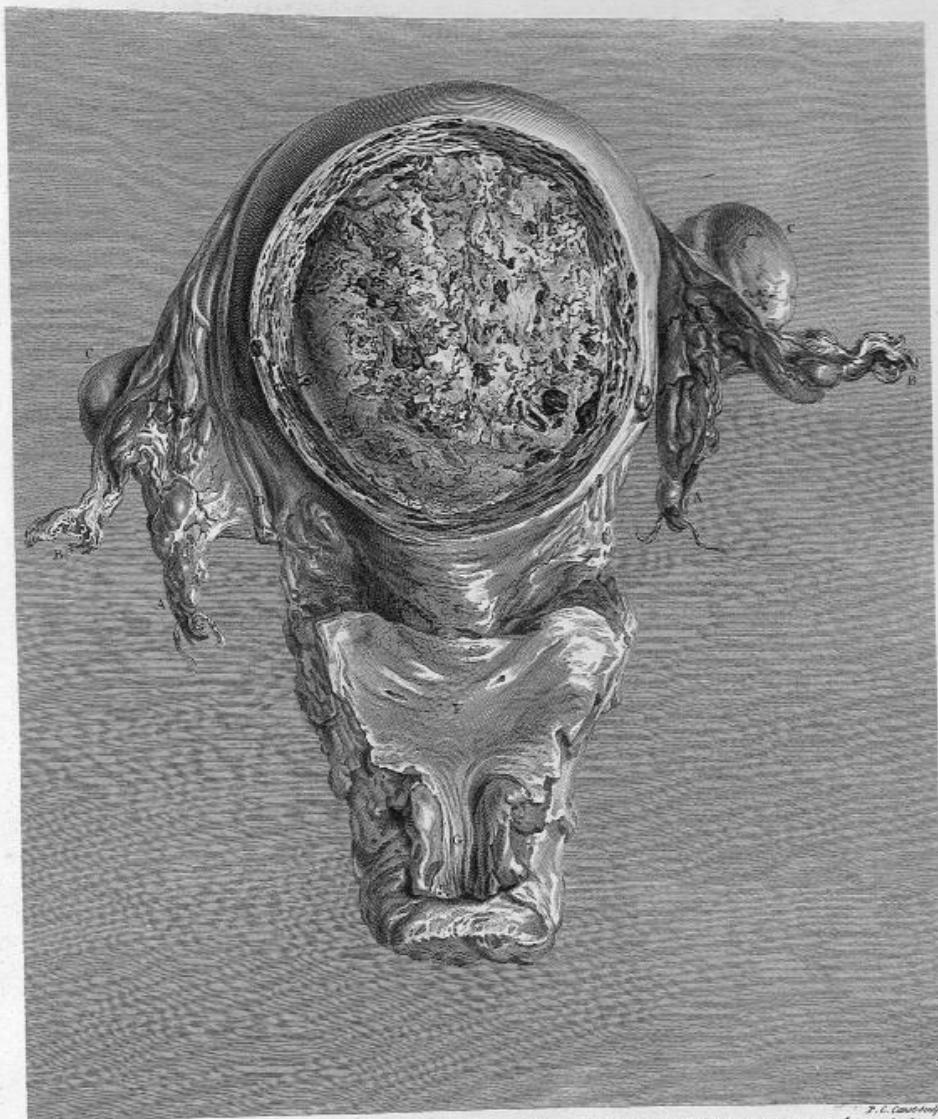

**CC** The ovaria. The left was enlarged by the corpus luteum.

**DD** The round ligaments.

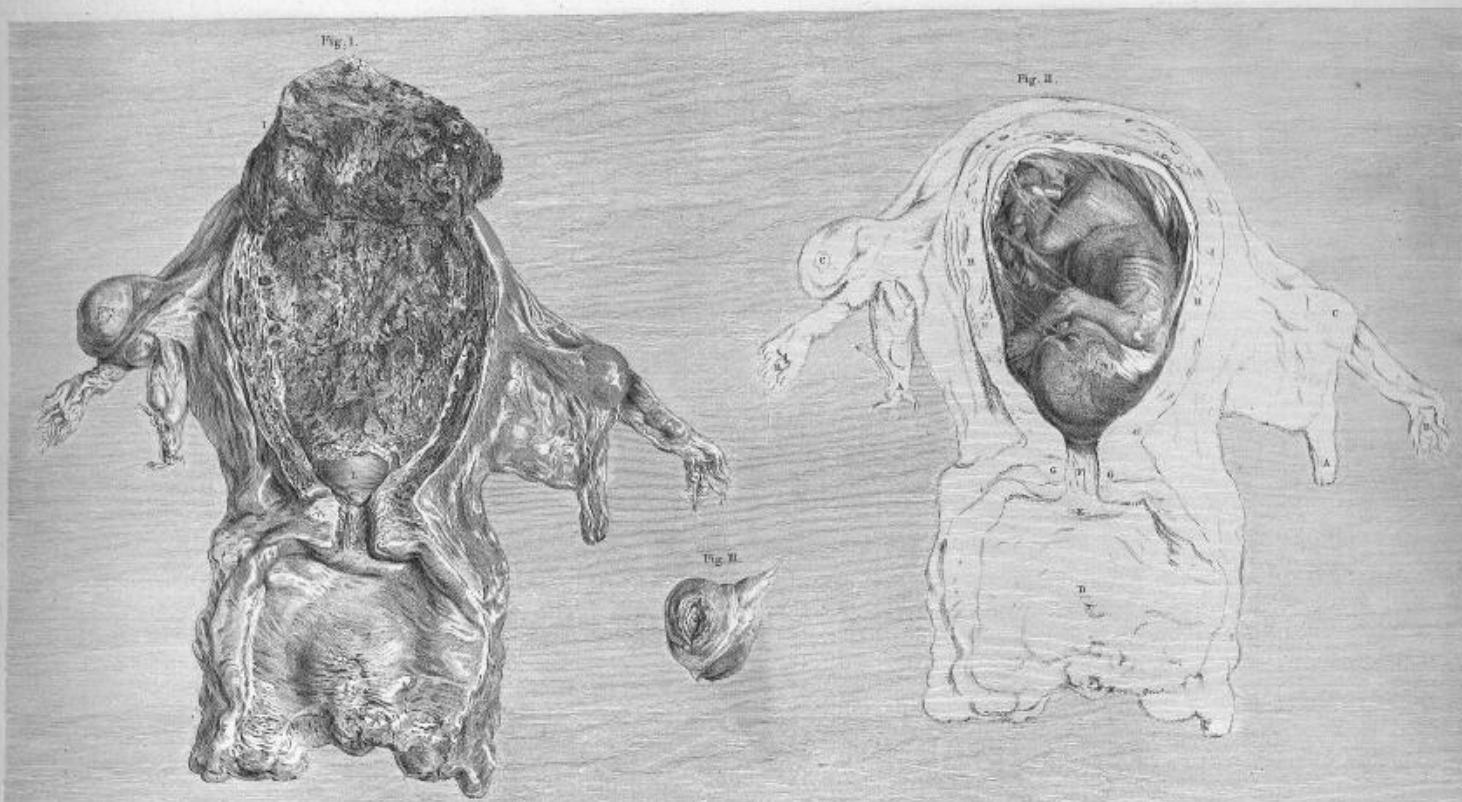

**E** The cervix uteri, in a contracted state.

**F** The infide of that portion of the bladder which adheres to the subjacent vagina. On each side, and a little higher than this letter, is seen the orifice of the ureter.

**G** The urethra opened in its whole length.

I. V. Rennaldi deo  
TAB. XXX. A duodecimo Cadavere, quarto mense decurrente. Uterus a parte antica apertus, vasis cera repletus.  
Principue hic notanda occurunt, Superficies Placentae externa; Vasa in Placentam ex Utero se immixcentia;  
Cornu uteri externa Facies, qualis sit, et respectu ad Uricas Urinarias Urethramque habitu, quem etiam obtineat.

TAB. XXXI. Tris figure ab eodem Cadavere. Fig. I. Uterus a parte postica ita apertus, ut Facies Membranae Deciduae externa, ac status Cervinis uterinae vissi exponantur.  
 Fig. II. Parte posteriori Uteri, membranarumque Deciduae subtali. Fetus ipse per pellucidas membranas apparet. Fig. III. Ovarium apertum Corporis Lutei cavum ostendit.

## T A B U L A XXXI.

T R E S figurae ab eodem cadavere.

### F I G. I.

Uterus a parte postica ita apertus, ut facies membranæ deciduae externæ, ac status cervicis uterinae visu exponantur.

Literas tabule huic explanande accommodatas omnes præter II, K et L, in figura secunda videas.

AA Vasa spermatica.

BB Fimbriae.

CC Ovaria.

D Vagina universa, quaqua in longum extenditur, omnino aperta.

E Os uteri in vaginam se protendens.

F Via rugosa, per cervicem uteri ducens, unde gluten illud consolidans jam exciderat.

GG Sectio substantiae cervicis uteri.

HH Sectio substantiae uteri, unde

II Pars posterior totius substantiae uteri de decidua sublata et in fundum uteri revoluta cernitur.

K Decidua, adhuc membranis adhaerens, superficiem suam scabram externam exhibens, unde uterus fuerat separatus. Membrana haec vasis, cera impletis, venis maxima de parte, abundavit. Plurimis autem in locis, cera, vasis effusa, haec visu indistincta reddiderunt.

L Membranæ pellucidae, amnion scilicet et chorion, decidua reflexa tenuissima et pellucida obtecta, in aditum cervicis uteri, ubi decidua ipsa deficit, viam sibi facientes.

### F I G. II.

Idem uterus; postquam scilicet inversa pars uteri fuerat abscessiva, et decidua ablata, ea mente ut foetus, in liquore amnii natans, per pellucidas membranas apparet.

Decidua reflexa hic adeo tenuis fuit, ut, nisi ad marginem placente, vix percipi posset.

Foetus, cuius crura fune umbilicali circum-vincta sunt, per se fatis est manifestus.

### F I G. III.

Corpus luteum ovario in finistro perfissum, ut appareat qualem sit ejus cavum, sub hoc tempus gestationis. Qualem se habeat in externa facie corporis lutei ovarii finistri, ibi cicatricula illa, in externa facie corporis lutei ovarii finistri, ibi cernitur, ubi stat litera C, in figuris prima et secunda.

## P L A T E XXXI.

T H R E E figures, from the same subject.

### F I G. I.

A back-view of the womb, so opened as to expose the outer surface of the decidua, and to shew the state of the neck of the womb.

The letters for explanation, except II, K, and L, are seen in fig. II.

AA The spermatic vessels.

BB The fimbriae.

CC The ovaries.

D The vagina laid open in its whole length.

E The os uteri protruberating into the vagina.

F The rugous passage through the neck of the womb, from which the vaginal cement had, by this time, fallen out.

GG The section of the substance of the cervix uteri.

HH The section of the substance of the womb; whence

II The posterior part of the whole substance of the womb, raised up from the decidua, and turned over the fundus of the womb.

K The decidua left upon the membranes, shewing its scabrous outer surface from which the womb was separated. It was crowded with injected vessels, especially veins; and in many places the wax was extravasated, which occasioned indistinctness.

L The transparent membranes, viz. amnion and chorion, covered with a very thin and transparent decidua reflexa, pushing down into the passage of the cervix uteri, where the decidua is wanting.

### F I G. II.

The same object, after the inverted portion of the womb had been cut off, and the decidua removed, to shew the foetus, in the liquor amnii, through the transparent membranes.

The decidua reflexa in this subject was so thin, that it was scarcely perceptible, except near the edge of the placenta.

The foetus, with the navel-string round its legs, requires no explanation.

### F I G. III.

The corpus luteum, in the left ovary, cut through, to shew its cavity at this period. The appearance of the cicatricula, upon the outside of the corpus luteum in the left ovary, is seen where the letter C stands in the first and second figures.

## T A B U L A XXXII.

FIGURÆ duæ, a decimo tertio cadavere, tertio mense prorsus exâctio.

### F I G. I.

- Uterus a parte antica apertus, unde foetus cervicisque uteri statutus in conspectum prodeunt.
- AA* Ligamenta lata.
  - BB* Ligamenta rotunda.
  - CC* Tubæ.
  - DD* Fimbriæ.
  - EE* Ovaria.
  - F* Vagina omnino aperta.
  - G* Os uterini labium posterius.
  - HH* Via per cervicem uterinam.
  - III* Sectio subfiantis uteri, portione quadam ovali excisa, ut contenta ejus sub examen venirent.
  - K* Membrane perfcilla.
  - L* Faciei internæ uteri pars.
  - M* Pars ifta decidua, qua inde separata fuit. Prope hanc literam cernitur foramen quoddam, (locus nimurum ubi decidua deest) via qua per cervicem uteri ducit, exaduorum fitum.
  - N* Decidua reflexa, nec non chorion et amnion, perfcilla.
  - O* Placenta parti posteriori uteri adhærefcens.
  - Foetus, cum collo fune umbilicali bis circundato, abunde patet.

### F I G. II.

- Uteri, placente et membranarum secundum longitudinem secchio, cum foetu juxta sito, funiculo autem umbilicali nondum dinducto.
- AA* Vaginæ facies interna.
  - BB* Os uteri perfcillum.
  - CC* Cervix uteri perfcilla.
  - DE* Via qua per cervicem ducit, cuius, in parte posteriori *E*, rugæ penniformes conficiuntur.
  - FFFF* Sectio fundi uteri, ubi conceptus sedem habebat.
  - GG* Sectio placente, qua retrofum adhaerat, ubi uterus, de quo agitur, preter morem crassus visus est.
  - HH* Placente superficies interna, amnio et chorio obtecta.
  - I* Uteri superficie interioris pars.
  - K* Pars parva decidua, inde separata.
  - LL* Decidua facies interna, sive cavum ipsam inter et deciduam reflexam.
  - M* Angulus prope marginem placente, ubi decidua lamella interior super chorion reflecitur, nempe ad deciduam reflexam faciendam.
  - N* Decidua reflexa facies externa; sive cavum, membranam iliam inter et deciduam.
  - O* Margines feciti decidua reflexa et chorii, qua inter se intime connectuntur.
  - P* Margo amnii foetus.

## PLATE XXXII.

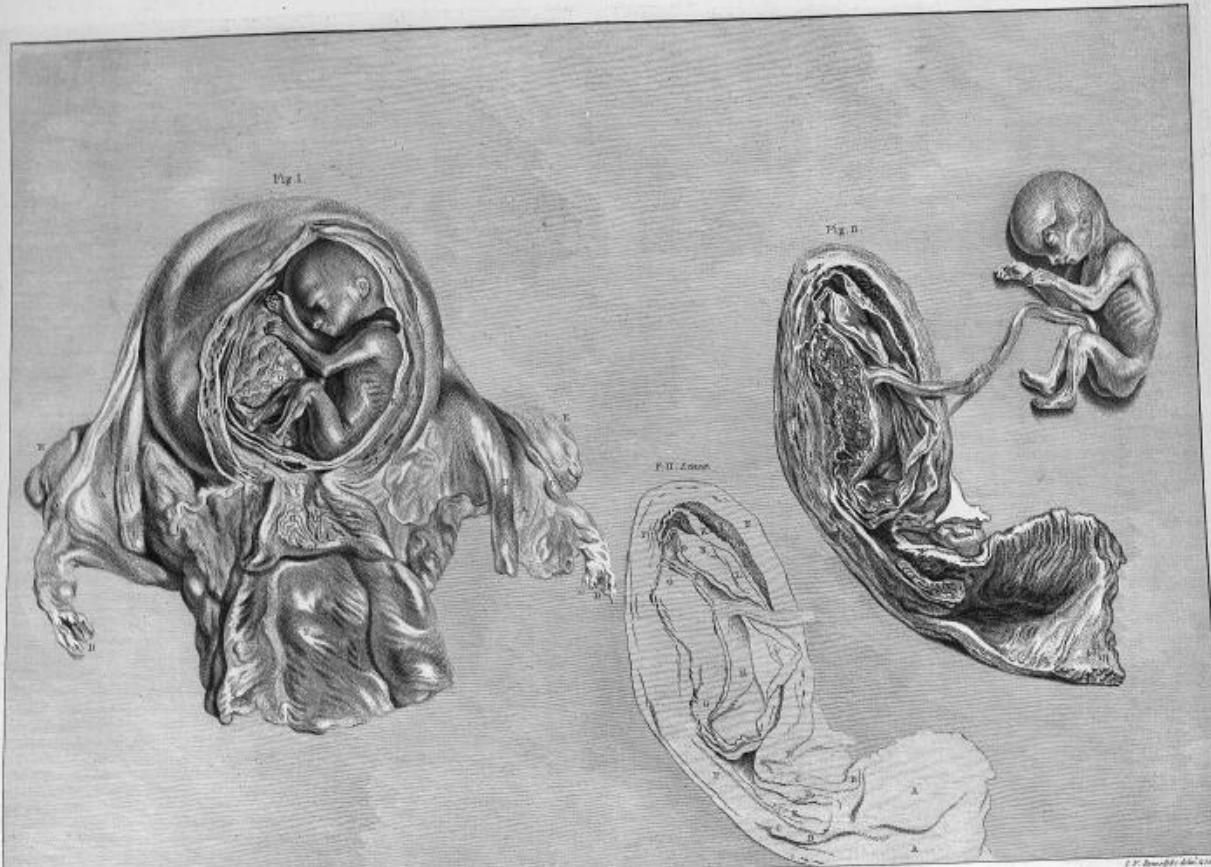

TWO figures from the thirteenth subject, at full three months.

### F I G. I.

- A fore-view of the womb opened, to shew the child, and the state of the cervix uteri.
- AA* The broad ligaments.
  - BB* The round ligaments.
  - CC* The tubes.
  - DD* The fimbriæ.
  - EE* The ovaries.
  - F* The vagina laid open.
  - G* The posterior lip of the os uteri.
  - HH* The passage through the cervix uteri.
  - III* The section of the substance of the womb, where an oval piece was taken out to shew its contents.
  - K* The membranes cut through.
  - L* Part of the internal surface of the womb.
  - M* That part of the decidua which was separated from it. Near this letter is the hole, or deficiency of the decidua opposite to the passage through the cervix uteri.
  - N* The decidua reflexa, chorion and amnion cut through.
  - O* The placenta, adhering to the posterior part of the womb.
  - The foetus, with two turns of the navel-string round its neck, requires no explanation.

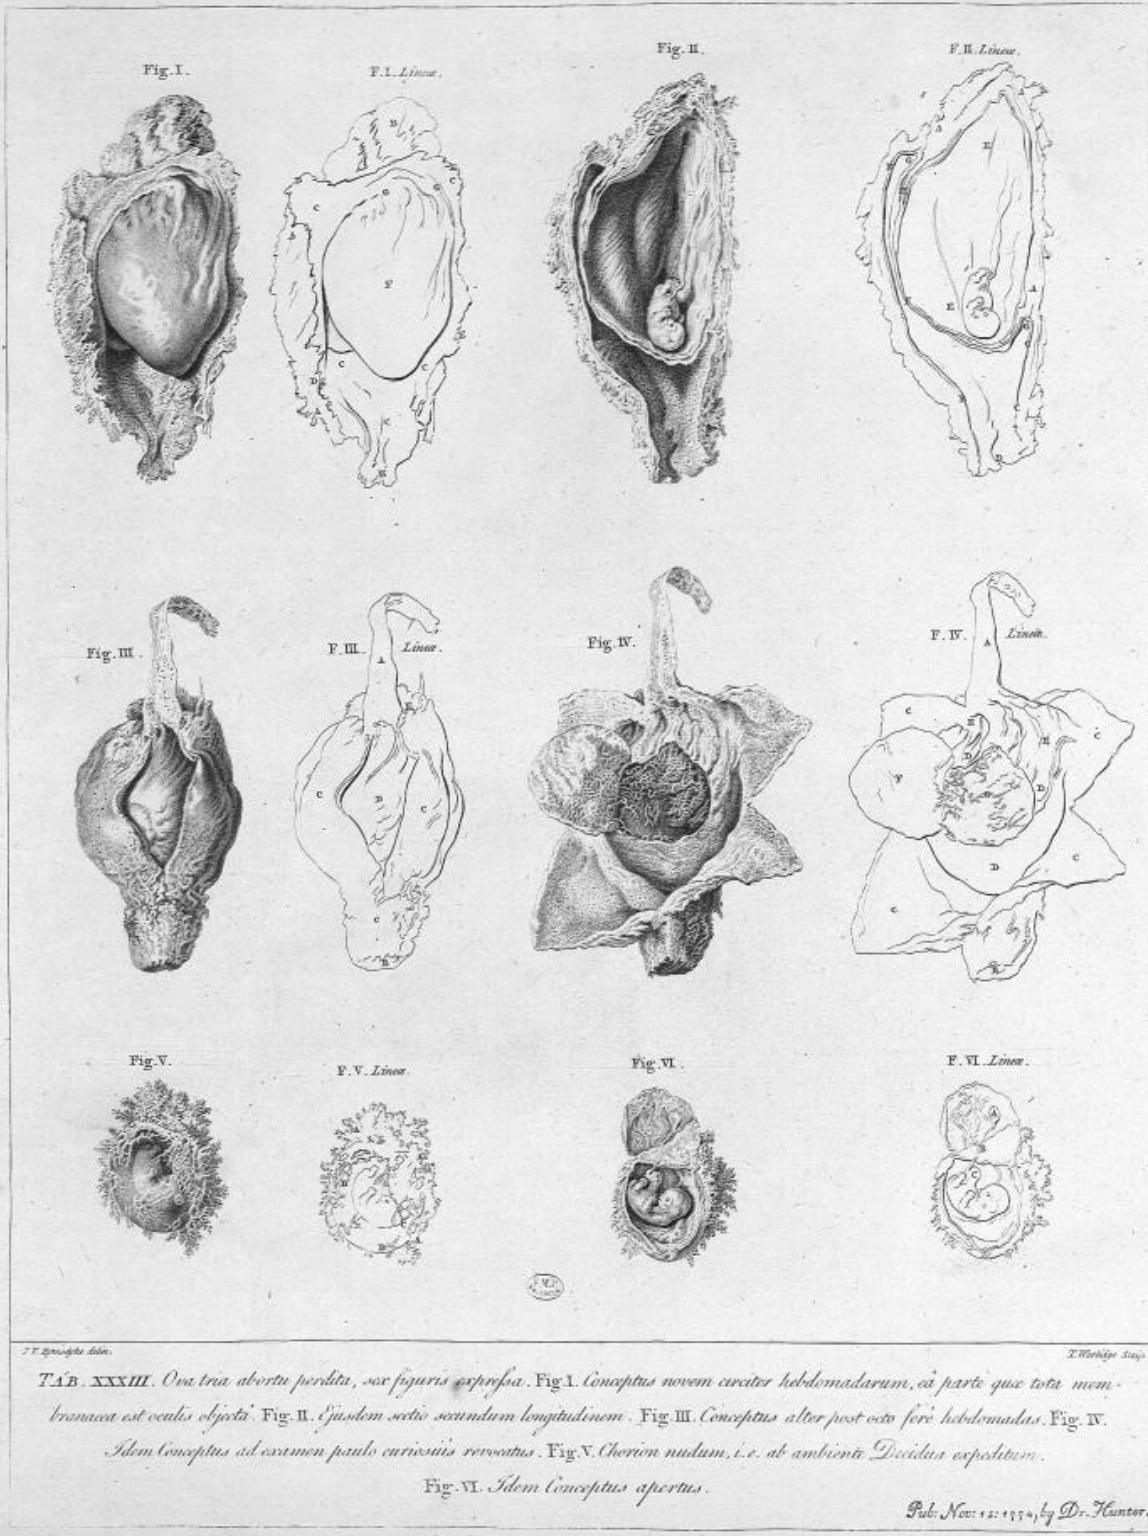

### F I G. II.

- A longitudinal section of the womb, placenta and membranes; with the child near it, but still attached by the navel-string.
- AA* The inside of the vagina.
  - BB* The os uteri cut through.
  - CC* The cervix uteri cut through.
  - DE* The passage through the cervix; in the posterior part of which *E*, the penniform rugæ are conspicuous.
  - FFFF* The section of the fundus uteri, in which the conception was lodged.
  - GG* The section of the placenta, which adhered backwards, where this womb was remarkably thick.
  - HH* The internal surface of the placenta, covered with the amnion and chorion.
  - I* Part of the inner surface of the womb.
  - K* A small part of the decidua separated from that inside of the womb.
  - LL* The internal surface of the decidua; or the cavity between the decidua and decidua reflexa.
  - M* The angle, near the edge of the placenta, where the inner layer of the decidua is turned over the chorion to form the decidua reflexa.
  - N* The outside of the decidua reflexa; or the cavity between that membrane and the decidua.
  - O* The cut edges of the decidua reflexa and chorion, which are intimately connected.
  - P* The cut edge of the amnion.

TAB. XXXII. *Dux a decimo tertio Cadavore Figura, tertio mense etatis. Fig. I. Uterus a parte anteriori patfactus, fictum cum Cervice Uterina contemplandum osticit. Fig. II. Idem Uterus secundum longitudinem, cum Placenta et membranis, divisus, adiacente etiam Ficta ac per funiculum umbilicalem adjuncto.*

(27)

## T A B U L A XXXIII.

OVA tria abortiva, sex figuris expressa.

### F I G. I.

Ovum nonæ circiter hebdomadarum abortivum, ab ista scilicet parte qua membranacea est adspicuum. Decidua lacerata est, et aliquantulum revoluta, ut decidua reflexa lœvis et opaca in conspectum prodiret.

A A Deciduae ab utero separatae facies externa scabra.

B Facies externa portiunculae cuiusdam placentæ, cuius reliqua pars fedem suam exadversum habebat.

C C C C Deciduae facies interna cibriformis, quæ primis mensibus graviditatis membranis inclusis non adhaerescit.

D D D D Deciduae margo laceratus, qui in marginem E E E membranae ejusdem cursum suum tenuerat.

F Decidua reflexa per faciem externam chorii diffusa.

G G Angulus partis reflexæ, ad marginem scilicet placentæ, ubi lamella interior deciduae in chorion reflectitur, simili fere modo quo lamella interior pericardii reflectitur ad superficiem externam cordis obtegendarum.

H Extrema pars deciduae ad cervicem uteri.

### F I G. II.

Ejusdem sectio a vertice ad imum usque.

A A A Sectio placentæ, quam superficie superiori et posteriori uteri adhaesere supponendum est.

B B Deciduae partis anterioris sectio.

C C Deciduae partis posterioris sectio.

D D Pars extrema deciduae ad cervicem uteri.

E E Amnii cavum, in quo fetus, ope funiculi tenuissimi umbilicalis, a facie interna placentæ suspensus.

F Sectio trium membranarum, scilicet amnii, chorii et deciduae reflexæ, quæ non solum sunt contiguae, sed et fibi invicem adhaerescunt.

G G Angulus ad marginem placentæ, ubi lamella interior deciduae in faciem externam chorii reflectitur.

H Hic tres istæ membranae paululum sejunguntur, ut situs earum, respectu habitu ad placentam, manifestius appearat.

### F I G. III.

Ovum octo circiter hebdomadarum abortivum. Pars quædam exigua deciduae excisa est, et sursum reflexa, ut cavum inter eam et cæteras membranas cerneretur.

A A Deciduae pars exigua excisa.

B B Conceptus pars ubi deest decidua, exadversum scilicet aditus per uteri cervicem ducenti.

C C C Deciduae superficies externa.

D D Decidua reflexa obtegens chorion et amnion, quæ membranæ se protendentes cavum deciduae adimplent.

E E Partis superioris placentæ facies externa.

### F I G. IV.

Idem ovum, decidua jam incisione decussatim aperta, angulis quatuor re-volutis deciduaeque reflexæ porzione rotunda cultro sublata et devoluta, nempe ut vascula in superficie externa chorii in conspectum prodirent.

A A B. Vide fig. III.

C C C C Facies interna quatuor angularum in quos decidua cruciali incisione fuerat divisa.

D D D Decidua reflexa cæteras membranas invelliens.

E E Angulus ad placentæ marginem, ubi lamella interior deciduae protrudit supra faciem externam chorii, nomenque deciduae reflexæ obtinet.

F F Decidua reflexa portio rotunda, ex facie externa chorii cultro anatomico sublata et devoluta.

G G Chorion cum vas suis hirsutis expositum. Vasa illa deciduae reflexæ arcite adhaerent, et eorum nonnulla una cum membrana illa abscessa sunt.

### F I G. V.

Ovum eodem fere tempore abortu separatum, conflans ex chorio solo, cum vasis et contentis ejus; quippe decidua, vel pars secundarum uterina, in utero remanebat.

A A A Væforum hirsutorum rami majores et frequentiores, ex quadam parte superficii externæ chorii emergentes, et cum decidua, vel parte uterina, ad placentam confidentia se commiscentes.

B B Chorii ea portio que postea membrana uniformis et pellucida evadit; vas paucioribus, subtilioribus, fluitantibus, quæ in decidua reflexa evanescent, abundat: per eam conficiuntur embryo.

C C Vesicula umbilicalis in facie externa amnii per chorion conspecta: filum exalbidum (reliquia arterie et venæ) ab ea ad umbilicum embryonis transit.

### F I G. VI.

Idem ovum apertum. Membranæ anticæ parti insidentibus a placenta abscissis et reflexis, dilinéte conficiuntur embryo.

A A Vesicula umbilicalis, ex qua

B B Reliquæ arterie et venæ, filo albo similes, ad umbilicum embryonis transiunt. Intestinorum gyri quidam in principio funis umbilicalis includuntur.

## P L A T E XXXIII.

SIX figures of three different abortions.

### F I G. I.

An abortion, of about nine weeks, seen on that side which is membranous. The decidua is torn, and turned somewhat aside, to shew the smooth and opaque decidua reflexa.

A A The rough, external surface of the decidua, which exfoliated from the womb.

B B The outside of a small portion of the placenta, the rest of which was situated on the back-part of this object.

C C C C The internal cibriform surface of the decidua, which, in the first months of pregnancy, does not adhere to the membranes which it encloses.

D D D D The lacerated edge of the decidua which had been continued into the edge E E E of the same membrane.

F F The decidua reflexa spread over the outside of the chorion.

G G The angle of reflection at the edge of the placenta, where the inner layer of the decidua is turned over the chorion; much in the same manner as the inner lamella of the pericardium is reflected, to cover the outer surface of the heart.

H H The termination of the decidua at the cervix uteri.

### F I G. II.

A vertical section of the same.

A A A The section of the placenta; which, we may suppose, had adhered to the upper and back-part of the womb.

B B The section of the anterior portion of the decidua.

C C The section of the posterior portion of the decidua.

D D The termination of the decidua at the cervix uteri.

E E The cavity of the amnion, in which the embryo hangs by a slender navel string, from the infide of the placenta.

F F The section of the three membranes, which are not only contiguous, but adhere to one another, viz. the amnion, the chorion and the decidua reflexa.

G G The angle, at the edge of the placenta where the inner layer of the decidua is reflected over the outside of the chorion.

H H Here those three membranes are a little separated, to shew their course at the placenta.

### F I G. III.

An abortion of about eight weeks. A small flap of the decidua is cut out, and turned up, to shew the cavity between it and the other membranes.

A A The cut flap of the decidua.

B B The part of the conception where there is no decidua; viz. opposite to the passage through the cervix uteri.

C C C The external surface of the decidua.

D D The decidua reflexa covering the chorion and amnion, which project and fill up the cavity of the decidua.

F F The outside of the upper part of the placenta.

### F I G. IV.

The same, when the decidua had been opened by a crucial incision, and the four angles had been turned off, and then a round piece of the decidua reflexa dissected off, and turned to one side, to shew the loose vessels on the outside of the chorion.

A. B. See fig. III.

C C C C The infide of the four angles or flaps into which the decidua was reduced by a crucial incision.

D D D The decidua reflexa, covering the other membranes.

E E The angle, at the edge of the placenta where the interior lamella of the decidua is continued over the outside of the chorion, forming the decidua reflexa.

F F A round portion of the decidua reflexa dissected from the outside of the chorion and turned aside.

G G The chorion, with its shaggy vessels, laid bare. These vessels adhered firmly to the decidua reflexa, and parts of them were cut off with that membrane.

### F I G. V.

An abortion of the same age, consisting of the chorion only, with its vessels and contents; that is, without the decidua, or uterine part of the secundines.

A A A The larger and more crowded branches of the shaggy vessels which shoot from the external surface of one part of the chorion, to mix with the decidua, or uterine part, to form the placenta.

B B That portion of the chorion which afterwards becomes the uniform transparent membrane. It is covered with fewer and more delicate floating vessels, which lose themselves in the decidua reflexa. The embryo is seen through it.

C C The vesicula umbilicalis on the outside of the amnion, seen through the chorion; with a whitish thread, (the remains of an artery and vein) leading from it, towards the navel of the embryo.

### F I G. VI.

The same opened. The membranes, which were at the fore-part, being cut from the placenta, and turned up, the embryo is distinctly seen.

A A The vesicula umbilicalis, from which B, the remains of an artery and vein, in the form of a white thread, pass to C, the navel of the embryo, with some turns of the intestines lodged in the beginning of the navel string.

## T A B U L A XXXIV.

### F I G. I.

**O**VUM, scilicet chorion, cum omnibus ejus contentis, quintam, ut licet conjicere, circiter hebdomadam. Literæ, antea usitate, ad dignoscendas partes, minime desiderantur. Maculae que maxime fusce sunt, sanguinis coagulati reliquias parvas repräsentant. In medio, globi inflati, conspicitur amnion, per quod fetus indistincte apparet. Ovum ipsum haud paululum mole sua complanatum expallumque fuit, coram piclore in patella dum jacebat.

### F I G. II.

Idem ovum præparatum, magna fatis parte chorii abscissa, amnioque cum fetu inclusu, ut partes circa umbilicum ejus conspicerentur, in latus reflexo, vitri optici ope, ut partes minores magis distinque possent conspicere, amplificatum fuit. Vasa hirsuta fluitantia, ex facie externa chorii exuenientia, per se fatis patent.

**A** Spatium inter chorion et amnion. Hoc refertum erat gelatina tenera, adeo pellucida ut vix cerni posset; unde arteriae venae ramosa, sanguine rubro impletæ, in facie interna placenta distincte per eam conspiciebantur.

**B** Amnion liquore pellucido colorisque experie, purissima veluti aqua fontana, distendebatur; per quem fetus partes minores apparabant.

**C** Vesicula umbilicalis humore difensa: neque amnio illa, neque chorio connexa fuit; gelatina autem tenera circumdata, umbilico fetus per arteriam et venam, quasi per pediculum, adnexa; quibus guidem vasis tanta inter se vicinitas fuit, ut vas unum sanguine rubro impletum, et ramos in vesiculam umbilicalem folam emittens, viderentur. Caput fetus trunco ejus longius fuit; brachia et crura non nisi per paullum emicuerunt; vescera abdominis nondum fuerant vescita; pars corum magis fusca hepatis fuit: fune umbilicale nondum orto, fetus facie interchorio et amnii, quæ eo loci contigua erant, medio abdomine, adnectebatur.

### F I G. III.

Ovum integrum, quartæ hebdomadæ, ut licet conjicere. Ovi pars superior, latior et plana, fuscus fuit, textura tenera, per deciduum folam formatus; huic ad angulos superiores foramen dentatum utrinque fuit, ubi tubas intrafæcile licebat; et ad evi partem inferiorem portio crassa anguitaque ex membranis omnibus contentaque corum constituit.

### F I G. IV.

Ejusdem ovi, sectione a vertice ad innum ducta aperti, facies interna. Ovum totum adhuc fundi uteri formam triangularem retinebat.

Pars lata superior, deciduum faciem internam leviorum, cribro similem, ostendit; et pars angusta inferior, omnium membranarum sectionem cavumque in conspectu ponit. Fetus primordia omnino soluta fuerant. Amnion a chorio sejuncta fuerat, et in cavo ejus fluitabat. Ex duobus ab eodem centro circulis albis, interior est chorii sectio; cuius in facie externa stratum spongiosum, cui vasa ex chorio se immittunt, cernitur: circulus albus exterior, ad partem inferiorem, deciduum, placentam obtegentem, et ad partem superiorem deciduum reflexam repræsentat.

### F I G. V.

Ovum integrum tertiam circiter hebdomadam.

**A** Seta in cavu ovi trajecta per foramen ad utrumque angulum superiore, quod scilicet tuba fallopianæ extremitatem esse conjicere licet.

**B** Eadem setæ per foramen majus exentes ad angulum inferiorem, quod cervici uteri exadversum esse ponimus.

**C** Hydatis, molis admodum exiguae, per deciduum sepe projiciens, et filamenta gracilia ramosa ex superficie sua emittentes: chorion esse, vix dubitandum.

### F I G. VI.

Idem ovum, maxima parte parietis anterioris excisa.

**A, B, C.** Vide fig. V.  
Manifestum est deciduum, hocce in ovo, membranam fusile densam, texture glutinosa, quo totu cavo triangulari fundi uteri, tanquam vestimentum, adhaeret; conflabat etiam tubas in facie ejus interna fusile terminatas; chorion inter duplice ejus membranam fusile, vel substantiam ejus circumdatum; parique pulsu cum incremento chorii, procedente uteri gelatione, cavum deciduum exordiat, lamellam ejus interiorem (five deciduum reflexam) diffundens, donec tandem, delecto cavo, lamella illa interna facie interiori decidui fusillet contigua. Progressus hic, de quo agitur, mutationis planius intellegetur, si proxime his figuræ inter se confringantur, ordine earum inverso, primo scilicet nonam, deinde octavam, et postremo septimam.

### F I G. VII.

Status ovi (qualiter scilicet animo licet concipere) in utero matre præfervis, ubi chorion, decidua reflexa obtectum, per plurimum spatii in cavum decidua porrigitur.

**A** Decidua reflexa, ubi certo temporis progressio, lamellam extenam duplice membrana, spongiosum vel noctum chorion vulgo dicitur, consuevit.

**B** In hoc loco, decidua parietis placenta, uterina dictam consuevit.

**C** Amni oevum.—D Cavum, vel spatium, amnion inter et chorion.

**E** Cavum decidua, vel spatium membranarum illam inter et deciduum reflexam.

**F** Tube in faciem internam decidua sepe aperiuntur.

**G** Cervix uteri nullam partem ovi continens.

### F I G. VIII. et IX.

Duæ hæ figuræ, in hoc fere solo ab ultima differunt; nimurum chorii in decidua cavum proiecione eo minor est, quo ovum æstatis minus.

## P L A T E XXXIV.

### F I G. I.

**A** Conception, viz., the chorion with all its contents, supposed to be about five weeks. The parts will be understood without letters of reference. Some of the darkest spots represent the little remnants of clotted blood. In the middle of the amnion is seen like a round ball, through which the fetus appears indistinctly. The whole object was considerably flattened and spread out, by its own weight, as it lay in a little dish before the painter.

### F I G. II.

The same conception, prepared by cutting away a considerable part of the chorion, and turning aside the amnion with the enclosed fetus, that the parts about the navel might be seen. It is considerably magnified, to shew the small parts more distinctly.

The shaggy floating vessels, which shoot from the outer surface of the chorion, require no explanation.

**A** The space between the chorion and amnion. This was filled with a tender jelly, so transparent as to be almost invisible; whence, the branching arteries and veins, filled with red blood, upon the inside of the placenta, were distinctly seen through it.

**B** The amnion distended with a liquor as transparent and void of colour as the clear water; through which the minute parts of the fetus were distinctly seen.

**C** The vesicula umbilicalis, distended with a fluid. It was neither attached to the amnion, nor the chorion; surrounded with the tender jelly; connected, as by a pedicle, to the navel of the fetus by an artery and a vein; which lay close together, as to appear like one vessel filled with red blood, and dispersing its branches on the vesicula umbilicalis alone.

The head of the fetus was longer than the trunk; the arms and legs had shot out a little way: the abdominal viscera were not covered: the darker part of these was the red liver: there being no navel-string, the fetus was attached at its abdomen to the inside of the amnion, and of the chorion, which were contiguous at that place.

### F I G. III.

An entire conception supposed to be in the fourth week. The broad and flat upper part of the object was a bag of a tender texture, formed of the decidua only, with a ragged perforation at each of the two upper angles, where the tubes were supposed to have entered; and the thick and narrow portion, at the lower part of the object, consisted of all the membranes and their contents.

### F I G. IV.

The inside of the same object, laid open by a vertical section. The whole conception retained still the triangular shape of the fundus uteri. The broad upper part shews the smoother and cribriform internal surface of the decidua; and the narrow part below shews the section and cavity of all the membranes. The rudiments of the fetus were dissolved. The amnion had separated from, and lay loose in the cavity of the chorion. Of the two, concentric, white circles, the interior is the section of the chorion; upon the outside of which is seen the stratum of spongy substance into which the vessels shoot from the chorion. The outer white circle represents, at its lower part, the decidua covering the placenta; and, at its upper part, the decidua reflexa.

### F I G. V.

A compleat conception, of about three weeks.

**A** A brittle puffed into the cavity of the conception, through a hole at each of the upper angles, which was supposed to be the termination of the fallopian tube.

**B** The same brittles coming out through a larger hole at the lower angle, supposed to be opposite to the cervix uteri.

**C** A small hydatid, projecting through the substance of the decidua, which had slender branching filaments shooting from the surface, supposed to be the chorion.

### F I G. VI.

The same conception, after a considerable portion of its fore-part had been cut out.

**A, B, C.** See fig. V.  
It plainly appears that, the decidua, in this case, was a thick membrane (of a gelatinous texture) which had lined and adhered to the whole triangular cavity of the fundus uteri; that, the tubes terminated on its internal surface; that, the chorion was lodged in its duplicature, or was surrounded with its substance; and that, in proportion as the chorion would have been extended, in the process of gestation, it would have encroached upon the cavity of the decidua, stretching its interior lamella (or decidua reflexa) till at length the cavity being obliterated, that interior lamella would have come into contact with the inside of the decidua. This progressive change will be more clearly understood by comparing the three following figures in the inverted order, viz. IX, VIII, and VII.

### F I G. VII.

The more advanced state of a supposed conception in the womb; when the chorion, covered by the decidua reflexa, is stretched a great way out into the cavity of the decidua.

**A** The section of the decidua where, in process of time, it would constitute the external lamella of the double membrane which has been commonly named the spongy or false chorion.

**B** Here the decidua constitutes the interior part of the placenta.

**C** The cavity of the amnion.—D The cavity or space between the amnion and chorion.

**E** The cavity of the decidua, or the space between that membrane and the decidua reflexa.

**F** The tubes, opening upon the inside of the decidua.

**G** The cervix uteri, containing no part of the conception.

### F I G. VIII. and IX.

These two figures differ from the preceding almost in this respect alone, that the projection of the chorion into the cavity of the decidua is left in proportion as the conception is younger.
