Quæstio Quodlibetaria agitanda In Scholis Medicorum die Jouis 15° februarii

Christophoro Maſſin Moderatore Prudentiſſimo.

An Idem Calor noſtri ortus et Interitus ſit Cauſa ?

Facultas opificis diuinioris cuiuſdam originis [illegible] ex principibus qualitatibus una cum humoribus quatuor ([illegible] ſanguine, pituita) colore et conſiſtentia et caliditate et frigiditate inuicem differentibus, mixtura et copia probe permiſtis, hominem (animalium omnium perfectiſſimum) [illegible] atque conſtitutionis [illegible]. attamen quia mutationibus tum internis tum externis obnoxius eſt, [illegible] momento ſibi ſimilis durat. Etenim non ſolum [illegible] ambientis mortalibus vitæ et morborum [illegible] author, atque [illegible] nobis ingenita et a principiis noſtræ generationis humidis, temperamentoque diuerſis orta, [illegible] temperamentum (quatuor primarum qualitatum conſtitutæ) [illegible] corrumpunt.

Prima igitur [illegible] corporis inteſtina corruptio ſiccitas eſt, quam calor nobis et [illegible] actionum [illegible] author, quique [illegible] ad mortem uſque [illegible], humidum primigenium [illegible] abſumendo parit. [illegible] ſiccitas a vita [illegible] : unde a prima genitura corpus humidius, ad ſenium uſque, ſiccius [illegible] febre et dolore [illegible] fitque ex ſenio marcor.

Altera autem quæ in corporibus fit mutatio, triplicis eſt ſubſtantiæ [illegible] continuo [illegible] (cuius in [illegible] major eſt) diſſipatio. [illegible] quod effluxit ſuppleatur, neceſſarium eſt alimentum [illegible] contrarium, illudque non [illegible], non æquale, ſed [illegible] calidum ſuperabundat, et quoniam animal nutritur ſubſtantia perſimili [illegible] quæ effluxit, cibo non [illegible], ſed [illegible] (quem labor [illegible]) [illegible] ſubſtantiæ effluxum [illegible], quo [illegible], ita [illegible] humidorum ſubſtantiam [illegible] arteriarum motu perpetuo et reſpiratione [illegible], [illegible] ſubſtantiæ modum [illegible].

Cum vero non omnis ciborum ſubſtantia in nutrimentum abeat, ſed quod [illegible] eſt relinquatur, excrementorum [illegible] neceſſario, quæ et qualitate, et quantitate [illegible], ſi [illegible] putredinem, [illegible] monentur, non modo [illegible] rigoremque, (qui ſola [illegible] et remiſſione [illegible]) febrium [illegible] ſigna, ſed et febrem [illegible] morborum parium. Ergo ſiue ſit calidum, ſiue frigidum ſit, [illegible] oportet. [illegible] non [illegible] excrementorum a [illegible].

Corpus igitur noſtrum ſiue rarum ſalubriùs [illegible], ſiue [illegible] morbo (qui ſi [illegible], ætati, temporique congruens ſit, minus periculoſus eſt [illegible]: atque [illegible] morborum (quorum alii ad alia tempora [illegible], et mali [illegible]) [illegible] ſola, contrariis [illegible], ſiue [illegible] intra ſanitatis latitudinem, tum [illegible], tum contrarii [illegible] [illegible] actionis [illegible] (et [illegible] in quibus infantes [illegible] ætatibus præſtant, et [illegible], ad quas [illegible] adoleſcentium ætas [illegible] eſt aptiſſima) ſimilibus conſeruentur, tamen propter [illegible] calorem [illegible] corpora, et corrumpentia mouentur.

Ergo Idem Calor noſtri ortus et Interitus Cauſa eſt.

F.M.P. BIBLIOTHÈQUE
